[33925] Another function of GAM281 is therefore inhibition of KIAA1040 (Accession XP_051091.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1040.

[33926] KIAA1041 (Accession NP_055762.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1041 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by KIAA1041, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1041 BINDING SITE, designated SEQ ID:3653, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33927] Another function of GAM281 is therefore inhibition of KIAA1041 (Accession NP_055762.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1041.

[33928] KIAA1052 (Accession NP_055771.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1052 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA1052, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1052 BINDING SITE, designated SEQ ID:919, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33929] Another function of GAM281 is therefore inhibition of

KIAA1052 (Accession NP_055771.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1052.

[33930] KIAA1054 (Accession XP_043493.5) is another GAM281 target gene, herein designated TARGET GENE. KIAA1054 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1054, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1054 BINDING SITE, designated SEQ ID:14832, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33931] Another function of GAM281 is therefore inhibition of KIAA1054 (Accession XP_043493.5) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1054.

[33932] KIAA1115 (Accession NP_055746.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1115 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1115, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1115 BINDING SITE, designated SEQ ID:9842, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33933] Another function of GAM281 is therefore inhibition of KIAA1115 (Accession NP_055746.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1115.

[33934] KIAA1126 (Accession XP_050325.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1126 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1126, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1126 BINDING SITE, designated SEQ ID:10583, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33935] Another function of GAM281 is therefore inhibition of KIAA1126 (Accession XP_050325.1) . Accordingly, utilities

of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1126.

[33936] KIAA1128 (Accession NP_061872.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1128 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1128, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1128 BINDING SITE, designated SEQ ID:5783, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33937] Another function of GAM281 is therefore inhibition of KIAA1128 (Accession NP_061872.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1128.

[33938] KIAA1143 (Accession XP_044014.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1143 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1143, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1143 BINDING SITE, designated SEQ ID:7385, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33939] Another function of GAM281 is therefore inhibition of KIAA1143 (Accession XP_044014.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1143.

[33940] KIAA1155 (Accession XP_030864.2) is another GAM281 target gene, herein designated TARGET GENE. KIAA1155 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1155, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1155 BINDING SITE, designated SEQ ID:2664, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33941] Another function of GAM281 is therefore inhibition of KIAA1155 (Accession XP_030864.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with KIAA1155.

[33942] KIAA1170 (Accession XP_045907.2) is another GAM281 target gene, herein designated TARGET GENE. KIAA1170 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1170, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1170 BINDING SITE, designated SEQ ID:10162, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33943] Another function of GAM281 is therefore inhibition of KIAA1170 (Accession XP_045907.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1170.

[33944] KIAA1185 (Accession NP_065761.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1185 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1185, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of KIAA1185 BINDING SITE, designated SEQ ID:5755, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33945] Another function of GAM281 is therefore inhibition of KIAA1185 (Accession NP_065761.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1185.

[33946] KIAA1193 (Accession XP_041843.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1193 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1193, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1193 BINDING SITE, designated SEQ ID:17517, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33947] Another function of GAM281 is therefore inhibition of KIAA1193 (Accession XP_041843.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA1193.

[33948] KIAA1198 (Accession NP_065765.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1198 BINDING SITE1 through KIAA1198 BINDING SITE5 are target binding sites found in untranslated regions of mRNA encoded by KIAA1198, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1198 BINDING SITE1 through KIAA1198 BINDING SITE5, designated SEQ ID:13749, SEQ ID:16088, SEQ ID:12389, SEQ ID:16471 and SEQ ID:12478 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33949] Another function of GAM281 is therefore inhibition of KIAA1198 (Accession NP_065765.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1198.

[33950] KIAA1210 (Accession XP_172801.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1210 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1210, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1210 BINDING SITE, designated SEQ ID:9144, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33951] Another function of GAM281 is therefore inhibition of KIAA1210 (Accession XP_172801.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1210.

[33952] KIAA1257 (Accession XP_031577.2) is another GAM281 target gene, herein designated TARGET GENE. KIAA1257 BINDING SITE1 through KIAA1257 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by KIAA1257, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1257 BINDING SITE1 through KIAA1257 BINDING SITE3, designated SEQ ID:8196, SEQ ID:11523 and SEQ ID:9032 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33953] Another function of GAM281 is therefore inhibition of KIAA1257 (Accession XP_031577.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1257.

[33954] KIAA1268 (Accession XP_291055.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1268 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1268, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1268 BINDING SITE, designated SEQ ID:3236, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33955] Another function of GAM281 is therefore inhibition of KIAA1268 (Accession XP_291055.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1268.

[33956] KIAA1273 (Accession XP_300760.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1273 BINDING SITE is a target binding site found in the 5` un-

translated region of mRNA encoded by KIAA1273, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1273 BINDING SITE, designated SEQ ID:7374, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33957] Another function of GAM281 is therefore inhibition of KIAA1273 (Accession XP_300760.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1273.

[33958] KIAA1287 (Accession NP_065799.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1287 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1287, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1287 BINDING SITE, designated SEQ ID:9573, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33959] Another function of GAM281 is therefore inhibition of

KIAA1287 (Accession NP_065799.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1287.

[33960] KIAA1393 (Accession XP_050793.2) is another GAM281 target gene, herein designated TARGET GENE. KIAA1393 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1393, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1393 BINDING SITE, designated SEQ ID:10123, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33961] Another function of GAM281 is therefore inhibition of KIAA1393 (Accession XP_050793.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1393.

[33962] KIAA1443 (Accession NP_065885.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1443 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1443, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1443 BINDING SITE, designated SEQ ID:15171, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33963] Another function of GAM281 is therefore inhibition of KIAA1443 (Accession NP_065885.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1443.

[33964] KIAA1456 (Accession XP_040100.3) is another GAM281 target gene, herein designated TARGET GENE. KIAA1456 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1456, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1456 BINDING SITE, designated SEQ ID:5529, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33965] Another function of GAM281 is therefore inhibition of KIAA1456 (Accession XP_040100.3) . Accordingly, utilities

of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1456.

[33966] KIAA1465 (Accession XP_027396.4) is another GAM281 target gene, herein designated TARGET GENE. KIAA1465 BINDING SITE1 and KIAA1465 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1465, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1465 BINDING SITE1 and KIAA1465 BINDING SITE2, designated SEQ ID:18992 and SEQ ID:18838 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33967] Another function of GAM281 is therefore inhibition of KIAA1465 (Accession XP_027396.4) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1465.

[33968] KIAA1493 (Accession XP_034415.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1493 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by KIAA1493, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1493 BINDING SITE, designated SEQ ID:15045, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33969] Another function of GAM281 is therefore inhibition of KIAA1493 (Accession XP_034415.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1493.

[33970] KIAA1508 (Accession XP_290952.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1508 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1508, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1508 BINDING SITE, designated SEQ ID:8820, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33971] Another function of GAM281 is therefore inhibition of

KIAA1508 (Accession XP_290952.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1508.

[33972] KIAA1518 (Accession XP_170889.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1518 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KIAA1518, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1518 BINDING SITE, designated SEQ ID:13383, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33973] Another function of GAM281 is therefore inhibition of KIAA1518 (Accession XP_170889.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1518.

[33974] KIAA1530 (Accession XP_042661.5) is another GAM281 target gene, herein designated TARGET GENE. KIAA1530 BINDING SITE1 through KIAA1530 BINDING SITE3 are tar-

get binding sites found in untranslated regions of mRNA encoded by KIAA1530, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1530 BINDING SITE1 through KIAA1530 BINDING SITE3, designated SEQ ID:4028, SEQ ID:12345 and SEQ ID:15284 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33975] Another function of GAM281 is therefore inhibition of KIAA1530 (Accession XP_042661.5) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1530.

[33976] KIAA1550 (Accession XP_039393.3) is another GAM281 target gene, herein designated TARGET GENE. KIAA1550 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1550, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1550 BINDING SITE, designated SEQ ID:3790, to the nucleotide sequence of GAM281 RNA, herein designated

GAM RNA, also designated SEQ ID:278.

[33977] Another function of GAM281 is therefore inhibition of KIAA1550 (Accession XP_039393.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1550.

[33978] KIAA1559 (Accession XP_054472.2) is another GAM281 target gene, herein designated TARGET GENE. KIAA1559 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1559, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1559 BINDING SITE, designated SEQ ID:4029, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33979] Another function of GAM281 is therefore inhibition of KIAA1559 (Accession XP_054472.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1559.

[33980] KIAA1571 (Accession XP_027744.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1571

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1571, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1571 BINDING SITE, designated SEQ ID:14154, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33981] Another function of GAM281 is therefore inhibition of KIAA1571 (Accession XP_027744.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1571.

[33982] KIAA1615 (Accession NP_066002.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1615 BINDING SITE1 and KIAA1615 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1615, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1615 BINDING SITE1 and KIAA1615 BINDING SITE2, designated SEQ ID:8549 and SEQ ID:10111 respectively, to the nucleotide sequence of

GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33983] Another function of GAM281 is therefore inhibition of KIAA1615 (Accession NP_066002.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1615.

[33984] KIAA1671 (Accession XP_037809.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1671 BINDING SITE1 and KIAA1671 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1671, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1671 BINDING SITE1 and KIAA1671 BINDING SITE2, designated SEQ ID:7194 and SEQ ID:17191 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33985] Another function of GAM281 is therefore inhibition of KIAA1671 (Accession XP_037809.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA1671.

[33986] KIAA1679 (Accession XP_046570.3) is another GAM281 target gene, herein designated TARGET GENE. KIAA1679 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1679, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1679 BINDING SITE, designated SEQ ID:5094, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33987] Another function of GAM281 is therefore inhibition of KIAA1679 (Accession XP_046570.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1679.

[33988] KIAA1712 (Accession XP_041497.2) is another GAM281 target gene, herein designated TARGET GENE. KIAA1712 BINDING SITE1 and KIAA1712 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by KIAA1712, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the

complementarity of the nucleotide sequences of KIAA1712 BINDING SITE1 and KIAA1712 BINDING SITE2, designated SEQ ID:1142 and SEQ ID:14165 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33989] Another function of GAM281 is therefore inhibition of KIAA1712 (Accession XP_041497.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1712.

[33990] KIAA1712 (Accession NP_085136.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1712 BINDING SITE1 and KIAA1712 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by KIAA1712, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1712 BINDING SITE1 and KIAA1712 BINDING SITE2, designated SEQ ID:1142 and SEQ ID:14165 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33991] Another function of GAM281 is therefore inhibition of

KIAA1712 (Accession NP_085136.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1712.

[33992] KIAA1724 (Accession XP_040280.2) is another GAM281 target gene, herein designated TARGET GENE. KIAA1724 BINDING SITE1 and KIAA1724 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1724, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1724 BINDING SITE1 and KIAA1724 BINDING SITE2, designated SEQ ID:14630 and SEQ ID:15040 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33993] Another function of GAM281 is therefore inhibition of KIAA1724 (Accession XP_040280.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1724.

[33994] KIAA1737 (Accession NP_219494.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1737

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1737, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1737 BINDING SITE, designated SEQ ID:10602, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33995] Another function of GAM281 is therefore inhibition of KIAA1737 (Accession NP_219494.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1737.

[33996] KIAA1775 (Accession NP_149091.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1775 BINDING SITE1 and KIAA1775 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1775, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1775 BINDING SITE1 and KIAA1775 BINDING SITE2, designated SEQ ID:17949 and SEQ ID:1618 respectively, to the nucleotide sequence of

GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33997] Another function of GAM281 is therefore inhibition of KIAA1775 (Accession NP_149091.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1775.

[33998] KIAA1784 (Accession NP_115820.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1784 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1784, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1784 BINDING SITE, designated SEQ ID:11058, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[33999] Another function of GAM281 is therefore inhibition of KIAA1784 (Accession NP_115820.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1784.

[34000] KIAA1822 (Accession XP_041566.2) is another GAM281

target gene, herein designated TARGET GENE. KIAA1822 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1822, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1822 BINDING SITE, designated SEQ ID:10095, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34001] Another function of GAM281 is therefore inhibition of KIAA1822 (Accession XP_041566.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1822.

[34002] KIAA1827 (Accession XP_290834.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1827 BINDING SITE1 and KIAA1827 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1827, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1827 BINDING SITE1 and KIAA1827 BINDING SITE2, designated SEQ ID:2143 and

SEQ ID:12636 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34003] Another function of GAM281 is therefore inhibition of KIAA1827 (Accession XP_290834.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1827.

[34004] KIAA1829 (Accession XP_030378.2) is another GAM281 target gene, herein designated TARGET GENE. KIAA1829 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1829, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1829 BINDING SITE, designated SEQ ID:14863, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34005] Another function of GAM281 is therefore inhibition of KIAA1829 (Accession XP_030378.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1829.

[34006] KIAA1836 (Accession XP_114087.2) is another GAM281 target gene, herein designated TARGET GENE. KIAA1836 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1836, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1836 BINDING SITE, designated SEQ ID:12627, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34007] Another function of GAM281 is therefore inhibition of KIAA1836 (Accession XP_114087.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1836.

[34008] KIAA1853 (Accession XP_045184.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1853 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1853, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1853 BINDING SITE, designated SEQ ID:19095, to the

nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34009] Another function of GAM281 is therefore inhibition of KIAA1853 (Accession XP_045184.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1853.

[34010] KIAA1862 (Accession XP_044212.4) is another GAM281 target gene, herein designated TARGET GENE. KIAA1862 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1862, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1862 BINDING SITE, designated SEQ ID:16627, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34011] Another function of GAM281 is therefore inhibition of KIAA1862 (Accession XP_044212.4) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1862.

[34012] KIAA1904 (Accession XP_056282.1) is another GAM281

target gene, herein designated TARGET GENE. KIAA1904 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1904, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1904 BINDING SITE, designated SEQ ID:16492, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34013] Another function of GAM281 is therefore inhibition of KIAA1904 (Accession XP_056282.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1904.

[34014] KIAA1922 (Accession XP_057040.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1922 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA1922, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1922 BINDING SITE, designated SEQ ID:7553, to the nucleotide sequence of GAM281 RNA, herein designated

GAM RNA, also designated SEQ ID:278.

[34015] Another function of GAM281 is therefore inhibition of KIAA1922 (Accession XP_057040.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1922.

[34016] KIAA1924 (Accession NP_694971.2) is another GAM281 target gene, herein designated TARGET GENE. KIAA1924 BINDING SITE1 and KIAA1924 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1924, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1924 BINDING SITE1 and KIAA1924 BINDING SITE2, designated SEQ ID:8341 and SEQ ID:1857 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34017] Another function of GAM281 is therefore inhibition of KIAA1924 (Accession NP_694971.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1924.

[34018] KIAA1937 (Accession XP_057107.3) is another GAM281 target gene, herein designated TARGET GENE. KIAA1937 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA1937, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1937 BINDING SITE, designated SEQ ID:2983, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34019] Another function of GAM281 is therefore inhibition of KIAA1937 (Accession XP_057107.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1937.

[34020] KIAA1971 (Accession XP_058720.4) is another GAM281 target gene, herein designated TARGET GENE. KIAA1971 BINDING SITE1 through KIAA1971 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by KIAA1971, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1971 BINDING SITE1

through KIAA1971 BINDING SITE3, designated SEQ ID:11506, SEQ ID:6902 and SEQ ID:5820 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34021] Another function of GAM281 is therefore inhibition of KIAA1971 (Accession XP_058720.4) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1971.

[34022] KIAA1987 (Accession XP_113870.1) is another GAM281 target gene, herein designated TARGET GENE. KIAA1987 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA1987, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1987 BINDING SITE, designated SEQ ID:7554, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34023] Another function of GAM281 is therefore inhibition of KIAA1987 (Accession XP_113870.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA1987.

[34024] KIAA2028 (Accession XP_059415.2) is another GAM281 target gene, herein designated TARGET GENE. KIAA2028 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA2028, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA2028 BINDING SITE, designated SEQ ID:12100, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34025] Another function of GAM281 is therefore inhibition of KIAA2028 (Accession XP_059415.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA2028.

[34026] KIF25 (Accession NP_005346.2) is another GAM281 target gene, herein designated TARGET GENE. KIF25 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by KIF25, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of KIF25 BINDING SITE, designated SEQ ID:17138, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34027] Another function of GAM281 is therefore inhibition of KIF25 (Accession NP_005346.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIF25.

[34028] KIF25 (Accession NP_085118.1) is another GAM281 target gene, herein designated TARGET GENE. KIF25 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by KIF25, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIF25 BINDING SITE, designated SEQ ID:17138, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34029] Another function of GAM281 is therefore inhibition of KIF25 (Accession NP_085118.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIF25.

[34030] KIP2 (Accession NP_006374.1) is another GAM281 target gene, herein designated TARGET GENE. KIP2 BINDING SITE

is a target binding site found in the 3` untranslated region of mRNA encoded by KIP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIP2 BINDING SITE, designated SEQ ID:4201, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34031] Another function of GAM281 is therefore inhibition of KIP2 (Accession NP_006374.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIP2.

[34032] Kruppel-like factor 12 (KLF12, Accession NP_009180.3) is another GAM281 target gene, herein designated TARGET GENE. KLF12 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KLF12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KLF12 BINDING SITE, designated SEQ ID:1127, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34033] Another function of GAM281 is therefore inhibition of Kruppel-like factor 12 (KLF12, Accession NP_009180.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KLF12.

[34034] Killer cell lectin-like receptor subfamily d, member 1 (KLRD1, Accession NP_002253.1) is another GAM281 target gene, herein designated TARGET GENE. KLRD1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KLRD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KLRD1 BINDING SITE, designated SEQ ID:2353, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34035] Another function of GAM281 is therefore inhibition of Killer cell lectin-like receptor subfamily d, member 1 (KLRD1, Accession NP_002253.1), a gene which is a receptor for the recognition of mhc class i hla- e molecules by nk cells and some cytotoxic t- cells. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KLRD1.

[34036] The function of KLRD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Killer cell lectin-like receptor subfamily d, member 1 (KLRD1, Accession NP_031360.1) is another GAM281 target gene, herein designated TARGET GENE. KLRD1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KLRD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KLRD1 BINDING SITE, designated SEQ ID:2353, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34037] Another function of GAM281 is therefore inhibition of Killer cell lectin-like receptor subfamily d, member 1 (KLRD1, Accession NP_031360.1), a gene which is a receptor for the recognition of mhc class i hla- e molecules by nk cells and some cytotoxic t- cells. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KLRD1.

[34038] The function of KLRD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Kynurenine 3-monooxygenase (kynurenine 3-hydroxylase) (KMO, Accession NP_003670.1) is another GAM281 target gene, herein designated TARGET GENE. KMO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KMO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KMO BINDING SITE, designated SEQ ID:6338, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34039] Another function of GAM281 is therefore inhibition of Kynurenine 3-monooxygenase (kynurenine 3-hydroxylase) (KMO, Accession NP_003670.1), a gene which may play a role in encephalic photoreception. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KMO.

[34040] The function of KMO and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM30.1.Lysosomal-associated membrane protein 3 (LAMP3, Accession NP_055213.1) is another GAM281 target gene, herein designated TARGET GENE. LAMP3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LAMP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LAMP3 BINDING SITE, designated SEQ ID:17760, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34041] Another function of GAM281 is therefore inhibition of Lysosomal-associated membrane protein 3 (LAMP3, Accession NP_055213.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LAMP3.

[34042] Lipocalin 7 (LCN7, Accession NP_071447.1) is another GAM281 target gene, herein designated TARGET GENE. LCN7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LCN7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of LCN7 BINDING SITE, designated SEQ ID:15937, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34043] Another function of GAM281 is therefore inhibition of Lipocalin 7 (LCN7, Accession NP_071447.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LCN7.

[34044] LCX (Accession XP_167612.2) is another GAM281 target gene, herein designated TARGET GENE. LCX BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LCX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LCX BINDING SITE, designated SEQ ID:2891, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34045] Another function of GAM281 is therefore inhibition of LCX (Accession XP_167612.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LCX.

[34046] Leptin receptor overlapping transcript-like 1 (LEPROTL1, Accession NP_056159.1) is another GAM281 target gene, herein designated TARGET GENE. LEPROTL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LEPROTL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LEPROTL1 BINDING SITE, designated SEQ ID:1871, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34047] Another function of GAM281 is therefore inhibition of Leptin receptor overlapping transcript-like 1 (LEPROTL1, Accession NP_056159.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LEPROTL1.

[34048] Leucine zipper-ef-hand containing transmembrane protein 1 (LETM1, Accession NP_036450.1) is another GAM281 target gene, herein designated TARGET GENE. LETM1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LETM1, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LETM1 BINDING SITE, designated SEQ ID:18695, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34049] Another function of GAM281 is therefore inhibition of Leucine zipper-ef-hand containing transmembrane protein 1 (LETM1, Accession NP_036450.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LETM1.

[34050] LGP1 (Accession NP_115873.1) is another GAM281 target gene, herein designated TARGET GENE. LGP1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LGP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LGP1 BINDING SITE, designated SEQ ID:16610, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34051] Another function of GAM281 is therefore inhibition of LGP1 (Accession NP_115873.1) . Accordingly, utilities of

GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LGP1.

[34052] LGP2 (Accession NP_077024.1) is another GAM281 target gene, herein designated TARGET GENE. LGP2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LGP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LGP2 BINDING SITE, designated SEQ ID:8032, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34053] Another function of GAM281 is therefore inhibition of LGP2 (Accession NP_077024.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LGP2.

[34054] LIN-28 (Accession NP_078950.1) is another GAM281 target gene, herein designated TARGET GENE. LIN-28 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LIN-28, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LIN-28

BINDING SITE, designated SEQ ID:4726, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34055] Another function of GAM281 is therefore inhibition of LIN-28 (Accession NP_078950.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LIN-28.

[34056] Link-GEFII (Accession NP_057423.1) is another GAM281 target gene, herein designated TARGET GENE. Link-GEFII BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by Link-GEFII, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of Link-GEFII BINDING SITE, designated SEQ ID:19936, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34057] Another function of GAM281 is therefore inhibition of Link-GEFII (Accession NP_057423.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Link-GEFII.

[34058] Lipase, member h (LIPH, Accession NP_640341.1) is an-

other GAM281 target gene, herein designated TARGET GENE. LIPH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LIPH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LIPH BINDING SITE, designated SEQ ID:10379, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34059] Another function of GAM281 is therefore inhibition of Lipase, member h (LIPH, Accession NP_640341.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LIPH.

[34060] LNK (Accession NP_005466.1) is another GAM281 target gene, herein designated TARGET GENE. LNK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LNK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LNK BINDING SITE, designated SEQ ID:13992, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA,

also designated SEQ ID:278.

[34061] Another function of GAM281 is therefore inhibition of LNK (Accession NP_005466.1), a gene which links T- cell receptor activation signal to phospholipase c- gamma- 1, grb- 2 and phosphatidylinositol 3- kinase (by similarity). Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LNK.

[34062] The function of LNK and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.LOC112687 (Accession XP_053145.1) is another GAM281 target gene, herein designated TARGET GENE. LOC112687 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC112687, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC112687 BINDING SITE, designated SEQ ID:16673, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34063] Another function of GAM281 is therefore inhibition of

LOC112687 (Accession XP_053145.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC112687.

[34064] LOC112817 (Accession NP_612422.2) is another GAM281 target gene, herein designated TARGET GENE. LOC112817 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC112817, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC112817 BINDING SITE, designated SEQ ID:16256, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34065] Another function of GAM281 is therefore inhibition of LOC112817 (Accession NP_612422.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC112817.

[34066] LOC112868 (Accession XP_053402.1) is another GAM281 target gene, herein designated TARGET GENE. LOC112868 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC112868, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC112868 BINDING SITE, designated SEQ ID:12772, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34067] Another function of GAM281 is therefore inhibition of LOC112868 (Accession XP_053402.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC112868.

[34068] LOC113444 (Accession NP_612437.2) is another GAM281 target gene, herein designated TARGET GENE. LOC113444 BINDING SITE1 through LOC113444 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC113444, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC113444 BINDING SITE1 through LOC113444 BINDING SITE3, designated SEQ ID:15899, SEQ ID:5336 and SEQ ID:18294 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34069] Another function of GAM281 is therefore inhibition of LOC113444 (Accession NP_612437.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC113444.

[34070] LOC113828 (Accession NP_612444.1) is another GAM281 target gene, herein designated TARGET GENE. LOC113828 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC113828, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC113828 BINDING SITE, designated SEQ ID:5632, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34071] Another function of GAM281 is therefore inhibition of LOC113828 (Accession NP_612444.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC113828.

[34072] LOC115123 (Accession XP_055276.1) is another GAM281 target gene, herein designated TARGET GENE. LOC115123 BINDING SITE is a target binding site found in the 5` un-

translated region of mRNA encoded by LOC115123, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC115123 BINDING SITE, designated SEQ ID:15271, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34073] Another function of GAM281 is therefore inhibition of LOC115123 (Accession XP_055276.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC115123.

[34074] LOC115219 (Accession XP_055499.2) is another GAM281 target gene, herein designated TARGET GENE. LOC115219 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC115219, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC115219 BINDING SITE, designated SEQ ID:12422, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34075] Another function of GAM281 is therefore inhibition of

LOC115219 (Accession XP_055499.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC115219.

[34076] LOC115648 (Accession NP_663299.1) is another GAM281 target gene, herein designated TARGET GENE. LOC115648 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC115648, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC115648 BINDING SITE, designated SEQ ID:7429, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34077] Another function of GAM281 is therefore inhibition of LOC115648 (Accession NP_663299.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC115648.

[34078] LOC116411 (Accession XP_058095.1) is another GAM281 target gene, herein designated TARGET GENE. LOC116411 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC116411, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC116411 BINDING SITE, designated SEQ ID:14720, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34079] Another function of GAM281 is therefore inhibition of LOC116411 (Accession XP_058095.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC116411.

[34080] LOC118490 (Accession XP_060981.3) is another GAM281 target gene, herein designated TARGET GENE. LOC118490 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC118490, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC118490 BINDING SITE, designated SEQ ID:456, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34081] Another function of GAM281 is therefore inhibition of LOC118490 (Accession XP_060981.3) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC118490.

[34082] LOC118812 (Accession NP_849154.1) is another GAM281 target gene, herein designated TARGET GENE. LOC118812 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC118812, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC118812 BINDING SITE, designated SEQ ID:2649, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34083] Another function of GAM281 is therefore inhibition of LOC118812 (Accession NP_849154.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC118812.

[34084] LOC118812 (Accession XP_058346.2) is another GAM281 target gene, herein designated TARGET GENE. LOC118812 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded

by LOC118812, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC118812 BINDING SITE, designated SEQ ID:2649, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34085] Another function of GAM281 is therefore inhibition of LOC118812 (Accession XP_058346.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC118812.

[34086] LOC120526 (Accession XP_058475.1) is another GAM281 target gene, herein designated TARGET GENE. LOC120526 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC120526, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC120526 BINDING SITE, designated SEQ ID:17112, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34087] Another function of GAM281 is therefore inhibition of

LOC120526 (Accession XP_058475.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC120526.

[34088] LOC121952 (Accession XP_062872.2) is another GAM281 target gene, herein designated TARGET GENE. LOC121952 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC121952, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC121952 BINDING SITE, designated SEQ ID:9891, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34089] Another function of GAM281 is therefore inhibition of LOC121952 (Accession XP_062872.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC121952.

[34090] LOC124221 (Accession XP_058785.3) is another GAM281 target gene, herein designated TARGET GENE. LOC124221 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC124221, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC124221 BINDING SITE, designated SEQ ID:14576, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34091] Another function of GAM281 is therefore inhibition of LOC124221 (Accession XP_058785.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC124221.

[34092] LOC125061 (Accession XP_058889.3) is another GAM281 target gene, herein designated TARGET GENE. LOC125061 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC125061, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC125061 BINDING SITE, designated SEQ ID:1744, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34093] Another function of GAM281 is therefore inhibition of LOC125061 (Accession XP_058889.3) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC125061.

[34094] LOC126669 (Accession XP_060121.4) is another GAM281 target gene, herein designated TARGET GENE. LOC126669 BINDING SITE1 and LOC126669 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC126669, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC126669 BINDING SITE1 and LOC126669 BINDING SITE2, designated SEQ ID:17906 and SEQ ID:3477 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34095] Another function of GAM281 is therefore inhibition of LOC126669 (Accession XP_060121.4) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC126669.

[34096] LOC127253 (Accession XP_059122.1) is another GAM281 target gene, herein designated TARGET GENE. LOC127253 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC127253, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC127253 BINDING SITE, designated SEQ ID:18918, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34097] Another function of GAM281 is therefore inhibition of LOC127253 (Accession XP_059122.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC127253.

[34098] LOC127841 (Accession XP_059184.1) is another GAM281 target gene, herein designated TARGET GENE. LOC127841 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC127841, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC127841 BINDING SITE, designated SEQ ID:18516, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34099] Another function of GAM281 is therefore inhibition of

LOC127841 (Accession XP_059184.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC127841.

[34100] LOC128387 (Accession XP_059243.2) is another GAM281 target gene, herein designated TARGET GENE. LOC128387 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC128387, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC128387 BINDING SITE, designated SEQ ID:15173, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34101] Another function of GAM281 is therefore inhibition of LOC128387 (Accession XP_059243.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC128387.

[34102] LOC130813 (Accession XP_065904.1) is another GAM281 target gene, herein designated TARGET GENE. LOC130813 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC130813, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC130813 BINDING SITE, designated SEQ ID:12052, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34103] Another function of GAM281 is therefore inhibition of LOC130813 (Accession XP_065904.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC130813.

[34104] LOC132241 (Accession XP_059583.1) is another GAM281 target gene, herein designated TARGET GENE. LOC132241 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC132241, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC132241 BINDING SITE, designated SEQ ID:509, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34105] Another function of GAM281 is therefore inhibition of LOC132241 (Accession XP_059583.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC132241.

[34106] LOC135293 (Accession XP_072402.4) is another GAM281 target gene, herein designated TARGET GENE. LOC135293 BINDING SITE1 and LOC135293 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC135293, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC135293 BINDING SITE1 and LOC135293 BINDING SITE2, designated SEQ ID:3512 and SEQ ID:10443 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34107] Another function of GAM281 is therefore inhibition of LOC135293 (Accession XP_072402.4) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC135293.

[34108] LOC135763 (Accession NP_612639.1) is another GAM281 target gene, herein designated TARGET GENE. LOC135763 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC135763, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC135763 BINDING SITE, designated SEQ ID:17207, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34109] Another function of GAM281 is therefore inhibition of LOC135763 (Accession NP_612639.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC135763.

[34110] LOC135818 (Accession XP_059804.4) is another GAM281 target gene, herein designated TARGET GENE. LOC135818 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC135818, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC135818 BINDING SITE, designated SEQ ID:19136, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34111] Another function of GAM281 is therefore inhibition of

LOC135818 (Accession XP_059804.4) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC135818.

[34112] LOC137886 (Accession XP_059929.3) is another GAM281 target gene, herein designated TARGET GENE. LOC137886 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC137886, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC137886 BINDING SITE, designated SEQ ID:19990, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34113] Another function of GAM281 is therefore inhibition of LOC137886 (Accession XP_059929.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC137886.

[34114] LOC138428 (Accession XP_059972.1) is another GAM281 target gene, herein designated TARGET GENE. LOC138428 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC138428, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC138428 BINDING SITE, designated SEQ ID:3277, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34115] Another function of GAM281 is therefore inhibition of LOC138428 (Accession XP_059972.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC138428.

[34116] LOC139422 (Accession XP_066687.2) is another GAM281 target gene, herein designated TARGET GENE. LOC139422 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC139422, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC139422 BINDING SITE, designated SEQ ID:9489, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34117] Another function of GAM281 is therefore inhibition of LOC139422 (Accession XP_066687.2) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC139422.

[34118] LOC142946 (Accession XP_096365.1) is another GAM281 target gene, herein designated TARGET GENE. LOC142946 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC142946, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC142946 BINDING SITE, designated SEQ ID:2999, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34119] Another function of GAM281 is therefore inhibition of LOC142946 (Accession XP_096365.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC142946.

[34120] LOC143241 (Accession NP_620167.1) is another GAM281 target gene, herein designated TARGET GENE. LOC143241 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC143241, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC143241 BINDING SITE, designated SEQ ID:15574, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34121] Another function of GAM281 is therefore inhibition of LOC143241 (Accession NP_620167.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC143241.

[34122] LOC144248 (Accession XP_084786.1) is another GAM281 target gene, herein designated TARGET GENE. LOC144248 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC144248, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144248 BINDING SITE, designated SEQ ID:3159, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34123] Another function of GAM281 is therefore inhibition of LOC144248 (Accession XP_084786.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC144248.

[34124] LOC144402 (Accession NP_705898.1) is another GAM281 target gene, herein designated TARGET GENE. LOC144402 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC144402, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144402 BINDING SITE, designated SEQ ID:3665, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34125] Another function of GAM281 is therefore inhibition of LOC144402 (Accession NP_705898.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144402.

[34126] LOC144404 (Accession XP_084852.6) is another GAM281 target gene, herein designated TARGET GENE. LOC144404 BINDING SITE1 through LOC144404 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC144404, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144404 BINDING SITE1 through LOC144404 BINDING SITE3, designated SEQ ID:15352, SEQ ID:5897 and SEQ ID:1633 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34127] Another function of GAM281 is therefore inhibition of LOC144404 (Accession XP_084852.6) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144404.

[34128] LOC144481 (Accession XP_096611.2) is another GAM281 target gene, herein designated TARGET GENE. LOC144481 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC144481, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144481 BINDING SITE, designated SEQ ID:19220, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34129] Another function of GAM281 is therefore inhibition of LOC144481 (Accession XP_096611.2) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144481.

[34130] LOC144667 (Accession XP_096648.1) is another GAM281 target gene, herein designated TARGET GENE. LOC144667 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC144667, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144667 BINDING SITE, designated SEQ ID:12712, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34131] Another function of GAM281 is therefore inhibition of LOC144667 (Accession XP_096648.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144667.

[34132] LOC144742 (Accession XP_084949.1) is another GAM281 target gene, herein designated TARGET GENE. LOC144742 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC144742, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144742 BINDING SITE, designated SEQ ID:17736, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34133] Another function of GAM281 is therefore inhibition of LOC144742 (Accession XP_084949.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144742.

[34134] LOC144747 (Accession XP_084954.1) is another GAM281 target gene, herein designated TARGET GENE. LOC144747 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC144747, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144747 BINDING SITE, designated SEQ ID:12981, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34135] Another function of GAM281 is therefore inhibition of LOC144747 (Accession XP_084954.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC144747.

[34136] LOC144766 (Accession XP_084963.2) is another GAM281 target gene, herein designated TARGET GENE. LOC144766 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC144766, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144766 BINDING SITE, designated SEQ ID:8972, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34137] Another function of GAM281 is therefore inhibition of LOC144766 (Accession XP_084963.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144766.

[34138] LOC144776 (Accession XP_084964.1) is another GAM281 target gene, herein designated TARGET GENE. LOC144776 BINDING SITE1 and LOC144776 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC144776, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING

SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144776 BINDING SITE1 and LOC144776 BINDING SITE2, designated SEQ ID:444 and SEQ ID:16275 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34139] Another function of GAM281 is therefore inhibition of LOC144776 (Accession XP_084964.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144776.

[34140] LOC144817 (Accession XP_084972.1) is another GAM281 target gene, herein designated TARGET GENE. LOC144817 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC144817, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144817 BINDING SITE, designated SEQ ID:12065, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34141] Another function of GAM281 is therefore inhibition of LOC144817 (Accession XP_084972.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144817.

[34142] LOC144871 (Accession XP_096698.1) is another GAM281 target gene, herein designated TARGET GENE. LOC144871 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC144871, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144871 BINDING SITE, designated SEQ ID:14506, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34143] Another function of GAM281 is therefore inhibition of LOC144871 (Accession XP_096698.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144871.

[34144] LOC144962 (Accession XP_084990.1) is another GAM281 target gene, herein designated TARGET GENE. LOC144962 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC144962, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC144962 BINDING SITE, designated SEQ ID:12130, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34145] Another function of GAM281 is therefore inhibition of LOC144962 (Accession XP_084990.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC144962.

[34146] LOC145268 (Accession XP_085072.1) is another GAM281 target gene, herein designated TARGET GENE. LOC145268 BINDING SITE1 and LOC145268 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC145268, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145268 BINDING SITE1 and LOC145268 BINDING SITE2, designated SEQ ID:18805 and SEQ ID:6493 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34147] Another function of GAM281 is therefore inhibition of

LOC145268 (Accession XP_085072.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145268.

[34148] LOC145453 (Accession XP_085120.1) is another GAM281 target gene, herein designated TARGET GENE. LOC145453 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC145453, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145453 BINDING SITE, designated SEQ ID:11939, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34149] Another function of GAM281 is therefore inhibition of LOC145453 (Accession XP_085120.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145453.

[34150] LOC145663 (Accession XP_096829.1) is another GAM281 target gene, herein designated TARGET GENE. LOC145663 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC145663, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145663 BINDING SITE, designated SEQ ID:13897, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34151] Another function of GAM281 is therefore inhibition of LOC145663 (Accession XP_096829.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145663.

[34152] LOC145725 (Accession XP_085211.1) is another GAM281 target gene, herein designated TARGET GENE. LOC145725 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC145725, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145725 BINDING SITE, designated SEQ ID:4773, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34153] Another function of GAM281 is therefore inhibition of LOC145725 (Accession XP_085211.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145725.

[34154] LOC145757 (Accession XP_085227.1) is another GAM281 target gene, herein designated TARGET GENE. LOC145757 BINDING SITE1 and LOC145757 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC145757, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145757 BINDING SITE1 and LOC145757 BINDING SITE2, designated SEQ ID:11523 and SEQ ID:7370 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34155] Another function of GAM281 is therefore inhibition of LOC145757 (Accession XP_085227.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145757.

[34156] LOC145783 (Accession XP_085231.2) is another GAM281 target gene, herein designated TARGET GENE. LOC145783 BINDING SITE is a target binding site found in the 5` un-

translated region of mRNA encoded by LOC145783, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145783 BINDING SITE, designated SEQ ID:2196, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34157] Another function of GAM281 is therefore inhibition of LOC145783 (Accession XP_085231.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145783.

[34158] LOC145813 (Accession XP_096873.1) is another GAM281 target gene, herein designated TARGET GENE. LOC145813 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC145813, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145813 BINDING SITE, designated SEQ ID:16256, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34159] Another function of GAM281 is therefore inhibition of

LOC145813 (Accession XP_096873.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145813.

[34160] LOC146177 (Accession NP_778229.1) is another GAM281 target gene, herein designated TARGET GENE. LOC146177 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC146177, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146177 BINDING SITE, designated SEQ ID:16175, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34161] Another function of GAM281 is therefore inhibition of LOC146177 (Accession NP_778229.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146177.

[34162] LOC146229 (Accession XP_085387.1) is another GAM281 target gene, herein designated TARGET GENE. LOC146229 BINDING SITE1 through LOC146229 BINDING SITE4 are target binding sites found in untranslated regions of

mRNA encoded by LOC146229, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146229 BINDING SITE1 through LOC146229 BINDING SITE4, designated SEQ ID:5551, SEQ ID:5672, SEQ ID:8706 and SEQ ID:1644 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34163] Another function of GAM281 is therefore inhibition of LOC146229 (Accession XP_085387.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146229.

[34164] LOC146346 (Accession XP_085430.1) is another GAM281 target gene, herein designated TARGET GENE. LOC146346 BINDING SITE1 through LOC146346 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC146346, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146346 BINDING SITE1 through LOC146346 BINDING SITE3, des-

ignated SEQ ID:1901, SEQ ID:5798 and SEQ ID:17670 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34165] Another function of GAM281 is therefore inhibition of LOC146346 (Accession XP_085430.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146346.

[34166] LOC146429 (Accession XP_096998.2) is another GAM281 target gene, herein designated TARGET GENE. LOC146429 BINDING SITE1 and LOC146429 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC146429, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146429 BINDING SITE1 and LOC146429 BINDING SITE2, designated SEQ ID:2457 and SEQ ID:4769 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34167] Another function of GAM281 is therefore inhibition of LOC146429 (Accession XP_096998.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC146429.

[34168] LOC146443 (Accession XP_085461.6) is another GAM281 target gene, herein designated TARGET GENE. LOC146443 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC146443, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146443 BINDING SITE, designated SEQ ID:813, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34169] Another function of GAM281 is therefore inhibition of LOC146443 (Accession XP_085461.6) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146443.

[34170] LOC146475 (Accession XP_097006.1) is another GAM281 target gene, herein designated TARGET GENE. LOC146475 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC146475, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC146475 BINDING SITE, designated SEQ ID:9246, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34171] Another function of GAM281 is therefore inhibition of LOC146475 (Accession XP_097006.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146475.

[34172] LOC146513 (Accession XP_097013.1) is another GAM281 target gene, herein designated TARGET GENE. LOC146513 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146513, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146513 BINDING SITE, designated SEQ ID:3374, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34173] Another function of GAM281 is therefore inhibition of LOC146513 (Accession XP_097013.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC146513.

[34174] LOC146603 (Accession XP_085514.2) is another GAM281 target gene, herein designated TARGET GENE. LOC146603 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC146603, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146603 BINDING SITE, designated SEQ ID:7382, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34175] Another function of GAM281 is therefore inhibition of LOC146603 (Accession XP_085514.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146603.

[34176] LOC146756 (Accession XP_097085.5) is another GAM281 target gene, herein designated TARGET GENE. LOC146756 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146756, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC146756 BINDING SITE, designated SEQ ID:5954, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34177] Another function of GAM281 is therefore inhibition of LOC146756 (Accession XP_097085.5) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146756.

[34178] LOC146784 (Accession XP_085588.1) is another GAM281 target gene, herein designated TARGET GENE. LOC146784 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC146784, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146784 BINDING SITE, designated SEQ ID:13448, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34179] Another function of GAM281 is therefore inhibition of LOC146784 (Accession XP_085588.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146784.

[34180] LOC146839 (Accession XP_097107.1) is another GAM281 target gene, herein designated TARGET GENE. LOC146839 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146839, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146839 BINDING SITE, designated SEQ ID:1745, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34181] Another function of GAM281 is therefore inhibition of LOC146839 (Accession XP_097107.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146839.

[34182] LOC146894 (Accession NP_660316.1) is another GAM281 target gene, herein designated TARGET GENE. LOC146894 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146894, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146894 BINDING SITE, designated SEQ ID:8315, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34183] Another function of GAM281 is therefore inhibition of LOC146894 (Accession NP_660316.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146894.

[34184] LOC146895 (Accession XP_097120.1) is another GAM281 target gene, herein designated TARGET GENE. LOC146895 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC146895, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146895 BINDING SITE, designated SEQ ID:8232, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34185] Another function of GAM281 is therefore inhibition of LOC146895 (Accession XP_097120.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146895.

[34186] LOC146901 (Accession XP_097121.1) is another GAM281

target gene, herein designated TARGET GENE. LOC146901 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146901, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146901 BINDING SITE, designated SEQ ID:6392, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34187] Another function of GAM281 is therefore inhibition of LOC146901 (Accession XP_097121.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146901.

[34188] LOC146909 (Accession XP_085634.2) is another GAM281 target gene, herein designated TARGET GENE. LOC146909 BINDING SITE1 and LOC146909 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC146909, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146909 BINDING SITE1 and LOC146909 BINDING SITE2, designated SEQ ID:9492

and SEQ ID:19550 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34189] Another function of GAM281 is therefore inhibition of LOC146909 (Accession XP_085634.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146909.

[34190] LOC147071 (Accession XP_054031.5) is another GAM281 target gene, herein designated TARGET GENE. LOC147071 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC147071, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147071 BINDING SITE, designated SEQ ID:16699, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34191] Another function of GAM281 is therefore inhibition of LOC147071 (Accession XP_054031.5) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147071.

[34192] LOC147080 (Accession XP_097182.1) is another GAM281 target gene, herein designated TARGET GENE. LOC147080 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC147080, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147080 BINDING SITE, designated SEQ ID:12558, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34193] Another function of GAM281 is therefore inhibition of LOC147080 (Accession XP_097182.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147080.

[34194] LOC147166 (Accession XP_085722.2) is another GAM281 target gene, herein designated TARGET GENE. LOC147166 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC147166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147166 BINDING SITE, designated SEQ ID:10618, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34195] Another function of GAM281 is therefore inhibition of LOC147166 (Accession XP_085722.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147166.

[34196] LOC147381 (Accession XP_097230.2) is another GAM281 target gene, herein designated TARGET GENE. LOC147381 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC147381, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147381 BINDING SITE, designated SEQ ID:19915, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34197] Another function of GAM281 is therefore inhibition of LOC147381 (Accession XP_097230.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147381.

[34198] LOC147407 (Accession XP_084000.1) is another GAM281

target gene, herein designated TARGET GENE. LOC147407 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC147407, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147407 BINDING SITE, designated SEQ ID:12065, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34199] Another function of GAM281 is therefore inhibition of LOC147407 (Accession XP_084000.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147407.

[34200] LOC147622 (Accession XP_097255.1) is another GAM281 target gene, herein designated TARGET GENE. LOC147622 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC147622, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147622 BINDING SITE, designated SEQ ID:16101, to the nucleotide sequence of GAM281 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:278.

[34201] Another function of GAM281 is therefore inhibition of LOC147622 (Accession XP_097255.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147622.

[34202] LOC147817 (Accession XP_085903.1) is another GAM281 target gene, herein designated TARGET GENE. LOC147817 BINDING SITE1 and LOC147817 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC147817, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147817 BINDING SITE1 and LOC147817 BINDING SITE2, designated SEQ ID:19233 and SEQ ID:1634 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34203] Another function of GAM281 is therefore inhibition of LOC147817 (Accession XP_085903.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147817.

[34204] LOC147841 (Accession XP_085924.2) is another GAM281 target gene, herein designated TARGET GENE. LOC147841 BINDING SITE1 and LOC147841 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC147841, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147841 BINDING SITE1 and LOC147841 BINDING SITE2, designated SEQ ID:12065 and SEQ ID:8642 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34205] Another function of GAM281 is therefore inhibition of LOC147841 (Accession XP_085924.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147841.

[34206] LOC147947 (Accession XP_085974.1) is another GAM281 target gene, herein designated TARGET GENE. LOC147947 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC147947, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC147947 BINDING SITE, designated SEQ ID:17952, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34207] Another function of GAM281 is therefore inhibition of LOC147947 (Accession XP_085974.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147947.

[34208] LOC148137 (Accession NP_653293.1) is another GAM281 target gene, herein designated TARGET GENE. LOC148137 BINDING SITE1 and LOC148137 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC148137, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148137 BINDING SITE1 and LOC148137 BINDING SITE2, designated SEQ ID:17935 and SEQ ID:5784 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34209] Another function of GAM281 is therefore inhibition of LOC148137 (Accession NP_653293.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148137.

[34210] LOC148189 (Accession XP_086087.1) is another GAM281 target gene, herein designated TARGET GENE. LOC148189 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC148189, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148189 BINDING SITE, designated SEQ ID:12666, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34211] Another function of GAM281 is therefore inhibition of LOC148189 (Accession XP_086087.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148189.

[34212] LOC148198 (Accession XP_047554.4) is another GAM281 target gene, herein designated TARGET GENE. LOC148198 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC148198, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148198 BINDING SITE, designated SEQ ID:11563, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34213] Another function of GAM281 is therefore inhibition of LOC148198 (Accession XP_047554.4) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148198.

[34214] LOC148708 (Accession XP_086286.4) is another GAM281 target gene, herein designated TARGET GENE. LOC148708 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC148708, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148708 BINDING SITE, designated SEQ ID:15671, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34215] Another function of GAM281 is therefore inhibition of LOC148708 (Accession XP_086286.4) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC148708.

[34216] LOC148709 (Accession XP_086281.1) is another GAM281 target gene, herein designated TARGET GENE. LOC148709 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC148709, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148709 BINDING SITE, designated SEQ ID:9201, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34217] Another function of GAM281 is therefore inhibition of LOC148709 (Accession XP_086281.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148709.

[34218] LOC149149 (Accession XP_097598.1) is another GAM281 target gene, herein designated TARGET GENE. LOC149149 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC149149, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC149149 BINDING SITE, designated SEQ ID:2184, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34219] Another function of GAM281 is therefore inhibition of LOC149149 (Accession XP_097598.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149149.

[34220] LOC149371 (Accession NP_787072.1) is another GAM281 target gene, herein designated TARGET GENE. LOC149371 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149371, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149371 BINDING SITE, designated SEQ ID:13354, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34221] Another function of GAM281 is therefore inhibition of LOC149371 (Accession NP_787072.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC149371.

[34222] LOC149466 (Accession XP_086546.1) is another GAM281 target gene, herein designated TARGET GENE. LOC149466 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149466, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149466 BINDING SITE, designated SEQ ID:16260, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34223] Another function of GAM281 is therefore inhibition of LOC149466 (Accession XP_086546.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149466.

[34224] LOC149478 (Accession XP_086536.1) is another GAM281 target gene, herein designated TARGET GENE. LOC149478 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149478, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC149478 BINDING SITE, designated SEQ ID:5016, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34225] Another function of GAM281 is therefore inhibition of LOC149478 (Accession XP_086536.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149478.

[34226] LOC149506 (Accession XP_097661.1) is another GAM281 target gene, herein designated TARGET GENE. LOC149506 BINDING SITE1 and LOC149506 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC149506, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149506 BINDING SITE1 and LOC149506 BINDING SITE2, designated SEQ ID:2139 and SEQ ID:1489 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34227] Another function of GAM281 is therefore inhibition of LOC149506 (Accession XP_097661.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC149506.

[34228] LOC149692 (Accession XP_097706.1) is another GAM281 target gene, herein designated TARGET GENE. LOC149692 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149692, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149692 BINDING SITE, designated SEQ ID:11025, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34229] Another function of GAM281 is therefore inhibition of LOC149692 (Accession XP_097706.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149692.

[34230] LOC149703 (Accession XP_097719.1) is another GAM281 target gene, herein designated TARGET GENE. LOC149703 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC149703, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC149703 BINDING SITE, designated SEQ ID:10508, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34231] Another function of GAM281 is therefore inhibition of LOC149703 (Accession XP_097719.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149703.

[34232] LOC150054 (Accession XP_097797.1) is another GAM281 target gene, herein designated TARGET GENE. LOC150054 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC150054, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150054 BINDING SITE, designated SEQ ID:5157, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34233] Another function of GAM281 is therefore inhibition of LOC150054 (Accession XP_097797.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC150054.

[34234] LOC150150 (Accession XP_097820.1) is another GAM281 target gene, herein designated TARGET GENE. LOC150150 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC150150, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150150 BINDING SITE, designated SEQ ID:8279, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34235] Another function of GAM281 is therefore inhibition of LOC150150 (Accession XP_097820.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150150.

[34236] LOC150157 (Accession XP_097823.1) is another GAM281 target gene, herein designated TARGET GENE. LOC150157 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150157, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC150157 BINDING SITE, designated SEQ ID:13000, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34237] Another function of GAM281 is therefore inhibition of LOC150157 (Accession XP_097823.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150157.

[34238] LOC150166 (Accession XP_097824.1) is another GAM281 target gene, herein designated TARGET GENE. LOC150166 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC150166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150166 BINDING SITE, designated SEQ ID:19856, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34239] Another function of GAM281 is therefore inhibition of LOC150166 (Accession XP_097824.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150166.

[34240] LOC150225 (Accession XP_097870.1) is another GAM281 target gene, herein designated TARGET GENE. LOC150225 BINDING SITE1 and LOC150225 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC150225, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150225 BINDING SITE1 and LOC150225 BINDING SITE2, designated SEQ ID:4400 and SEQ ID:7207 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34241] Another function of GAM281 is therefore inhibition of LOC150225 (Accession XP_097870.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150225.

[34242] LOC150356 (Accession XP_086884.2) is another GAM281 target gene, herein designated TARGET GENE. LOC150356 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC150356, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC150356 BINDING SITE, designated SEQ ID:9922, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34243] Another function of GAM281 is therefore inhibition of LOC150356 (Accession XP_086884.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150356.

[34244] LOC150383 (Accession XP_086905.1) is another GAM281 target gene, herein designated TARGET GENE. LOC150383 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150383, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150383 BINDING SITE, designated SEQ ID:826, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34245] Another function of GAM281 is therefore inhibition of LOC150383 (Accession XP_086905.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC150383.

[34246] LOC150384 (Accession XP_097894.1) is another GAM281 target gene, herein designated TARGET GENE. LOC150384 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC150384, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150384 BINDING SITE, designated SEQ ID:7485, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34247] Another function of GAM281 is therefore inhibition of LOC150384 (Accession XP_097894.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150384.

[34248] LOC150407 (Accession XP_086906.1) is another GAM281 target gene, herein designated TARGET GENE. LOC150407 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150407, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC150407 BINDING SITE, designated SEQ ID:5756, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34249] Another function of GAM281 is therefore inhibition of LOC150407 (Accession XP_086906.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150407.

[34250] LOC150587 (Accession XP_097917.1) is another GAM281 target gene, herein designated TARGET GENE. LOC150587 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC150587, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150587 BINDING SITE, designated SEQ ID:16940, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34251] Another function of GAM281 is therefore inhibition of LOC150587 (Accession XP_097917.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150587.

[34252] LOC150819 (Accession XP_097954.1) is another GAM281 target gene, herein designated TARGET GENE. LOC150819 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC150819, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150819 BINDING SITE, designated SEQ ID:18257, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34253] Another function of GAM281 is therefore inhibition of LOC150819 (Accession XP_097954.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150819.

[34254] LOC151057 (Accession XP_097998.1) is another GAM281 target gene, herein designated TARGET GENE. LOC151057 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC151057, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151057 BINDING SITE, designated SEQ ID:12075, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34255] Another function of GAM281 is therefore inhibition of LOC151057 (Accession XP_097998.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151057.

[34256] LOC151196 (Accession XP_098019.1) is another GAM281 target gene, herein designated TARGET GENE. LOC151196 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC151196, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151196 BINDING SITE, designated SEQ ID:19774, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34257] Another function of GAM281 is therefore inhibition of LOC151196 (Accession XP_098019.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151196.

[34258] LOC151201 (Accession XP_098021.1) is another GAM281

target gene, herein designated TARGET GENE. LOC151201 BINDING SITE1 and LOC151201 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC151201, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151201 BINDING SITE1 and LOC151201 BINDING SITE2, designated SEQ ID:12725 and SEQ ID:2572 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34259] Another function of GAM281 is therefore inhibition of LOC151201 (Accession XP_098021.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151201.

[34260] LOC151475 (Accession XP_098063.1) is another GAM281 target gene, herein designated TARGET GENE. LOC151475 BINDING SITE1 and LOC151475 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC151475, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of LOC151475 BINDING SITE1 and LOC151475 BINDING SITE2, designated SEQ ID:4174 and SEQ ID:4371 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34261] Another function of GAM281 is therefore inhibition of LOC151475 (Accession XP_098063.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151475.

[34262] LOC151636 (Accession NP_612144.1) is another GAM281 target gene, herein designated TARGET GENE. LOC151636 BINDING SITE1 through LOC151636 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC151636, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151636 BINDING SITE1 through LOC151636 BINDING SITE3, designated SEQ ID:2693, SEQ ID:4151 and SEQ ID:14731 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34263] Another function of GAM281 is therefore inhibition of

LOC151636 (Accession NP_612144.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151636.

[34264] LOC151658 (Accession XP_098103.1) is another GAM281 target gene, herein designated TARGET GENE. LOC151658 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC151658, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151658 BINDING SITE, designated SEQ ID:3130, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34265] Another function of GAM281 is therefore inhibition of LOC151658 (Accession XP_098103.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151658.

[34266] LOC151877 (Accession XP_098132.1) is another GAM281 target gene, herein designated TARGET GENE. LOC151877 BINDING SITE1 and LOC151877 BINDING SITE2 are target binding sites found in untranslated regions of mRNA en-

coded by LOC151877, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151877 BINDING SITE1 and LOC151877 BINDING SITE2, designated SEQ ID:17499 and SEQ ID:4677 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34267] Another function of GAM281 is therefore inhibition of LOC151877 (Accession XP_098132.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151877.

[34268] LOC151878 (Accession XP_087329.1) is another GAM281 target gene, herein designated TARGET GENE. LOC151878 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC151878, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151878 BINDING SITE, designated SEQ ID:15127, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34269] Another function of GAM281 is therefore inhibition of LOC151878 (Accession XP_087329.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151878.

[34270] LOC152245 (Accession XP_098182.1) is another GAM281 target gene, herein designated TARGET GENE. LOC152245 BINDING SITE1 and LOC152245 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC152245, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152245 BINDING SITE1 and LOC152245 BINDING SITE2, designated SEQ ID:9470 and SEQ ID:3559 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34271] Another function of GAM281 is therefore inhibition of LOC152245 (Accession XP_098182.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152245.

[34272] LOC152445 (Accession XP_098231.1) is another GAM281

target gene, herein designated TARGET GENE. LOC152445 BINDING SITE1 and LOC152445 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC152445, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152445 BINDING SITE1 and LOC152445 BINDING SITE2, designated SEQ ID:6147 and SEQ ID:2922 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34273] Another function of GAM281 is therefore inhibition of LOC152445 (Accession XP_098231.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152445.

[34274] LOC152620 (Accession XP_011108.2) is another GAM281 target gene, herein designated TARGET GENE. LOC152620 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC152620, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC152620 BINDING SITE, designated SEQ ID:1745, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34275] Another function of GAM281 is therefore inhibition of LOC152620 (Accession XP_011108.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152620.

[34276] LOC152719 (Accession XP_098257.1) is another GAM281 target gene, herein designated TARGET GENE. LOC152719 BINDING SITE1 and LOC152719 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC152719, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152719 BINDING SITE1 and LOC152719 BINDING SITE2, designated SEQ ID:11919 and SEQ ID:17637 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34277] Another function of GAM281 is therefore inhibition of LOC152719 (Accession XP_098257.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC152719.

[34278] LOC152765 (Accession XP_087519.1) is another GAM281 target gene, herein designated TARGET GENE. LOC152765 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC152765, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152765 BINDING SITE, designated SEQ ID:18605, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34279] Another function of GAM281 is therefore inhibition of LOC152765 (Accession XP_087519.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152765.

[34280] LOC152794 (Accession XP_087525.1) is another GAM281 target gene, herein designated TARGET GENE. LOC152794 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC152794, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC152794 BINDING SITE, designated SEQ ID:2010, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34281] Another function of GAM281 is therefore inhibition of LOC152794 (Accession XP_087525.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152794.

[34282] LOC152804 (Accession XP_098266.2) is another GAM281 target gene, herein designated TARGET GENE. LOC152804 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC152804, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152804 BINDING SITE, designated SEQ ID:9568, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34283] Another function of GAM281 is therefore inhibition of LOC152804 (Accession XP_098266.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC152804.

[34284] LOC153027 (Accession XP_041221.1) is another GAM281 target gene, herein designated TARGET GENE. LOC153027 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC153027, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153027 BINDING SITE, designated SEQ ID:1646, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34285] Another function of GAM281 is therefore inhibition of LOC153027 (Accession XP_041221.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153027.

[34286] LOC153077 (Accession XP_098307.1) is another GAM281 target gene, herein designated TARGET GENE. LOC153077 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC153077, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC153077 BINDING SITE, designated SEQ ID:5304, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34287] Another function of GAM281 is therefore inhibition of LOC153077 (Accession XP_098307.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153077.

[34288] LOC153811 (Accession XP_087779.2) is another GAM281 target gene, herein designated TARGET GENE. LOC153811 BINDING SITE1 through LOC153811 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC153811, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153811 BINDING SITE1 through LOC153811 BINDING SITE4, designated SEQ ID:19665, SEQ ID:9683, SEQ ID:9170 and SEQ ID:17512 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34289] Another function of GAM281 is therefore inhibition of LOC153811 (Accession XP_087779.2) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153811.

[34290] LOC153883 (Accession XP_087798.1) is another GAM281 target gene, herein designated TARGET GENE. LOC153883 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC153883, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153883 BINDING SITE, designated SEQ ID:15929, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34291] Another function of GAM281 is therefore inhibition of LOC153883 (Accession XP_087798.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153883.

[34292] LOC153910 (Accession XP_087801.1) is another GAM281 target gene, herein designated TARGET GENE. LOC153910 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC153910, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC153910 BINDING SITE, designated SEQ ID:2882, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34293] Another function of GAM281 is therefore inhibition of LOC153910 (Accession XP_087801.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC153910.

[34294] LOC154282 (Accession XP_098505.1) is another GAM281 target gene, herein designated TARGET GENE. LOC154282 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC154282, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154282 BINDING SITE, designated SEQ ID:4307, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34295] Another function of GAM281 is therefore inhibition of LOC154282 (Accession XP_098505.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC154282.

[34296] LOC154822 (Accession XP_098618.3) is another GAM281 target gene, herein designated TARGET GENE. LOC154822 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC154822, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154822 BINDING SITE, designated SEQ ID:19205, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34297] Another function of GAM281 is therefore inhibition of LOC154822 (Accession XP_098618.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154822.

[34298] LOC154877 (Accession XP_098626.1) is another GAM281 target gene, herein designated TARGET GENE. LOC154877 BINDING SITE1 through LOC154877 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC154877, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154877 BINDING SITE1 through LOC154877 BINDING SITE4, designated SEQ ID:17731, SEQ ID:3200, SEQ ID:12700 and SEQ ID:16089 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34299] Another function of GAM281 is therefore inhibition of LOC154877 (Accession XP_098626.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154877.

[34300] LOC155066 (Accession XP_088142.4) is another GAM281 target gene, herein designated TARGET GENE. LOC155066 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC155066, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC155066 BINDING SITE, designated SEQ ID:17980, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34301] Another function of GAM281 is therefore inhibition of

LOC155066 (Accession XP_088142.4) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC155066.

[34302] LOC157931 (Accession XP_098845.1) is another GAM281 target gene, herein designated TARGET GENE. LOC157931 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC157931, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157931 BINDING SITE, designated SEQ ID:9709, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34303] Another function of GAM281 is therefore inhibition of LOC157931 (Accession XP_098845.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157931.

[34304] LOC158014 (Accession XP_088442.1) is another GAM281 target gene, herein designated TARGET GENE. LOC158014 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC158014, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158014 BINDING SITE, designated SEQ ID:2542, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34305] Another function of GAM281 is therefore inhibition of LOC158014 (Accession XP_088442.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158014.

[34306] LOC158228 (Accession XP_098903.4) is another GAM281 target gene, herein designated TARGET GENE. LOC158228 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC158228, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158228 BINDING SITE, designated SEQ ID:5779, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34307] Another function of GAM281 is therefore inhibition of LOC158228 (Accession XP_098903.4) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158228.

[34308] LOC158310 (Accession XP_098919.1) is another GAM281 target gene, herein designated TARGET GENE. LOC158310 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC158310, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158310 BINDING SITE, designated SEQ ID:14859, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34309] Another function of GAM281 is therefore inhibition of LOC158310 (Accession XP_098919.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158310.

[34310] LOC158402 (Accession XP_098936.1) is another GAM281 target gene, herein designated TARGET GENE. LOC158402 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC158402, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158402 BINDING SITE, designated SEQ ID:17964, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34311] Another function of GAM281 is therefore inhibition of LOC158402 (Accession XP_098936.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158402.

[34312] LOC158436 (Accession XP_098942.1) is another GAM281 target gene, herein designated TARGET GENE. LOC158436 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC158436, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158436 BINDING SITE, designated SEQ ID:1263, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34313] Another function of GAM281 is therefore inhibition of LOC158436 (Accession XP_098942.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC158436.

[34314] LOC158476 (Accession XP_098955.1) is another GAM281 target gene, herein designated TARGET GENE. LOC158476 BINDING SITE1 and LOC158476 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC158476, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158476 BINDING SITE1 and LOC158476 BINDING SITE2, designated SEQ ID:17016 and SEQ ID:935 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34315] Another function of GAM281 is therefore inhibition of LOC158476 (Accession XP_098955.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158476.

[34316] LOC158563 (Accession XP_088606.1) is another GAM281 target gene, herein designated TARGET GENE. LOC158563 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC158563, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158563 BINDING SITE, designated SEQ ID:3426, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34317] Another function of GAM281 is therefore inhibition of LOC158563 (Accession XP_088606.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158563.

[34318] LOC158572 (Accession XP_088608.1) is another GAM281 target gene, herein designated TARGET GENE. LOC158572 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC158572, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158572 BINDING SITE, designated SEQ ID:12003, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34319] Another function of GAM281 is therefore inhibition of LOC158572 (Accession XP_088608.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158572.

[34320] LOC158668 (Accession XP_045161.1) is another GAM281 target gene, herein designated TARGET GENE. LOC158668 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC158668, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158668 BINDING SITE, designated SEQ ID:16260, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34321] Another function of GAM281 is therefore inhibition of LOC158668 (Accession XP_045161.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC158668.

[34322] LOC160897 (Accession XP_090573.3) is another GAM281 target gene, herein designated TARGET GENE. LOC160897 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC160897, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC160897 BINDING SITE, designated SEQ ID:17208, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34323] Another function of GAM281 is therefore inhibition of LOC160897 (Accession XP_090573.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC160897.

[34324] LOC161247 (Accession XP_090783.3) is another GAM281 target gene, herein designated TARGET GENE. LOC161247 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC161247, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC161247 BINDING SITE, designated SEQ ID:16016, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34325] Another function of GAM281 is therefore inhibition of LOC161247 (Accession XP_090783.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC161247.

[34326] LOC162427 (Accession XP_091549.3) is another GAM281 target gene, herein designated TARGET GENE. LOC162427 BINDING SITE1 and LOC162427 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by LOC162427, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC162427 BINDING SITE1 and LOC162427 BINDING SITE2, designated SEQ ID:12068 and SEQ ID:12068 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34327] Another function of GAM281 is therefore inhibition of LOC162427 (Accession XP_091549.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC162427.

[34328] LOC162427 (Accession NP_835227.1) is another GAM281 target gene, herein designated TARGET GENE. LOC162427 BINDING SITE1 and LOC162427 BINDING SITE2 are target binding sites found in untranslated regions of multiple

transcripts of mRNA encoded by LOC162427, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC162427 BINDING SITE1 and LOC162427 BINDING SITE2, designated SEQ ID:8231 and SEQ ID:8231 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34329] Another function of GAM281 is therefore inhibition of LOC162427 (Accession NP_835227.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC162427.

[34330] LOC162962 (Accession XP_091886.7) is another GAM281 target gene, herein designated TARGET GENE. LOC162962 BINDING SITE1 and LOC162962 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC162962, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC162962 BINDING SITE1 and LOC162962 BINDING SITE2, designated SEQ ID:3249 and SEQ ID:13131 respectively, to the nucleotide se-

quence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34331] Another function of GAM281 is therefore inhibition of LOC162962 (Accession XP_091886.7) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC162962.

[34332] LOC162967 (Accession XP_091890.6) is another GAM281 target gene, herein designated TARGET GENE. LOC162967 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC162967, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC162967 BINDING SITE, designated SEQ ID:13831, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34333] Another function of GAM281 is therefore inhibition of LOC162967 (Accession XP_091890.6) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC162967.

[34334] LOC163227 (Accession NP_775802.1) is another GAM281

target gene, herein designated TARGET GENE. LOC163227 BINDING SITE1 and LOC163227 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC163227, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC163227 BINDING SITE1 and LOC163227 BINDING SITE2, designated SEQ ID:11854 and SEQ ID:9147 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34335] Another function of GAM281 is therefore inhibition of LOC163227 (Accession NP_775802.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC163227.

[34336] LOC164091 (Accession XP_089356.1) is another GAM281 target gene, herein designated TARGET GENE. LOC164091 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC164091, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC164091 BINDING SITE, designated SEQ ID:7989, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34337] Another function of GAM281 is therefore inhibition of LOC164091 (Accession XP_089356.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC164091.

[34338] LOC168002 (Accession XP_094794.2) is another GAM281 target gene, herein designated TARGET GENE. LOC168002 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC168002, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC168002 BINDING SITE, designated SEQ ID:3971, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34339] Another function of GAM281 is therefore inhibition of LOC168002 (Accession XP_094794.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC168002.

[34340] LOC168451 (Accession XP_095114.2) is another GAM281 target gene, herein designated TARGET GENE. LOC168451 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC168451, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC168451 BINDING SITE, designated SEQ ID:19786, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34341] Another function of GAM281 is therefore inhibition of LOC168451 (Accession XP_095114.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC168451.

[34342] LOC170409 (Accession XP_096330.1) is another GAM281 target gene, herein designated TARGET GENE. LOC170409 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC170409, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC170409 BINDING SITE, designated SEQ ID:15561, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34343] Another function of GAM281 is therefore inhibition of LOC170409 (Accession XP_096330.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC170409.

[34344] LOC196264 (Accession XP_113683.1) is another GAM281 target gene, herein designated TARGET GENE. LOC196264 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC196264, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC196264 BINDING SITE, designated SEQ ID:2452, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34345] Another function of GAM281 is therefore inhibition of LOC196264 (Accession XP_113683.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC196264.

[34346] LOC197358 (Accession XP_113872.2) is another GAM281

target gene, herein designated TARGET GENE. LOC197358 BINDING SITE1 and LOC197358 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC197358, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC197358 BINDING SITE1 and LOC197358 BINDING SITE2, designated SEQ ID:6387 and SEQ ID:4625 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34347] Another function of GAM281 is therefore inhibition of LOC197358 (Accession XP_113872.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC197358.

[34348] LOC199725 (Accession XP_117119.1) is another GAM281 target gene, herein designated TARGET GENE. LOC199725 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC199725, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC199725 BINDING SITE, designated SEQ ID:10884, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34349] Another function of GAM281 is therefore inhibition of LOC199725 (Accession XP_117119.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC199725.

[34350] LOC199899 (Accession XP_117153.1) is another GAM281 target gene, herein designated TARGET GENE. LOC199899 BINDING SITE1 and LOC199899 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC199899, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC199899 BINDING SITE1 and LOC199899 BINDING SITE2, designated SEQ ID:5253 and SEQ ID:8292 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34351] Another function of GAM281 is therefore inhibition of LOC199899 (Accession XP_117153.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC199899.

[34352] LOC199906 (Accession XP_114052.1) is another GAM281 target gene, herein designated TARGET GENE. LOC199906 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC199906, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC199906 BINDING SITE, designated SEQ ID:19756, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34353] Another function of GAM281 is therefore inhibition of LOC199906 (Accession XP_114052.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC199906.

[34354] LOC200169 (Accession XP_117200.1) is another GAM281 target gene, herein designated TARGET GENE. LOC200169 BINDING SITE1 and LOC200169 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by LOC200169, corresponding to target binding sites such as BINDING SITE I, BIND-

ING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200169 BINDING SITE1 and LOC200169 BINDING SITE2, designated SEQ ID:6122 and SEQ ID:5066 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34355] Another function of GAM281 is therefore inhibition of LOC200169 (Accession XP_117200.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200169.

[34356] LOC200860 (Accession XP_117289.1) is another GAM281 target gene, herein designated TARGET GENE. LOC200860 BINDING SITE1 and LOC200860 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC200860, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200860 BINDING SITE1 and LOC200860 BINDING SITE2, designated SEQ ID:4175 and SEQ ID:12075 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34357] Another function of GAM281 is therefore inhibition of LOC200860 (Accession XP_117289.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200860.

[34358] LOC200895 (Accession NP_789785.1) is another GAM281 target gene, herein designated TARGET GENE. LOC200895 BINDING SITE1 and LOC200895 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC200895, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200895 BINDING SITE1 and LOC200895 BINDING SITE2, designated SEQ ID:17681 and SEQ ID:11863 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34359] Another function of GAM281 is therefore inhibition of LOC200895 (Accession NP_789785.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200895.

[34360] LOC200916 (Accession XP_114317.3) is another GAM281

target gene, herein designated TARGET GENE. LOC200916 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC200916, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200916 BINDING SITE, designated SEQ ID:3465, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34361] Another function of GAM281 is therefore inhibition of LOC200916 (Accession XP_114317.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200916.

[34362] LOC201164 (Accession NP_849158.1) is another GAM281 target gene, herein designated TARGET GENE. LOC201164 BINDING SITE1 and LOC201164 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by LOC201164, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201164 BINDING SITE1 and LOC201164 BINDING

SITE2, designated SEQ ID:16993 and SEQ ID:13384 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34363] Another function of GAM281 is therefore inhibition of LOC201164 (Accession NP_849158.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201164.

[34364] LOC201292 (Accession NP_775818.1) is another GAM281 target gene, herein designated TARGET GENE. LOC201292 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC201292, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201292 BINDING SITE, designated SEQ ID:4556, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34365] Another function of GAM281 is therefore inhibition of LOC201292 (Accession NP_775818.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201292.

[34366] LOC201562 (Accession XP_114343.2) is another GAM281 target gene, herein designated TARGET GENE. LOC201562 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC201562, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201562 BINDING SITE, designated SEQ ID:15044, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34367] Another function of GAM281 is therefore inhibition of LOC201562 (Accession XP_114343.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201562.

[34368] LOC201725 (Accession XP_114370.1) is another GAM281 target gene, herein designated TARGET GENE. LOC201725 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC201725, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201725 BINDING SITE, designated SEQ ID:5492, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34369] Another function of GAM281 is therefore inhibition of LOC201725 (Accession XP_114370.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201725.

[34370] LOC202400 (Accession XP_117397.1) is another GAM281 target gene, herein designated TARGET GENE. LOC202400 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC202400, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202400 BINDING SITE, designated SEQ ID:9145, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34371] Another function of GAM281 is therefore inhibition of LOC202400 (Accession XP_117397.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202400.

[34372] LOC202404 (Accession XP_114481.4) is another GAM281

target gene, herein designated TARGET GENE. LOC202404 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC202404, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202404 BINDING SITE, designated SEQ ID:18628, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34373] Another function of GAM281 is therefore inhibition of LOC202404 (Accession XP_114481.4) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202404.

[34374] LOC202460 (Accession XP_114493.1) is another GAM281 target gene, herein designated TARGET GENE. LOC202460 BINDING SITE1 and LOC202460 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC202460, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202460 BINDING SITE1 and LOC202460 BINDING SITE2, designated SEQ ID:16450

and SEQ ID:11010 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34375] Another function of GAM281 is therefore inhibition of LOC202460 (Accession XP_114493.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC202460.

[34376] LOC202934 (Accession XP_117486.2) is another GAM281 target gene, herein designated TARGET GENE. LOC202934 BINDING SITE1 and LOC202934 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC202934, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC202934 BINDING SITE1 and LOC202934 BINDING SITE2, designated SEQ ID:4820 and SEQ ID:1729 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34377] Another function of GAM281 is therefore inhibition of LOC202934 (Accession XP_117486.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC202934.

[34378] LOC203547 (Accession XP_114719.1) is another GAM281 target gene, herein designated TARGET GENE. LOC203547 BINDING SITE1 and LOC203547 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC203547, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC203547 BINDING SITE1 and LOC203547 BINDING SITE2, designated SEQ ID:9545 and SEQ ID:2351 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34379] Another function of GAM281 is therefore inhibition of LOC203547 (Accession XP_114719.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC203547.

[34380] LOC204288 (Accession XP_115295.1) is another GAM281 target gene, herein designated TARGET GENE. LOC204288 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC204288, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC204288 BINDING SITE, designated SEQ ID:10724, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34381] Another function of GAM281 is therefore inhibition of LOC204288 (Accession XP_115295.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC204288.

[34382] LOC219293 (Accession XP_166599.2) is another GAM281 target gene, herein designated TARGET GENE. LOC219293 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC219293, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219293 BINDING SITE, designated SEQ ID:19361, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34383] Another function of GAM281 is therefore inhibition of LOC219293 (Accession XP_166599.2) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219293.

[34384] LOC219700 (Accession XP_167570.1) is another GAM281 target gene, herein designated TARGET GENE. LOC219700 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC219700, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219700 BINDING SITE, designated SEQ ID:2410, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34385] Another function of GAM281 is therefore inhibition of LOC219700 (Accession XP_167570.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219700.

[34386] LOC219731 (Accession XP_167596.1) is another GAM281 target gene, herein designated TARGET GENE. LOC219731 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC219731, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219731 BINDING SITE, designated SEQ ID:4678, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34387] Another function of GAM281 is therefore inhibition of LOC219731 (Accession XP_167596.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219731.

[34388] LOC219735 (Accession XP_167601.1) is another GAM281 target gene, herein designated TARGET GENE. LOC219735 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC219735, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219735 BINDING SITE, designated SEQ ID:18913, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34389] Another function of GAM281 is therefore inhibition of LOC219735 (Accession XP_167601.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC219735.

[34390] LOC219894 (Accession XP_167782.1) is another GAM281 target gene, herein designated TARGET GENE. LOC219894 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC219894, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC219894 BINDING SITE, designated SEQ ID:14588, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34391] Another function of GAM281 is therefore inhibition of LOC219894 (Accession XP_167782.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC219894.

[34392] LOC220074 (Accession NP_660352.1) is another GAM281 target gene, herein designated TARGET GENE. LOC220074 BINDING SITE1 through LOC220074 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC220074, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC220074 BINDING SITE1 through LOC220074 BINDING SITE3, designated SEQ ID:6497, SEQ ID:9147 and SEQ ID:16838 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34393] Another function of GAM281 is therefore inhibition of LOC220074 (Accession NP_660352.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC220074.

[34394] LOC221663 (Accession XP_168131.1) is another GAM281 target gene, herein designated TARGET GENE. LOC221663 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC221663, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221663 BINDING SITE, designated SEQ ID:1939, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34395] Another function of GAM281 is therefore inhibition of LOC221663 (Accession XP_168131.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221663.

[34396] LOC221889 (Accession XP_166513.1) is another GAM281 target gene, herein designated TARGET GENE. LOC221889 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC221889, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221889 BINDING SITE, designated SEQ ID:3555, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34397] Another function of GAM281 is therefore inhibition of LOC221889 (Accession XP_166513.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221889.

[34398] LOC221946 (Accession XP_168340.1) is another GAM281 target gene, herein designated TARGET GENE. LOC221946 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC221946, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221946 BINDING SITE, designated SEQ ID:15948, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34399] Another function of GAM281 is therefore inhibition of LOC221946 (Accession XP_168340.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221946.

[34400] LOC221960 (Accession XP_165859.1) is another GAM281 target gene, herein designated TARGET GENE. LOC221960 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC221960, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221960 BINDING SITE, designated SEQ ID:14860, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34401] Another function of GAM281 is therefore inhibition of LOC221960 (Accession XP_165859.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC221960.

[34402] LOC221964 (Accession XP_168342.1) is another GAM281 target gene, herein designated TARGET GENE. LOC221964 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC221964, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221964 BINDING SITE, designated SEQ ID:17029, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34403] Another function of GAM281 is therefore inhibition of LOC221964 (Accession XP_168342.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221964.

[34404] LOC222031 (Accession XP_168371.1) is another GAM281 target gene, herein designated TARGET GENE. LOC222031 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC222031, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC222031 BINDING SITE, designated SEQ ID:7700, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34405] Another function of GAM281 is therefore inhibition of LOC222031 (Accession XP_168371.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222031.

[34406] LOC222057 (Accession XP_166594.2) is another GAM281 target gene, herein designated TARGET GENE. LOC222057 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC222057, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC222057 BINDING SITE, designated SEQ ID:12803, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34407] Another function of GAM281 is therefore inhibition of LOC222057 (Accession XP_166594.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC222057.

[34408] LOC222068 (Accession XP_166556.1) is another GAM281 target gene, herein designated TARGET GENE. LOC222068 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC222068, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC222068 BINDING SITE, designated SEQ ID:3232, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34409] Another function of GAM281 is therefore inhibition of LOC222068 (Accession XP_166556.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222068.

[34410] LOC222159 (Accession XP_212100.1) is another GAM281 target gene, herein designated TARGET GENE. LOC222159 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by LOC222159, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of LOC222159 BINDING SITE, designated SEQ ID:16228, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34411] Another function of GAM281 is therefore inhibition of LOC222159 (Accession XP_212100.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC222159.

[34412] LOC253612 (Accession XP_172985.2) is another GAM281 target gene, herein designated TARGET GENE. LOC253612 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC253612, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253612 BINDING SITE, designated SEQ ID:5487, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34413] Another function of GAM281 is therefore inhibition of LOC253612 (Accession XP_172985.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC253612.

[34414] LOC253805 (Accession XP_172854.1) is another GAM281 target gene, herein designated TARGET GENE. LOC253805 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC253805, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253805 BINDING SITE, designated SEQ ID:4532, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34415] Another function of GAM281 is therefore inhibition of LOC253805 (Accession XP_172854.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253805.

[34416] LOC253992 (Accession XP_172953.2) is another GAM281 target gene, herein designated TARGET GENE. LOC253992 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC253992, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC253992 BINDING SITE, designated SEQ ID:3617, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34417] Another function of GAM281 is therefore inhibition of LOC253992 (Accession XP_172953.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253992.

[34418] LOC254875 (Accession XP_171170.1) is another GAM281 target gene, herein designated TARGET GENE. LOC254875 BINDING SITE1 and LOC254875 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC254875, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC254875 BINDING SITE1 and LOC254875 BINDING SITE2, designated SEQ ID:14560 and SEQ ID:6188 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34419] Another function of GAM281 is therefore inhibition of LOC254875 (Accession XP_171170.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC254875.

[34420] LOC255031 (Accession XP_173187.1) is another GAM281 target gene, herein designated TARGET GENE. LOC255031 BINDING SITE1 and LOC255031 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC255031, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255031 BINDING SITE1 and LOC255031 BINDING SITE2, designated SEQ ID:13629 and SEQ ID:3261 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34421] Another function of GAM281 is therefore inhibition of LOC255031 (Accession XP_173187.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255031.

[34422] LOC255177 (Accession XP_172941.1) is another GAM281 target gene, herein designated TARGET GENE. LOC255177 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC255177, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255177 BINDING SITE, designated SEQ ID:6294, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34423] Another function of GAM281 is therefore inhibition of LOC255177 (Accession XP_172941.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255177.

[34424] LOC255458 (Accession XP_173150.1) is another GAM281 target gene, herein designated TARGET GENE. LOC255458 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC255458, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255458 BINDING SITE, designated SEQ ID:6365, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34425] Another function of GAM281 is therefore inhibition of LOC255458 (Accession XP_173150.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255458.

[34426] LOC255488 (Accession XP_172581.2) is another GAM281 target gene, herein designated TARGET GENE. LOC255488 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC255488, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255488 BINDING SITE, designated SEQ ID:3150, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34427] Another function of GAM281 is therefore inhibition of LOC255488 (Accession XP_172581.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255488.

[34428] LOC255736 (Accession XP_170898.2) is another GAM281 target gene, herein designated TARGET GENE. LOC255736 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC255736, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255736 BINDING SITE, designated SEQ ID:2873, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34429] Another function of GAM281 is therefore inhibition of LOC255736 (Accession XP_170898.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC255736.

[34430] LOC255975 (Accession XP_171083.2) is another GAM281 target gene, herein designated TARGET GENE. LOC255975 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC255975, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC255975 BINDING SITE, designated SEQ ID:12803, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34431] Another function of GAM281 is therefore inhibition of LOC255975 (Accession XP_171083.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC255975.

[34432] LOC256614 (Accession XP_172864.1) is another GAM281 target gene, herein designated TARGET GENE. LOC256614 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC256614, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC256614 BINDING SITE, designated SEQ ID:7385, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34433] Another function of GAM281 is therefore inhibition of LOC256614 (Accession XP_172864.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256614.

[34434] LOC282905 (Accession XP_212606.1) is another GAM281 target gene, herein designated TARGET GENE. LOC282905 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC282905, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC282905 BINDING SITE, designated SEQ ID:986, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34435] Another function of GAM281 is therefore inhibition of LOC282905 (Accession XP_212606.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282905.

[34436] LOC282943 (Accession XP_212647.1) is another GAM281 target gene, herein designated TARGET GENE. LOC282943 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC282943, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282943 BINDING SITE, designated SEQ ID:986, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34437] Another function of GAM281 is therefore inhibition of LOC282943 (Accession XP_212647.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC282943.

[34438] LOC282963 (Accession XP_210834.1) is another GAM281 target gene, herein designated TARGET GENE. LOC282963 BINDING SITE1 and LOC282963 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC282963, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282963 BINDING SITE1 and LOC282963 BINDING SITE2, designated SEQ ID:814 and SEQ ID:2675 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34439] Another function of GAM281 is therefore inhibition of LOC282963 (Accession XP_210834.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282963.

[34440] LOC282972 (Accession XP_210837.1) is another GAM281 target gene, herein designated TARGET GENE. LOC282972 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC282972, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282972 BINDING SITE, designated SEQ ID:18172, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34441] Another function of GAM281 is therefore inhibition of LOC282972 (Accession XP_210837.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282972.

[34442] LOC282987 (Accession XP_210845.1) is another GAM281 target gene, herein designated TARGET GENE. LOC282987 BINDING SITE1 and LOC282987 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC282987, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282987 BINDING SITE1 and LOC282987 BINDING SITE2, designated SEQ ID:16541 and SEQ ID:12068 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34443] Another function of GAM281 is therefore inhibition of

LOC282987 (Accession XP_210845.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282987.

[34444] LOC282997 (Accession XP_208473.1) is another GAM281 target gene, herein designated TARGET GENE. LOC282997 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC282997, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC282997 BINDING SITE, designated SEQ ID:11798, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34445] Another function of GAM281 is therefore inhibition of LOC282997 (Accession XP_208473.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC282997.

[34446] LOC283031 (Accession XP_210859.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283031 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283031, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283031 BINDING SITE, designated SEQ ID:6384, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34447] Another function of GAM281 is therefore inhibition of LOC283031 (Accession XP_210859.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283031.

[34448] LOC283035 (Accession XP_208488.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283035 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283035, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283035 BINDING SITE, designated SEQ ID:1940, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34449] Another function of GAM281 is therefore inhibition of LOC283035 (Accession XP_208488.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283035.

[34450] LOC283047 (Accession XP_210870.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283047 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283047, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283047 BINDING SITE, designated SEQ ID:17587, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34451] Another function of GAM281 is therefore inhibition of LOC283047 (Accession XP_210870.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283047.

[34452] LOC283061 (Accession XP_210875.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283061 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283061, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283061 BINDING SITE, designated SEQ ID:7252, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34453] Another function of GAM281 is therefore inhibition of LOC283061 (Accession XP_210875.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283061.

[34454] LOC283087 (Accession XP_208509.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283087 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283087, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283087 BINDING SITE, designated SEQ ID:4176, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34455] Another function of GAM281 is therefore inhibition of LOC283087 (Accession XP_208509.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283087.

[34456] LOC283089 (Accession XP_210885.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283089 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283089, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283089 BINDING SITE, designated SEQ ID:2219, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34457] Another function of GAM281 is therefore inhibition of LOC283089 (Accession XP_210885.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283089.

[34458] LOC283119 (Accession XP_210895.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283119 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283119, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC283119 BINDING SITE, designated SEQ ID:16397, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34459] Another function of GAM281 is therefore inhibition of LOC283119 (Accession XP_210895.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283119.

[34460] LOC283130 (Accession XP_208525.3) is another GAM281 target gene, herein designated TARGET GENE. LOC283130 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283130, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283130 BINDING SITE, designated SEQ ID:5323, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34461] Another function of GAM281 is therefore inhibition of LOC283130 (Accession XP_208525.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC283130.

[34462] LOC283140 (Accession XP_210911.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283140 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283140, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283140 BINDING SITE, designated SEQ ID:12544, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34463] Another function of GAM281 is therefore inhibition of LOC283140 (Accession XP_210911.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283140.

[34464] LOC283143 (Accession XP_210920.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283143 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283143, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC283143 BINDING SITE, designated SEQ ID:2650, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34465] Another function of GAM281 is therefore inhibition of LOC283143 (Accession XP_210920.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283143.

[34466] LOC283152 (Accession XP_210917.2) is another GAM281 target gene, herein designated TARGET GENE. LOC283152 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283152, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283152 BINDING SITE, designated SEQ ID:19812, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34467] Another function of GAM281 is therefore inhibition of LOC283152 (Accession XP_210917.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283152.

[34468] LOC283170 (Accession XP_208535.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283170 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283170, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283170 BINDING SITE, designated SEQ ID:4979, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34469] Another function of GAM281 is therefore inhibition of LOC283170 (Accession XP_208535.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283170.

[34470] LOC283177 (Accession XP_210903.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283177 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283177, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283177 BINDING SITE, designated SEQ ID:15574, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34471] Another function of GAM281 is therefore inhibition of LOC283177 (Accession XP_210903.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283177.

[34472] LOC283215 (Accession XP_208555.2) is another GAM281 target gene, herein designated TARGET GENE. LOC283215 BINDING SITE1 and LOC283215 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283215, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283215 BINDING SITE1 and LOC283215 BINDING SITE2, designated SEQ ID:10112 and SEQ ID:8144 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34473] Another function of GAM281 is therefore inhibition of LOC283215 (Accession XP_208555.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC283215.

[34474] LOC283241 (Accession NP_787089.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283241 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283241, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283241 BINDING SITE, designated SEQ ID:9525, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34475] Another function of GAM281 is therefore inhibition of LOC283241 (Accession NP_787089.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283241.

[34476] LOC283262 (Accession XP_210952.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283262 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283262, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC283262 BINDING SITE, designated SEQ ID:8223, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34477] Another function of GAM281 is therefore inhibition of LOC283262 (Accession XP_210952.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283262.

[34478] LOC283278 (Accession XP_210961.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283278 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283278, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283278 BINDING SITE, designated SEQ ID:9036, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34479] Another function of GAM281 is therefore inhibition of LOC283278 (Accession XP_210961.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283278.

[34480] LOC283293 (Accession XP_210962.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283293 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283293, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283293 BINDING SITE, designated SEQ ID:17952, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34481] Another function of GAM281 is therefore inhibition of LOC283293 (Accession XP_210962.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283293.

[34482] LOC283299 (Accession XP_210965.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283299 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283299, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283299 BINDING SITE, designated SEQ ID:9585, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34483] Another function of GAM281 is therefore inhibition of LOC283299 (Accession XP_210965.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283299.

[34484] LOC283329 (Accession XP_210978.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283329 BINDING SITE1 and LOC283329 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283329, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283329 BINDING SITE1 and LOC283329 BINDING SITE2, designated SEQ ID:2201 and SEQ ID:12183 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34485] Another function of GAM281 is therefore inhibition of LOC283329 (Accession XP_210978.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC283329.

[34486] LOC283335 (Accession XP_210981.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283335 BINDING SITE1 and LOC283335 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283335, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283335 BINDING SITE1 and LOC283335 BINDING SITE2, designated SEQ ID:16144 and SEQ ID:2143 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34487] Another function of GAM281 is therefore inhibition of LOC283335 (Accession XP_210981.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283335.

[34488] LOC283377 (Accession XP_208647.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283377 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283377, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283377 BINDING SITE, designated SEQ ID:8232, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34489] Another function of GAM281 is therefore inhibition of LOC283377 (Accession XP_208647.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283377.

[34490] LOC283387 (Accession XP_211007.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283387 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283387, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283387 BINDING SITE, designated SEQ ID:7265, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34491] Another function of GAM281 is therefore inhibition of LOC283387 (Accession XP_211007.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283387.

[34492] LOC283394 (Accession XP_211021.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283394 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283394, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283394 BINDING SITE, designated SEQ ID:1730, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34493] Another function of GAM281 is therefore inhibition of LOC283394 (Accession XP_211021.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283394.

[34494] LOC283395 (Accession XP_211020.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283395 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283395, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC283395 BINDING SITE, designated SEQ ID:9003, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34495] Another function of GAM281 is therefore inhibition of LOC283395 (Accession XP_211020.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283395.

[34496] LOC283400 (Accession XP_211024.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283400 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283400, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283400 BINDING SITE, designated SEQ ID:19206, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34497] Another function of GAM281 is therefore inhibition of LOC283400 (Accession XP_211024.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC283400.

[34498] LOC283432 (Accession XP_211032.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283432 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283432, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283432 BINDING SITE, designated SEQ ID:16658, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34499] Another function of GAM281 is therefore inhibition of LOC283432 (Accession XP_211032.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283432.

[34500] LOC283434 (Accession XP_211034.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283434 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283434, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC283434 BINDING SITE, designated SEQ ID:16366, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34501] Another function of GAM281 is therefore inhibition of LOC283434 (Accession XP_211034.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283434.

[34502] LOC283441 (Accession XP_211043.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283441 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283441, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283441 BINDING SITE, designated SEQ ID:2220, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34503] Another function of GAM281 is therefore inhibition of LOC283441 (Accession XP_211043.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283441.

[34504] LOC283442 (Accession XP_211037.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283442 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283442, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283442 BINDING SITE, designated SEQ ID:10032, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34505] Another function of GAM281 is therefore inhibition of LOC283442 (Accession XP_211037.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283442.

[34506] LOC283445 (Accession XP_211044.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283445 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283445, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283445 BINDING SITE, designated SEQ ID:5683, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34507] Another function of GAM281 is therefore inhibition of LOC283445 (Accession XP_211044.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283445.

[34508] LOC283452 (Accession XP_208679.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283452 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283452, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283452 BINDING SITE, designated SEQ ID:7397, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34509] Another function of GAM281 is therefore inhibition of LOC283452 (Accession XP_208679.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283452.

[34510] LOC283454 (Accession XP_211049.1) is another GAM281

target gene, herein designated TARGET GENE. LOC283454 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283454, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283454 BINDING SITE, designated SEQ ID:14861, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34511] Another function of GAM281 is therefore inhibition of LOC283454 (Accession XP_211049.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283454.

[34512] LOC283467 (Accession XP_211050.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283467 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283467, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283467 BINDING SITE, designated SEQ ID:13967, to the nucleotide sequence of GAM281 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:278.

[34513] Another function of GAM281 is therefore inhibition of LOC283467 (Accession XP_211050.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283467.

[34514] LOC283475 (Accession XP_211056.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283475 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283475, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283475 BINDING SITE, designated SEQ ID:9892, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34515] Another function of GAM281 is therefore inhibition of LOC283475 (Accession XP_211056.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283475.

[34516] LOC283484 (Accession XP_211053.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283484

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283484, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283484 BINDING SITE, designated SEQ ID:17710, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34517] Another function of GAM281 is therefore inhibition of LOC283484 (Accession XP_211053.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283484.

[34518] LOC283487 (Accession XP_211062.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283487 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC283487, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283487 BINDING SITE, designated SEQ ID:7371, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:278.

[34519] Another function of GAM281 is therefore inhibition of LOC283487 (Accession XP_211062.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283487.

[34520] LOC283507 (Accession XP_211075.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283507 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283507, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283507 BINDING SITE, designated SEQ ID:12075, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34521] Another function of GAM281 is therefore inhibition of LOC283507 (Accession XP_211075.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283507.

[34522] LOC283520 (Accession XP_211071.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283520

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283520, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283520 BINDING SITE, designated SEQ ID:2025, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34523] Another function of GAM281 is therefore inhibition of LOC283520 (Accession XP_211071.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283520.

[34524] LOC283534 (Accession XP_211083.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283534 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283534, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283534 BINDING SITE, designated SEQ ID:3199, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34525] Another function of GAM281 is therefore inhibition of LOC283534 (Accession XP_211083.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283534.

[34526] LOC283566 (Accession XP_211114.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283566 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283566, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283566 BINDING SITE, designated SEQ ID:15869, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34527] Another function of GAM281 is therefore inhibition of LOC283566 (Accession XP_211114.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283566.

[34528] LOC283570 (Accession XP_211118.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283570 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC283570, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283570 BINDING SITE, designated SEQ ID:13652, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34529] Another function of GAM281 is therefore inhibition of LOC283570 (Accession XP_211118.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283570.

[34530] LOC283575 (Accession XP_211095.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283575 BINDING SITE1 and LOC283575 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283575, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283575 BINDING SITE1 and LOC283575 BINDING SITE2, designated SEQ ID:10067 and SEQ ID:6183 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:278.

[34531] Another function of GAM281 is therefore inhibition of LOC283575 (Accession XP_211095.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283575.

[34532] LOC283585 (Accession XP_294741.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283585 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283585, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283585 BINDING SITE, designated SEQ ID:10466, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34533] Another function of GAM281 is therefore inhibition of LOC283585 (Accession XP_294741.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283585.

[34534] LOC283588 (Accession NP_787093.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283588

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283588, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283588 BINDING SITE, designated SEQ ID:10638, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34535] Another function of GAM281 is therefore inhibition of LOC283588 (Accession NP_787093.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283588.

[34536] LOC283624 (Accession XP_211126.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283624 BINDING SITE1 and LOC283624 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283624, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283624 BINDING SITE1 and LOC283624 BINDING SITE2, designated SEQ ID:4420 and SEQ ID:15245 respectively, to the nucleotide se-

quence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34537] Another function of GAM281 is therefore inhibition of LOC283624 (Accession XP_211126.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283624.

[34538] LOC283637 (Accession XP_211134.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283637 BINDING SITE1 and LOC283637 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283637, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283637 BINDING SITE1 and LOC283637 BINDING SITE2, designated SEQ ID:3581 and SEQ ID:14859 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34539] Another function of GAM281 is therefore inhibition of LOC283637 (Accession XP_211134.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC283637.

[34540] LOC283641 (Accession XP_208764.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283641 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283641, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283641 BINDING SITE, designated SEQ ID:17964, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34541] Another function of GAM281 is therefore inhibition of LOC283641 (Accession XP_208764.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283641.

[34542] LOC283663 (Accession XP_211147.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283663 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283663, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC283663 BINDING SITE, designated SEQ ID:16674, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34543] Another function of GAM281 is therefore inhibition of LOC283663 (Accession XP_211147.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283663.

[34544] LOC283664 (Accession XP_208773.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283664 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283664, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283664 BINDING SITE, designated SEQ ID:8450, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34545] Another function of GAM281 is therefore inhibition of LOC283664 (Accession XP_208773.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283664.

[34546] LOC283672 (Accession XP_211152.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283672 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283672, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283672 BINDING SITE, designated SEQ ID:1730, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34547] Another function of GAM281 is therefore inhibition of LOC283672 (Accession XP_211152.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283672.

[34548] LOC283687 (Accession NP_787094.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283687 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283687, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283687 BINDING SITE, designated SEQ ID:11904, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34549] Another function of GAM281 is therefore inhibition of LOC283687 (Accession NP_787094.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283687.

[34550] LOC283689 (Accession XP_211165.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283689 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283689, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283689 BINDING SITE, designated SEQ ID:3654, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34551] Another function of GAM281 is therefore inhibition of LOC283689 (Accession XP_211165.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283689.

[34552] LOC283693 (Accession XP_208788.1) is another GAM281

target gene, herein designated TARGET GENE. LOC283693 BINDING SITE1 and LOC283693 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283693, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283693 BINDING SITE1 and LOC283693 BINDING SITE2, designated SEQ ID:5305 and SEQ ID:16069 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34553] Another function of GAM281 is therefore inhibition of LOC283693 (Accession XP_208788.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283693.

[34554] LOC283701 (Accession XP_211170.3) is another GAM281 target gene, herein designated TARGET GENE. LOC283701 BINDING SITE1 and LOC283701 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283701, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of LOC283701 BINDING SITE1 and LOC283701 BINDING SITE2, designated SEQ ID:13716 and SEQ ID:14381 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34555] Another function of GAM281 is therefore inhibition of LOC283701 (Accession XP_211170.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283701.

[34556] LOC283706 (Accession XP_208804.3) is another GAM281 target gene, herein designated TARGET GENE. LOC283706 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283706, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283706 BINDING SITE, designated SEQ ID:5985, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34557] Another function of GAM281 is therefore inhibition of LOC283706 (Accession XP_208804.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283706.

[34558] LOC283715 (Accession XP_208800.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283715 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283715, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283715 BINDING SITE, designated SEQ ID:15912, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34559] Another function of GAM281 is therefore inhibition of LOC283715 (Accession XP_208800.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283715.

[34560] LOC283741 (Accession XP_208115.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283741 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283741, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC283741 BINDING SITE, designated SEQ ID:11523, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34561] Another function of GAM281 is therefore inhibition of LOC283741 (Accession XP_208115.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283741.

[34562] LOC283767 (Accession XP_208835.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283767 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283767, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283767 BINDING SITE, designated SEQ ID:12479, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34563] Another function of GAM281 is therefore inhibition of LOC283767 (Accession XP_208835.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC283767.

[34564] LOC283778 (Accession XP_211199.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283778 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283778, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283778 BINDING SITE, designated SEQ ID:4370, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34565] Another function of GAM281 is therefore inhibition of LOC283778 (Accession XP_211199.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283778.

[34566] LOC283779 (Accession XP_211198.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283779 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283779, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC283779 BINDING SITE, designated SEQ ID:17644, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34567] Another function of GAM281 is therefore inhibition of LOC283779 (Accession XP_211198.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283779.

[34568] LOC283801 (Accession XP_208122.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283801 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283801, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283801 BINDING SITE, designated SEQ ID:6265, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34569] Another function of GAM281 is therefore inhibition of LOC283801 (Accession XP_208122.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283801.

[34570] LOC283802 (Accession XP_208850.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283802 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283802, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283802 BINDING SITE, designated SEQ ID:16700, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34571] Another function of GAM281 is therefore inhibition of LOC283802 (Accession XP_208850.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283802.

[34572] LOC283810 (Accession XP_208853.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283810 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283810, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283810 BINDING SITE, designated SEQ ID:9395, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34573] Another function of GAM281 is therefore inhibition of LOC283810 (Accession XP_208853.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283810.

[34574] LOC283818 (Accession XP_211218.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283818 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283818, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283818 BINDING SITE, designated SEQ ID:9546, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34575] Another function of GAM281 is therefore inhibition of LOC283818 (Accession XP_211218.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283818.

[34576] LOC283851 (Accession XP_211229.1) is another GAM281

target gene, herein designated TARGET GENE. LOC283851 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283851, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283851 BINDING SITE, designated SEQ ID:4974, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34577] Another function of GAM281 is therefore inhibition of LOC283851 (Accession XP_211229.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283851.

[34578] LOC283856 (Accession XP_211233.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283856 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283856, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283856 BINDING SITE, designated SEQ ID:6184, to the nucleotide sequence of GAM281 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:278.

[34579] Another function of GAM281 is therefore inhibition of LOC283856 (Accession XP_211233.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283856.

[34580] LOC283857 (Accession XP_211236.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283857 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283857, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283857 BINDING SITE, designated SEQ ID:10167, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34581] Another function of GAM281 is therefore inhibition of LOC283857 (Accession XP_211236.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283857.

[34582] LOC283861 (Accession NP_787095.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283861

BINDING SITE1 through LOC283861 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC283861, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283861 BINDING SITE1 through LOC283861 BINDING SITE3, designated SEQ ID:1635, SEQ ID:1401 and SEQ ID:7476 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34583] Another function of GAM281 is therefore inhibition of LOC283861 (Accession NP_787095.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283861.

[34584] LOC283863 (Accession XP_208875.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283863 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283863, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283863 BINDING SITE, designated SEQ ID:13285, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34585] Another function of GAM281 is therefore inhibition of LOC283863 (Accession XP_208875.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283863.

[34586] LOC283887 (Accession XP_211248.2) is another GAM281 target gene, herein designated TARGET GENE. LOC283887 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283887, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283887 BINDING SITE, designated SEQ ID:18993, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34587] Another function of GAM281 is therefore inhibition of LOC283887 (Accession XP_211248.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283887.

[34588] LOC283888 (Accession XP_211249.1) is another GAM281

target gene, herein designated TARGET GENE. LOC283888 BINDING SITE1 and LOC283888 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283888, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283888 BINDING SITE1 and LOC283888 BINDING SITE2, designated SEQ ID:11072 and SEQ ID:14104 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34589] Another function of GAM281 is therefore inhibition of LOC283888 (Accession XP_211249.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283888.

[34590] LOC283889 (Accession XP_208899.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283889 BINDING SITE1 and LOC283889 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC283889, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of LOC283889 BINDING SITE1 and LOC283889 BINDING SITE2, designated SEQ ID:5525 and SEQ ID:3899 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34591] Another function of GAM281 is therefore inhibition of LOC283889 (Accession XP_208899.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283889.

[34592] LOC283894 (Accession XP_211250.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283894 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283894, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283894 BINDING SITE, designated SEQ ID:7156, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34593] Another function of GAM281 is therefore inhibition of LOC283894 (Accession XP_211250.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283894.

[34594] LOC283909 (Accession XP_211256.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283909 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283909, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283909 BINDING SITE, designated SEQ ID:7156, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34595] Another function of GAM281 is therefore inhibition of LOC283909 (Accession XP_211256.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283909.

[34596] LOC283928 (Accession XP_208909.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283928 BINDING SITE1 through LOC283928 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC283928, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283928 BINDING SITE1 through LOC283928 BINDING SITE3, designated SEQ ID:20101, SEQ ID:4703 and SEQ ID:11501 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34597] Another function of GAM281 is therefore inhibition of LOC283928 (Accession XP_208909.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283928.

[34598] LOC283929 (Accession XP_208905.2) is another GAM281 target gene, herein designated TARGET GENE. LOC283929 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283929, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283929 BINDING SITE, designated SEQ ID:15775, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34599] Another function of GAM281 is therefore inhibition of LOC283929 (Accession XP_208905.2) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283929.

[34600] LOC283954 (Accession XP_208931.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283954 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283954, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283954 BINDING SITE, designated SEQ ID:10461, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34601] Another function of GAM281 is therefore inhibition of LOC283954 (Accession XP_208931.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283954.

[34602] LOC283964 (Accession XP_208145.2) is another GAM281 target gene, herein designated TARGET GENE. LOC283964 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283964, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283964 BINDING SITE, designated SEQ ID:19569, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34603] Another function of GAM281 is therefore inhibition of LOC283964 (Accession XP_208145.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283964.

[34604] LOC283983 (Accession XP_211289.1) is another GAM281 target gene, herein designated TARGET GENE. LOC283983 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283983, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283983 BINDING SITE, designated SEQ ID:4650, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34605] Another function of GAM281 is therefore inhibition of LOC283983 (Accession XP_211289.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC283983.

[34606] LOC284001 (Accession XP_208958.2) is another GAM281 target gene, herein designated TARGET GENE. LOC284001 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284001, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284001 BINDING SITE, designated SEQ ID:18161, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34607] Another function of GAM281 is therefore inhibition of LOC284001 (Accession XP_208958.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284001.

[34608] LOC284016 (Accession XP_211298.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284016 BINDING SITE1 and LOC284016 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284016, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING

SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284016 BINDING SITE1 and LOC284016 BINDING SITE2, designated SEQ ID:3244 and SEQ ID:17923 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34609] Another function of GAM281 is therefore inhibition of LOC284016 (Accession XP_211298.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284016.

[34610] LOC284017 (Accession XP_208961.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284017 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284017, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284017 BINDING SITE, designated SEQ ID:18610, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34611] Another function of GAM281 is therefore inhibition of LOC284017 (Accession XP_208961.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284017.

[34612] LOC284019 (Accession XP_211302.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284019 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284019, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284019 BINDING SITE, designated SEQ ID:10124, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34613] Another function of GAM281 is therefore inhibition of LOC284019 (Accession XP_211302.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284019.

[34614] LOC284023 (Accession XP_208983.3) is another GAM281 target gene, herein designated TARGET GENE. LOC284023 BINDING SITE1 and LOC284023 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284023, corresponding to target binding

sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284023 BINDING SITE1 and LOC284023 BINDING SITE2, designated SEQ ID:14597 and SEQ ID:17953 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34615] Another function of GAM281 is therefore inhibition of LOC284023 (Accession XP_208983.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284023.

[34616] LOC284048 (Accession XP_208152.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284048 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284048, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284048 BINDING SITE, designated SEQ ID:10847, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34617] Another function of GAM281 is therefore inhibition of

LOC284048 (Accession XP_208152.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284048.

[34618] LOC284063 (Accession XP_208992.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284063 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284063, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284063 BINDING SITE, designated SEQ ID:6213, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34619] Another function of GAM281 is therefore inhibition of LOC284063 (Accession XP_208992.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284063.

[34620] LOC284074 (Accession XP_211321.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284074 BINDING SITE1 and LOC284074 BINDING SITE2 are target binding sites found in untranslated regions of mRNA en-

coded by LOC284074, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284074 BINDING SITE1 and LOC284074 BINDING SITE2, designated SEQ ID:1596 and SEQ ID:15531 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34621] Another function of GAM281 is therefore inhibition of LOC284074 (Accession XP_211321.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284074.

[34622] LOC284082 (Accession XP_211323.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284082 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284082, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284082 BINDING SITE, designated SEQ ID:18527, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34623] Another function of GAM281 is therefore inhibition of LOC284082 (Accession XP_211323.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284082.

[34624] LOC284095 (Accession XP_211324.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284095 BINDING SITE1 through LOC284095 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC284095, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284095 BINDING SITE1 through LOC284095 BINDING SITE3, designated SEQ ID:7333, SEQ ID:11799 and SEQ ID:15513 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34625] Another function of GAM281 is therefore inhibition of LOC284095 (Accession XP_211324.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284095.

[34626] LOC284098 (Accession XP_209008.3) is another GAM281

target gene, herein designated TARGET GENE. LOC284098 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284098, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284098 BINDING SITE, designated SEQ ID:8582, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34627] Another function of GAM281 is therefore inhibition of LOC284098 (Accession XP_209008.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284098.

[34628] LOC284100 (Accession XP_209015.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284100 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284100, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284100 BINDING SITE, designated SEQ ID:1777, to the nucleotide sequence of GAM281 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:278.

[34629] Another function of GAM281 is therefore inhibition of LOC284100 (Accession XP_209015.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284100.

[34630] LOC284101 (Accession XP_209019.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284101 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284101, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284101 BINDING SITE, designated SEQ ID:19537, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34631] Another function of GAM281 is therefore inhibition of LOC284101 (Accession XP_209019.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284101.

[34632] LOC284102 (Accession XP_211327.3) is another GAM281 target gene, herein designated TARGET GENE. LOC284102

BINDING SITE1 through LOC284102 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC284102, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284102 BINDING SITE1 through LOC284102 BINDING SITE3, designated SEQ ID:18149, SEQ ID:3233 and SEQ ID:7745 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34633] Another function of GAM281 is therefore inhibition of LOC284102 (Accession XP_211327.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284102.

[34634] LOC284117 (Accession XP_209024.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284117 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284117, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284117 BINDING SITE, designated SEQ ID:3725, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34635] Another function of GAM281 is therefore inhibition of LOC284117 (Accession XP_209024.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284117.

[34636] LOC284128 (Accession XP_211342.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284128 BINDING SITE1 and LOC284128 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284128, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284128 BINDING SITE1 and LOC284128 BINDING SITE2, designated SEQ ID:17271 and SEQ ID:1966 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34637] Another function of GAM281 is therefore inhibition of LOC284128 (Accession XP_211342.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC284128.

[34638] LOC284135 (Accession XP_209032.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284135 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284135, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284135 BINDING SITE, designated SEQ ID:12779, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34639] Another function of GAM281 is therefore inhibition of LOC284135 (Accession XP_209032.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284135.

[34640] LOC284145 (Accession XP_211353.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284145 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284145, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC284145 BINDING SITE, designated SEQ ID:4102, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34641] Another function of GAM281 is therefore inhibition of LOC284145 (Accession XP_211353.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284145.

[34642] LOC284171 (Accession XP_209051.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284171 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284171, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284171 BINDING SITE, designated SEQ ID:11530, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34643] Another function of GAM281 is therefore inhibition of LOC284171 (Accession XP_209051.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284171.

[34644] LOC284183 (Accession XP_209059.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284183 BINDING SITE1 and LOC284183 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284183, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284183 BINDING SITE1 and LOC284183 BINDING SITE2, designated SEQ ID:1111 and SEQ ID:9456 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34645] Another function of GAM281 is therefore inhibition of LOC284183 (Accession XP_209059.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284183.

[34646] LOC284186 (Accession XP_209060.2) is another GAM281 target gene, herein designated TARGET GENE. LOC284186 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284186, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC284186 BINDING SITE, designated SEQ ID:14861, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34647] Another function of GAM281 is therefore inhibition of LOC284186 (Accession XP_209060.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284186.

[34648] LOC284245 (Accession XP_211397.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284245 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284245, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284245 BINDING SITE, designated SEQ ID:8707, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34649] Another function of GAM281 is therefore inhibition of LOC284245 (Accession XP_211397.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC284245.

[34650] LOC284267 (Accession XP_211411.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284267 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284267, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284267 BINDING SITE, designated SEQ ID:8494, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34651] Another function of GAM281 is therefore inhibition of LOC284267 (Accession XP_211411.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284267.

[34652] LOC284276 (Accession XP_211412.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284276 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284276, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC284276 BINDING SITE, designated SEQ ID:1026, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34653] Another function of GAM281 is therefore inhibition of LOC284276 (Accession XP_211412.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284276.

[34654] LOC284286 (Accession XP_211419.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284286 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284286, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284286 BINDING SITE, designated SEQ ID:19875, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34655] Another function of GAM281 is therefore inhibition of LOC284286 (Accession XP_211419.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284286.

[34656] LOC284289 (Accession XP_209105.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284289 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284289, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284289 BINDING SITE, designated SEQ ID:1885, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34657] Another function of GAM281 is therefore inhibition of LOC284289 (Accession XP_209105.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284289.

[34658] LOC284304 (Accession XP_211426.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284304 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284304, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284304 BINDING SITE, designated SEQ ID:4849, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34659] Another function of GAM281 is therefore inhibition of LOC284304 (Accession XP_211426.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284304.

[34660] LOC284305 (Accession XP_211425.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284305 BINDING SITE1 and LOC284305 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284305, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284305 BINDING SITE1 and LOC284305 BINDING SITE2, designated SEQ ID:2477 and SEQ ID:3802 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34661] Another function of GAM281 is therefore inhibition of LOC284305 (Accession XP_211425.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC284305.

[34662] LOC284317 (Accession XP_209162.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284317 BINDING SITE1 and LOC284317 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284317, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284317 BINDING SITE1 and LOC284317 BINDING SITE2, designated SEQ ID:7077 and SEQ ID:3386 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34663] Another function of GAM281 is therefore inhibition of LOC284317 (Accession XP_209162.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284317.

[34664] LOC284321 (Accession XP_211432.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284321 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284321, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284321 BINDING SITE, designated SEQ ID:11129, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34665] Another function of GAM281 is therefore inhibition of LOC284321 (Accession XP_211432.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284321.

[34666] LOC284325 (Accession XP_209143.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284325 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284325, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284325 BINDING SITE, designated SEQ ID:1731, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34667] Another function of GAM281 is therefore inhibition of LOC284325 (Accession XP_209143.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284325.

[34668] LOC284356 (Accession XP_211437.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284356 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284356, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284356 BINDING SITE, designated SEQ ID:11986, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34669] Another function of GAM281 is therefore inhibition of LOC284356 (Accession XP_211437.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284356.

[34670] LOC284362 (Accession XP_211435.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284362 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC284362, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284362 BINDING SITE, designated SEQ ID:18898, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34671] Another function of GAM281 is therefore inhibition of LOC284362 (Accession XP_211435.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284362.

[34672] LOC284375 (Accession XP_209154.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284375 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284375, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284375 BINDING SITE, designated SEQ ID:16701, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34673] Another function of GAM281 is therefore inhibition of

LOC284375 (Accession XP_209154.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284375.

[34674] LOC284376 (Accession XP_209157.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284376 BINDING SITE1 and LOC284376 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284376, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284376 BINDING SITE1 and LOC284376 BINDING SITE2, designated SEQ ID:19718 and SEQ ID:981 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34675] Another function of GAM281 is therefore inhibition of LOC284376 (Accession XP_209157.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284376.

[34676] LOC284379 (Accession XP_209163.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284379

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284379, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284379 BINDING SITE, designated SEQ ID:9312, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34677] Another function of GAM281 is therefore inhibition of LOC284379 (Accession XP_209163.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284379.

[34678] LOC284396 (Accession XP_211452.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284396 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284396, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284396 BINDING SITE, designated SEQ ID:10399, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34679] Another function of GAM281 is therefore inhibition of LOC284396 (Accession XP_211452.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284396.

[34680] LOC284405 (Accession XP_209183.2) is another GAM281 target gene, herein designated TARGET GENE. LOC284405 BINDING SITE1 and LOC284405 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284405, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284405 BINDING SITE1 and LOC284405 BINDING SITE2, designated SEQ ID:2645 and SEQ ID:19462 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34681] Another function of GAM281 is therefore inhibition of LOC284405 (Accession XP_209183.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284405.

[34682] LOC284408 (Accession XP_211443.1) is another GAM281

target gene, herein designated TARGET GENE. LOC284408 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284408, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284408 BINDING SITE, designated SEQ ID:14364, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34683] Another function of GAM281 is therefore inhibition of LOC284408 (Accession XP_211443.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284408.

[34684] LOC284410 (Accession XP_211449.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284410 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284410, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284410 BINDING SITE, designated SEQ ID:17304, to the nucleotide sequence of GAM281 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:278.

[34685] Another function of GAM281 is therefore inhibition of LOC284410 (Accession XP_211449.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284410.

[34686] LOC284421 (Accession XP_209200.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284421 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284421, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284421 BINDING SITE, designated SEQ ID:4533, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34687] Another function of GAM281 is therefore inhibition of LOC284421 (Accession XP_209200.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284421.

[34688] LOC284426 (Accession XP_209198.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284426

BINDING SITE1 and LOC284426 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284426, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284426 BINDING SITE1 and LOC284426 BINDING SITE2, designated SEQ ID:4975 and SEQ ID:5357 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34689] Another function of GAM281 is therefore inhibition of LOC284426 (Accession XP_209198.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284426.

[34690] LOC284436 (Accession XP_290862.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284436 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284436, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284436 BINDING SITE, designated SEQ ID:16193, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34691] Another function of GAM281 is therefore inhibition of LOC284436 (Accession XP_290862.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284436.

[34692] LOC284439 (Accession XP_209204.2) is another GAM281 target gene, herein designated TARGET GENE. LOC284439 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284439, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284439 BINDING SITE, designated SEQ ID:3825, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34693] Another function of GAM281 is therefore inhibition of LOC284439 (Accession XP_209204.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284439.

[34694] LOC284440 (Accession XP_209210.1) is another GAM281

target gene, herein designated TARGET GENE. LOC284440 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284440, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284440 BINDING SITE, designated SEQ ID:8752, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34695] Another function of GAM281 is therefore inhibition of LOC284440 (Accession XP_209210.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284440.

[34696] LOC284454 (Accession XP_209216.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284454 BINDING SITE1 through LOC284454 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC284454, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284454 BINDING SITE1 through LOC284454 BINDING SITE3, des-

ignated SEQ ID:16031, SEQ ID:17976 and SEQ ID:3999 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34697] Another function of GAM281 is therefore inhibition of LOC284454 (Accession XP_209216.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284454.

[34698] LOC284456 (Accession XP_211470.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284456 BINDING SITE1 and LOC284456 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284456, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284456 BINDING SITE1 and LOC284456 BINDING SITE2, designated SEQ ID:10621 and SEQ ID:18777 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34699] Another function of GAM281 is therefore inhibition of LOC284456 (Accession XP_211470.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC284456.

[34700] LOC284459 (Accession XP_290826.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284459 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284459, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284459 BINDING SITE, designated SEQ ID:10211, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34701] Another function of GAM281 is therefore inhibition of LOC284459 (Accession XP_290826.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284459.

[34702] LOC284471 (Accession XP_209225.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284471 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284471, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC284471 BINDING SITE, designated SEQ ID:19286, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34703] Another function of GAM281 is therefore inhibition of LOC284471 (Accession XP_209225.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284471.

[34704] LOC284495 (Accession XP_302752.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284495 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284495, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284495 BINDING SITE, designated SEQ ID:12538, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34705] Another function of GAM281 is therefore inhibition of LOC284495 (Accession XP_302752.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC284495.

[34706] LOC284512 (Accession XP_211500.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284512 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284512, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284512 BINDING SITE, designated SEQ ID:14119, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34707] Another function of GAM281 is therefore inhibition of LOC284512 (Accession XP_211500.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284512.

[34708] LOC284513 (Accession XP_211502.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284513 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284513, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC284513 BINDING SITE, designated SEQ ID:18865, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34709] Another function of GAM281 is therefore inhibition of LOC284513 (Accession XP_211502.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284513.

[34710] LOC284514 (Accession XP_209244.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284514 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284514, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284514 BINDING SITE, designated SEQ ID:4125, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34711] Another function of GAM281 is therefore inhibition of LOC284514 (Accession XP_209244.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284514.

[34712] LOC284549 (Accession XP_211514.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284549 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284549, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284549 BINDING SITE, designated SEQ ID:19112, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34713] Another function of GAM281 is therefore inhibition of LOC284549 (Accession XP_211514.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284549.

[34714] LOC284551 (Accession XP_211515.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284551 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284551, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284551 BINDING SITE, designated SEQ ID:9493, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34715] Another function of GAM281 is therefore inhibition of LOC284551 (Accession XP_211515.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284551.

[34716] LOC284568 (Accession XP_209263.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284568 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284568, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284568 BINDING SITE, designated SEQ ID:3996, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34717] Another function of GAM281 is therefore inhibition of LOC284568 (Accession XP_209263.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284568.

[34718] LOC284577 (Accession XP_211522.1) is another GAM281

target gene, herein designated TARGET GENE. LOC284577 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284577, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284577 BINDING SITE, designated SEQ ID:19533, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34719] Another function of GAM281 is therefore inhibition of LOC284577 (Accession XP_211522.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284577.

[34720] LOC284587 (Accession XP_209278.3) is another GAM281 target gene, herein designated TARGET GENE. LOC284587 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284587, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284587 BINDING SITE, designated SEQ ID:12803, to the nucleotide sequence of GAM281 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:278.

[34721] Another function of GAM281 is therefore inhibition of LOC284587 (Accession XP_209278.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284587.

[34722] LOC284606 (Accession XP_211543.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284606 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284606, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284606 BINDING SITE, designated SEQ ID:2771, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34723] Another function of GAM281 is therefore inhibition of LOC284606 (Accession XP_211543.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284606.

[34724] LOC284611 (Accession XP_211552.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284611

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284611, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284611 BINDING SITE, designated SEQ ID:12497, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34725] Another function of GAM281 is therefore inhibition of LOC284611 (Accession XP_211552.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284611.

[34726] LOC284628 (Accession XP_211561.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284628 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284628, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284628 BINDING SITE, designated SEQ ID:18882, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34727] Another function of GAM281 is therefore inhibition of LOC284628 (Accession XP_211561.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284628.

[34728] LOC284630 (Accession XP_211562.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284630 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284630, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284630 BINDING SITE, designated SEQ ID:8272, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34729] Another function of GAM281 is therefore inhibition of LOC284630 (Accession XP_211562.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284630.

[34730] LOC284663 (Accession XP_209310.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284663 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC284663, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284663 BINDING SITE, designated SEQ ID:5249, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34731] Another function of GAM281 is therefore inhibition of LOC284663 (Accession XP_209310.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284663.

[34732] LOC284675 (Accession XP_209319.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284675 BINDING SITE1 through LOC284675 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC284675, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284675 BINDING SITE1 through LOC284675 BINDING SITE3, designated SEQ ID:5250, SEQ ID:2389 and SEQ ID:501 respectively, to the nucleotide sequence of GAM281 RNA,

herein designated GAM RNA, also designated SEQ ID:278.

[34733] Another function of GAM281 is therefore inhibition of LOC284675 (Accession XP_209319.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284675.

[34734] LOC284701 (Accession XP_294994.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284701 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284701, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284701 BINDING SITE, designated SEQ ID:12803, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34735] Another function of GAM281 is therefore inhibition of LOC284701 (Accession XP_294994.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284701.

[34736] LOC284708 (Accession XP_209332.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284708

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284708, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284708 BINDING SITE, designated SEQ ID:5153, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34737] Another function of GAM281 is therefore inhibition of LOC284708 (Accession XP_209332.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284708.

[34738] LOC284723 (Accession XP_211602.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284723 BINDING SITE1 and LOC284723 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284723, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284723 BINDING SITE1 and LOC284723 BINDING SITE2, designated SEQ ID:6498 and SEQ ID:3182 respectively, to the nucleotide sequence

of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34739] Another function of GAM281 is therefore inhibition of LOC284723 (Accession XP_211602.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284723.

[34740] LOC284754 (Accession XP_211627.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284754 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284754, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284754 BINDING SITE, designated SEQ ID:10930, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34741] Another function of GAM281 is therefore inhibition of LOC284754 (Accession XP_211627.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284754.

[34742] LOC284805 (Accession XP_209371.1) is another GAM281

target gene, herein designated TARGET GENE. LOC284805 BINDING SITE1 through LOC284805 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC284805, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284805 BINDING SITE1 through LOC284805 BINDING SITE3, designated SEQ ID:1544, SEQ ID:8046 and SEQ ID:853 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34743] Another function of GAM281 is therefore inhibition of LOC284805 (Accession XP_209371.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284805.

[34744] LOC284839 (Accession XP_211661.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284839 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284839, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC284839 BINDING SITE, designated SEQ ID:19401, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34745] Another function of GAM281 is therefore inhibition of LOC284839 (Accession XP_211661.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284839.

[34746] LOC284853 (Accession XP_209383.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284853 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284853, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284853 BINDING SITE, designated SEQ ID:3582, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34747] Another function of GAM281 is therefore inhibition of LOC284853 (Accession XP_209383.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284853.

[34748] LOC284856 (Accession XP_211668.2) is another GAM281 target gene, herein designated TARGET GENE. LOC284856 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC284856, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284856 BINDING SITE, designated SEQ ID:12736, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34749] Another function of GAM281 is therefore inhibition of LOC284856 (Accession XP_211668.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284856.

[34750] LOC284856 (Accession XP_302835.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284856 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC284856, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of LOC284856 BINDING SITE, designated SEQ ID:12736, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34751] Another function of GAM281 is therefore inhibition of LOC284856 (Accession XP_302835.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284856.

[34752] LOC284865 (Accession XP_211672.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284865 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284865, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284865 BINDING SITE, designated SEQ ID:1645, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34753] Another function of GAM281 is therefore inhibition of LOC284865 (Accession XP_211672.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC284865.

[34754] LOC284874 (Accession XP_209394.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284874 BINDING SITE1 and LOC284874 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284874, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284874 BINDING SITE1 and LOC284874 BINDING SITE2, designated SEQ ID:16244 and SEQ ID:3846 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34755] Another function of GAM281 is therefore inhibition of LOC284874 (Accession XP_209394.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284874.

[34756] LOC284934 (Accession XP_211696.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284934 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284934, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284934 BINDING SITE, designated SEQ ID:14894, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34757] Another function of GAM281 is therefore inhibition of LOC284934 (Accession XP_211696.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284934.

[34758] LOC284950 (Accession XP_211703.1) is another GAM281 target gene, herein designated TARGET GENE. LOC284950 BINDING SITE1 and LOC284950 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC284950, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284950 BINDING SITE1 and LOC284950 BINDING SITE2, designated SEQ ID:4025 and SEQ ID:17553 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34759] Another function of GAM281 is therefore inhibition of

LOC284950 (Accession XP_211703.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284950.

[34760] LOC285002 (Accession XP_211731.2) is another GAM281 target gene, herein designated TARGET GENE. LOC285002 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285002, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285002 BINDING SITE, designated SEQ ID:3500, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34761] Another function of GAM281 is therefore inhibition of LOC285002 (Accession XP_211731.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285002.

[34762] LOC285026 (Accession XP_209440.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285026 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285026, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285026 BINDING SITE, designated SEQ ID:17523, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34763] Another function of GAM281 is therefore inhibition of LOC285026 (Accession XP_209440.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285026.

[34764] LOC285036 (Accession XP_210798.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285036 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285036, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285036 BINDING SITE, designated SEQ ID:13688, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34765] Another function of GAM281 is therefore inhibition of LOC285036 (Accession XP_210798.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285036.

[34766] LOC285052 (Accession XP_211751.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285052 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285052, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285052 BINDING SITE, designated SEQ ID:2174, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34767] Another function of GAM281 is therefore inhibition of LOC285052 (Accession XP_211751.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285052.

[34768] LOC285058 (Accession XP_211753.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285058 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285058, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285058 BINDING SITE, designated SEQ ID:20023, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34769] Another function of GAM281 is therefore inhibition of LOC285058 (Accession XP_211753.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285058.

[34770] LOC285083 (Accession XP_209464.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285083 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285083, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285083 BINDING SITE, designated SEQ ID:5667, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34771] Another function of GAM281 is therefore inhibition of LOC285083 (Accession XP_209464.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285083.

[34772] LOC285088 (Accession XP_209465.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285088 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285088, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285088 BINDING SITE, designated SEQ ID:6092, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34773] Another function of GAM281 is therefore inhibition of LOC285088 (Accession XP_209465.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285088.

[34774] LOC285123 (Accession XP_211773.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285123 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285123, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC285123 BINDING SITE, designated SEQ ID:17113, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34775] Another function of GAM281 is therefore inhibition of LOC285123 (Accession XP_211773.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285123.

[34776] LOC285127 (Accession XP_211771.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285127 BINDING SITE1 and LOC285127 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285127, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285127 BINDING SITE1 and LOC285127 BINDING SITE2, designated SEQ ID:5921 and SEQ ID:11528 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34777] Another function of GAM281 is therefore inhibition of LOC285127 (Accession XP_211771.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285127.

[34778] LOC285166 (Accession XP_211791.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285166 BINDING SITE1 and LOC285166 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285166, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285166 BINDING SITE1 and LOC285166 BINDING SITE2, designated SEQ ID:4283 and SEQ ID:19378 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34779] Another function of GAM281 is therefore inhibition of LOC285166 (Accession XP_211791.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285166.

[34780] LOC285176 (Accession XP_209500.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285176 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC285176, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285176 BINDING SITE, designated SEQ ID:7860, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34781] Another function of GAM281 is therefore inhibition of LOC285176 (Accession XP_209500.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285176.

[34782] LOC285193 (Accession XP_209509.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285193 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285193, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285193 BINDING SITE, designated SEQ ID:1745, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34783] Another function of GAM281 is therefore inhibition of

LOC285193 (Accession XP_209509.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285193.

[34784] LOC285221 (Accession XP_209521.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285221 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285221, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285221 BINDING SITE, designated SEQ ID:13597, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34785] Another function of GAM281 is therefore inhibition of LOC285221 (Accession XP_209521.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285221.

[34786] LOC285231 (Accession XP_211813.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285231 BINDING SITE1 and LOC285231 BINDING SITE2 are target binding sites found in untranslated regions of mRNA en-

coded by LOC285231, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285231 BINDING SITE1 and LOC285231 BINDING SITE2, designated SEQ ID:8001 and SEQ ID:15366 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34787] Another function of GAM281 is therefore inhibition of LOC285231 (Accession XP_211813.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285231.

[34788] LOC285231 (Accession XP_211813.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285231 BINDING SITE1 and LOC285231 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285231, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285231 BINDING SITE1 and LOC285231 BINDING SITE2, designated SEQ ID:8001 and SEQ ID:5012 respectively, to the nucleotide sequence

of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34789] Another function of GAM281 is therefore inhibition of LOC285231 (Accession XP_211813.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285231.

[34790] LOC285281 (Accession XP_211829.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285281 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285281, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285281 BINDING SITE, designated SEQ ID:15575, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34791] Another function of GAM281 is therefore inhibition of LOC285281 (Accession XP_211829.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285281.

[34792] LOC285299 (Accession XP_209554.1) is another GAM281

target gene, herein designated TARGET GENE. LOC285299 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285299, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285299 BINDING SITE, designated SEQ ID:9374, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34793] Another function of GAM281 is therefore inhibition of LOC285299 (Accession XP_209554.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285299.

[34794] LOC285334 (Accession XP_211844.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285334 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285334, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285334 BINDING SITE, designated SEQ ID:1027, to the nucleotide sequence of GAM281 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:278.

[34795] Another function of GAM281 is therefore inhibition of LOC285334 (Accession XP_211844.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285334.

[34796] LOC285345 (Accession XP_211854.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285345 BINDING SITE1 and LOC285345 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285345, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285345 BINDING SITE1 and LOC285345 BINDING SITE2, designated SEQ ID:18883 and SEQ ID:556 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34797] Another function of GAM281 is therefore inhibition of LOC285345 (Accession XP_211854.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285345.

[34798] LOC285366 (Accession XP_209581.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285366 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285366, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285366 BINDING SITE, designated SEQ ID:6117, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34799] Another function of GAM281 is therefore inhibition of LOC285366 (Accession XP_209581.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285366.

[34800] LOC285369 (Accession XP_211861.3) is another GAM281 target gene, herein designated TARGET GENE. LOC285369 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285369, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285369 BINDING SITE, designated SEQ ID:10352, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34801] Another function of GAM281 is therefore inhibition of LOC285369 (Accession XP_211861.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285369.

[34802] LOC285389 (Accession XP_211873.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285389 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285389, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285389 BINDING SITE, designated SEQ ID:19692, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34803] Another function of GAM281 is therefore inhibition of LOC285389 (Accession XP_211873.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285389.

[34804] LOC285392 (Accession XP_211879.1) is another GAM281

target gene, herein designated TARGET GENE. LOC285392 BINDING SITE1 and LOC285392 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285392, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285392 BINDING SITE1 and LOC285392 BINDING SITE2, designated SEQ ID:9688 and SEQ ID:17969 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34805] Another function of GAM281 is therefore inhibition of LOC285392 (Accession XP_211879.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285392.

[34806] LOC285398 (Accession XP_209593.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285398 BINDING SITE1 and LOC285398 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285398, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of LOC285398 BINDING SITE1 and LOC285398 BINDING SITE2, designated SEQ ID:13286 and SEQ ID:4655 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34807] Another function of GAM281 is therefore inhibition of LOC285398 (Accession XP_209593.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285398.

[34808] LOC285429 (Accession XP_209607.3) is another GAM281 target gene, herein designated TARGET GENE. LOC285429 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285429, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285429 BINDING SITE, designated SEQ ID:4171, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34809] Another function of GAM281 is therefore inhibition of LOC285429 (Accession XP_209607.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285429.

[34810] LOC285488 (Accession XP_211914.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285488 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285488, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285488 BINDING SITE, designated SEQ ID:13804, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34811] Another function of GAM281 is therefore inhibition of LOC285488 (Accession XP_211914.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285488.

[34812] LOC285491 (Accession XP_211917.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285491 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285491, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC285491 BINDING SITE, designated SEQ ID:11239, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34813] Another function of GAM281 is therefore inhibition of LOC285491 (Accession XP_211917.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285491.

[34814] LOC285509 (Accession XP_211923.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285509 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285509, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285509 BINDING SITE, designated SEQ ID:3519, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34815] Another function of GAM281 is therefore inhibition of LOC285509 (Accession XP_211923.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC285509.

[34816] LOC285540 (Accession XP_209654.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285540 BINDING SITE1 and LOC285540 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285540, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285540 BINDING SITE1 and LOC285540 BINDING SITE2, designated SEQ ID:9543 and SEQ ID:6961 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34817] Another function of GAM281 is therefore inhibition of LOC285540 (Accession XP_209654.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285540.

[34818] LOC285560 (Accession XP_209660.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285560 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285560, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285560 BINDING SITE, designated SEQ ID:8718, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34819] Another function of GAM281 is therefore inhibition of LOC285560 (Accession XP_209660.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285560.

[34820] LOC285577 (Accession XP_211941.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285577 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285577, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285577 BINDING SITE, designated SEQ ID:4455, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34821] Another function of GAM281 is therefore inhibition of LOC285577 (Accession XP_211941.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285577.

[34822] LOC285589 (Accession XP_209671.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285589 BINDING SITE1 and LOC285589 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285589, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285589 BINDING SITE1 and LOC285589 BINDING SITE2, designated SEQ ID:12804 and SEQ ID:17087 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34823] Another function of GAM281 is therefore inhibition of LOC285589 (Accession XP_209671.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285589.

[34824] LOC285626 (Accession XP_211959.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285626 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285626, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285626 BINDING SITE, designated SEQ ID:13843, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34825] Another function of GAM281 is therefore inhibition of LOC285626 (Accession XP_211959.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285626.

[34826] LOC285633 (Accession XP_211965.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285633 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285633, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285633 BINDING SITE, designated SEQ ID:12452, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34827] Another function of GAM281 is therefore inhibition of LOC285633 (Accession XP_211965.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285633.

[34828] LOC285638 (Accession XP_209693.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285638 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285638, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285638 BINDING SITE, designated SEQ ID:4949, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34829] Another function of GAM281 is therefore inhibition of LOC285638 (Accession XP_209693.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285638.

[34830] LOC285679 (Accession XP_209719.2) is another GAM281 target gene, herein designated TARGET GENE. LOC285679 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285679, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285679 BINDING SITE, designated SEQ ID:19299, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34831] Another function of GAM281 is therefore inhibition of LOC285679 (Accession XP_209719.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285679.

[34832] LOC285683 (Accession XP_211980.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285683 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285683, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285683 BINDING SITE, designated SEQ ID:959, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34833] Another function of GAM281 is therefore inhibition of LOC285683 (Accession XP_211980.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285683.

[34834] LOC285689 (Accession XP_209724.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285689 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285689, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285689 BINDING SITE, designated SEQ ID:17726, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34835] Another function of GAM281 is therefore inhibition of LOC285689 (Accession XP_209724.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285689.

[34836] LOC285693 (Accession XP_211981.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285693 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285693, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC285693 BINDING SITE, designated SEQ ID:16940, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34837] Another function of GAM281 is therefore inhibition of LOC285693 (Accession XP_211981.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285693.

[34838] LOC285713 (Accession XP_211992.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285713 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285713, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285713 BINDING SITE, designated SEQ ID:3414, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34839] Another function of GAM281 is therefore inhibition of LOC285713 (Accession XP_211992.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC285713.

[34840] LOC285722 (Accession XP_211997.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285722 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285722, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285722 BINDING SITE, designated SEQ ID:18012, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34841] Another function of GAM281 is therefore inhibition of LOC285722 (Accession XP_211997.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285722.

[34842] LOC285744 (Accession XP_209743.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285744 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285744, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC285744 BINDING SITE, designated SEQ ID:11141, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34843] Another function of GAM281 is therefore inhibition of LOC285744 (Accession XP_209743.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285744.

[34844] LOC285747 (Accession XP_209742.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285747 BINDING SITE1 and LOC285747 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285747, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285747 BINDING SITE1 and LOC285747 BINDING SITE2, designated SEQ ID:11528 and SEQ ID:7537 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34845] Another function of GAM281 is therefore inhibition of LOC285747 (Accession XP_209742.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285747.

[34846] LOC285760 (Accession XP_209750.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285760 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285760, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285760 BINDING SITE, designated SEQ ID:13412, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34847] Another function of GAM281 is therefore inhibition of LOC285760 (Accession XP_209750.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285760.

[34848] LOC285766 (Accession XP_295177.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285766 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285766, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC285766 BINDING SITE, designated SEQ ID:1304, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34849] Another function of GAM281 is therefore inhibition of LOC285766 (Accession XP_295177.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285766.

[34850] LOC285777 (Accession XP_212013.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285777 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285777, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285777 BINDING SITE, designated SEQ ID:16810, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34851] Another function of GAM281 is therefore inhibition of LOC285777 (Accession XP_212013.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC285777.

[34852] LOC285812 (Accession XP_212055.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285812 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285812, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285812 BINDING SITE, designated SEQ ID:559, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34853] Another function of GAM281 is therefore inhibition of LOC285812 (Accession XP_212055.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285812.

[34854] LOC285813 (Accession XP_212036.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285813 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285813, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC285813 BINDING SITE, designated SEQ ID:12389, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34855] Another function of GAM281 is therefore inhibition of LOC285813 (Accession XP_212036.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285813.

[34856] LOC285822 (Accession XP_209777.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285822 BINDING SITE1 and LOC285822 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285822, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285822 BINDING SITE1 and LOC285822 BINDING SITE2, designated SEQ ID:1847 and SEQ ID:9753 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34857] Another function of GAM281 is therefore inhibition of LOC285822 (Accession XP_209777.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285822.

[34858] LOC285830 (Accession XP_212043.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285830 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285830, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285830 BINDING SITE, designated SEQ ID:986, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34859] Another function of GAM281 is therefore inhibition of LOC285830 (Accession XP_212043.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285830.

[34860] LOC285843 (Accession XP_212034.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285843 BINDING SITE1 through LOC285843 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC285843, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285843 BINDING SITE1 through LOC285843 BINDING SITE3, designated SEQ ID:14125, SEQ ID:4368 and SEQ ID:17964 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34861] Another function of GAM281 is therefore inhibition of LOC285843 (Accession XP_212034.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285843.

[34862] LOC285847 (Accession XP_212045.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285847 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285847, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285847 BINDING SITE, designated SEQ ID:18945, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34863] Another function of GAM281 is therefore inhibition of LOC285847 (Accession XP_212045.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285847.

[34864] LOC285872 (Accession XP_212061.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285872 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285872, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285872 BINDING SITE, designated SEQ ID:10885, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34865] Another function of GAM281 is therefore inhibition of LOC285872 (Accession XP_212061.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285872.

[34866] LOC285896 (Accession XP_209806.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285896 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285896, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285896 BINDING SITE, designated SEQ ID:15236, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34867] Another function of GAM281 is therefore inhibition of LOC285896 (Accession XP_209806.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285896.

[34868] LOC285914 (Accession XP_209810.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285914 BINDING SITE1 and LOC285914 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285914, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285914 BINDING SITE1 and LOC285914 BINDING SITE2, designated SEQ ID:14560 and SEQ ID:6188 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34869] Another function of GAM281 is therefore inhibition of

LOC285914 (Accession XP_209810.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285914.

[34870] LOC285922 (Accession XP_209822.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285922 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285922, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285922 BINDING SITE, designated SEQ ID:12799, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34871] Another function of GAM281 is therefore inhibition of LOC285922 (Accession XP_209822.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285922.

[34872] LOC285923 (Accession XP_212104.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285923 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285923, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285923 BINDING SITE, designated SEQ ID:19536, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34873] Another function of GAM281 is therefore inhibition of LOC285923 (Accession XP_212104.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285923.

[34874] LOC285930 (Accession XP_209818.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285930 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285930, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285930 BINDING SITE, designated SEQ ID:1867, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34875] Another function of GAM281 is therefore inhibition of LOC285930 (Accession XP_209818.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285930.

[34876] LOC285945 (Accession XP_212092.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285945 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285945, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285945 BINDING SITE, designated SEQ ID:12075, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34877] Another function of GAM281 is therefore inhibition of LOC285945 (Accession XP_212092.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285945.

[34878] LOC285946 (Accession XP_212103.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285946 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285946, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285946 BINDING SITE, designated SEQ ID:11558, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34879] Another function of GAM281 is therefore inhibition of LOC285946 (Accession XP_212103.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285946.

[34880] LOC285952 (Accession XP_209821.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285952 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285952, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285952 BINDING SITE, designated SEQ ID:15323, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34881] Another function of GAM281 is therefore inhibition of LOC285952 (Accession XP_209821.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285952.

[34882] LOC285961 (Accession XP_209833.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285961 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285961, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285961 BINDING SITE, designated SEQ ID:2604, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34883] Another function of GAM281 is therefore inhibition of LOC285961 (Accession XP_209833.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285961.

[34884] LOC285968 (Accession XP_212107.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285968 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285968, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC285968 BINDING SITE, designated SEQ ID:10956, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34885] Another function of GAM281 is therefore inhibition of LOC285968 (Accession XP_212107.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285968.

[34886] LOC285972 (Accession XP_212105.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285972 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285972, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285972 BINDING SITE, designated SEQ ID:5318, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34887] Another function of GAM281 is therefore inhibition of LOC285972 (Accession XP_212105.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC285972.

[34888] LOC285979 (Accession XP_212117.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285979 BINDING SITE1 and LOC285979 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC285979, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285979 BINDING SITE1 and LOC285979 BINDING SITE2, designated SEQ ID:1397 and SEQ ID:6388 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34889] Another function of GAM281 is therefore inhibition of LOC285979 (Accession XP_212117.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285979.

[34890] LOC285989 (Accession XP_212111.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285989 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285989, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285989 BINDING SITE, designated SEQ ID:11742, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34891] Another function of GAM281 is therefore inhibition of LOC285989 (Accession XP_212111.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285989.

[34892] LOC285999 (Accession XP_212120.1) is another GAM281 target gene, herein designated TARGET GENE. LOC285999 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285999, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285999 BINDING SITE, designated SEQ ID:17306, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34893] Another function of GAM281 is therefore inhibition of LOC285999 (Accession XP_212120.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285999.

[34894] LOC286029 (Accession XP_209866.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286029 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286029, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286029 BINDING SITE, designated SEQ ID:15231, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34895] Another function of GAM281 is therefore inhibition of LOC286029 (Accession XP_209866.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286029.

[34896] LOC286030 (Accession XP_209868.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286030 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286030, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC286030 BINDING SITE, designated SEQ ID:2244, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34897] Another function of GAM281 is therefore inhibition of LOC286030 (Accession XP_209868.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286030.

[34898] LOC286032 (Accession XP_209867.2) is another GAM281 target gene, herein designated TARGET GENE. LOC286032 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286032, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286032 BINDING SITE, designated SEQ ID:7792, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34899] Another function of GAM281 is therefore inhibition of LOC286032 (Accession XP_209867.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC286032.

[34900] LOC286039 (Accession XP_209873.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286039 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286039, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286039 BINDING SITE, designated SEQ ID:11035, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34901] Another function of GAM281 is therefore inhibition of LOC286039 (Accession XP_209873.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286039.

[34902] LOC286052 (Accession XP_212152.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286052 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286052, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC286052 BINDING SITE, designated SEQ ID:9367, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34903] Another function of GAM281 is therefore inhibition of LOC286052 (Accession XP_212152.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286052.

[34904] LOC286058 (Accession XP_212158.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286058 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286058, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286058 BINDING SITE, designated SEQ ID:9186, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34905] Another function of GAM281 is therefore inhibition of LOC286058 (Accession XP_212158.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286058.

[34906] LOC286075 (Accession NP_776192.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286075 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286075, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286075 BINDING SITE, designated SEQ ID:17965, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34907] Another function of GAM281 is therefore inhibition of LOC286075 (Accession NP_776192.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286075.

[34908] LOC286078 (Accession XP_212163.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286078 BINDING SITE1 through LOC286078 BINDING SITE5 are target binding sites found in untranslated regions of mRNA encoded by LOC286078, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286078

BINDING SITE1 through LOC286078 BINDING SITE5, designated SEQ ID:16716, SEQ ID:15083, SEQ ID:3810, SEQ ID:15589 and SEQ ID:13100 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34909] Another function of GAM281 is therefore inhibition of LOC286078 (Accession XP_212163.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286078.

[34910] LOC286090 (Accession XP_212166.3) is another GAM281 target gene, herein designated TARGET GENE. LOC286090 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286090, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286090 BINDING SITE, designated SEQ ID:16409, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34911] Another function of GAM281 is therefore inhibition of LOC286090 (Accession XP_212166.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC286090.

[34912] LOC286103 (Accession XP_209897.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286103 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC286103, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286103 BINDING SITE, designated SEQ ID:11672, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34913] Another function of GAM281 is therefore inhibition of LOC286103 (Accession XP_209897.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286103.

[34914] LOC286103 (Accession NP_848630.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286103 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC286103, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286103 BINDING SITE, designated SEQ ID:11672, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34915] Another function of GAM281 is therefore inhibition of LOC286103 (Accession NP_848630.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286103.

[34916] LOC286126 (Accession XP_212185.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286126 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286126, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286126 BINDING SITE, designated SEQ ID:7847, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34917] Another function of GAM281 is therefore inhibition of LOC286126 (Accession XP_212185.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286126.

[34918] LOC286132 (Accession XP_212194.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286132 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286132, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286132 BINDING SITE, designated SEQ ID:7113, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34919] Another function of GAM281 is therefore inhibition of LOC286132 (Accession XP_212194.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286132.

[34920] LOC286166 (Accession XP_209925.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286166 BINDING SITE1 and LOC286166 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC286166, corresponding to target binding

sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286166 BINDING SITE1 and LOC286166 BINDING SITE2, designated SEQ ID:3927 and SEQ ID:12946 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34921] Another function of GAM281 is therefore inhibition of LOC286166 (Accession XP_209925.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286166.

[34922] LOC286170 (Accession XP_212211.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286170 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286170, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286170 BINDING SITE, designated SEQ ID:8426, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34923] Another function of GAM281 is therefore inhibition of

LOC286170 (Accession XP_212211.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286170.

[34924] LOC286184 (Accession XP_212216.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286184 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286184, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286184 BINDING SITE, designated SEQ ID:12053, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34925] Another function of GAM281 is therefore inhibition of LOC286184 (Accession XP_212216.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286184.

[34926] LOC286186 (Accession XP_212219.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286186 BINDING SITE1 and LOC286186 BINDING SITE2 are target binding sites found in untranslated regions of mRNA en-

coded by LOC286186, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286186 BINDING SITE1 and LOC286186 BINDING SITE2, designated SEQ ID:3430 and SEQ ID:18020 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34927] Another function of GAM281 is therefore inhibition of LOC286186 (Accession XP_212219.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286186.

[34928] LOC286206 (Accession XP_209953.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286206 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286206, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286206 BINDING SITE, designated SEQ ID:2600, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34929] Another function of GAM281 is therefore inhibition of LOC286206 (Accession XP_209953.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286206.

[34930] LOC286207 (Accession XP_209941.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286207 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286207, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286207 BINDING SITE, designated SEQ ID:19893, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34931] Another function of GAM281 is therefore inhibition of LOC286207 (Accession XP_209941.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286207.

[34932] LOC286208 (Accession XP_212230.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286208 BINDING SITE1 through LOC286208 BINDING SITE3 are

target binding sites found in untranslated regions of mRNA encoded by LOC286208, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286208 BINDING SITE1 through LOC286208 BINDING SITE3, designated SEQ ID:9724, SEQ ID:4372 and SEQ ID:2849 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34933] Another function of GAM281 is therefore inhibition of LOC286208 (Accession XP_212230.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286208.

[34934] LOC286215 (Accession XP_212228.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286215 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286215, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286215 BINDING SITE, designated SEQ ID:19240, to the nucleotide sequence of GAM281 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:278.

[34935] Another function of GAM281 is therefore inhibition of LOC286215 (Accession XP_212228.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286215.

[34936] LOC286218 (Accession XP_212235.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286218 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286218, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286218 BINDING SITE, designated SEQ ID:6316, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34937] Another function of GAM281 is therefore inhibition of LOC286218 (Accession XP_212235.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286218.

[34938] LOC286221 (Accession XP_212233.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286221

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286221, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286221 BINDING SITE, designated SEQ ID:7774, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34939] Another function of GAM281 is therefore inhibition of LOC286221 (Accession XP_212233.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286221.

[34940] LOC286245 (Accession XP_212244.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286245 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286245, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286245 BINDING SITE, designated SEQ ID:6868, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34941] Another function of GAM281 is therefore inhibition of LOC286245 (Accession XP_212244.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286245.

[34942] LOC286258 (Accession XP_209972.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286258 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286258, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286258 BINDING SITE, designated SEQ ID:11262, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34943] Another function of GAM281 is therefore inhibition of LOC286258 (Accession XP_209972.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286258.

[34944] LOC286337 (Accession XP_212274.3) is another GAM281 target gene, herein designated TARGET GENE. LOC286337 BINDING SITE1 and LOC286337 BINDING SITE2 are target

binding sites found in untranslated regions of mRNA encoded by LOC286337, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286337 BINDING SITE1 and LOC286337 BINDING SITE2, designated SEQ ID:14911 and SEQ ID:7808 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34945] Another function of GAM281 is therefore inhibition of LOC286337 (Accession XP_212274.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286337.

[34946] LOC286341 (Accession XP_212278.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286341 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286341, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286341 BINDING SITE, designated SEQ ID:15975, to the nucleotide sequence of GAM281 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:278.

[34947] Another function of GAM281 is therefore inhibition of LOC286341 (Accession XP_212278.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286341.

[34948] LOC286354 (Accession XP_212286.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286354 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286354, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286354 BINDING SITE, designated SEQ ID:15730, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34949] Another function of GAM281 is therefore inhibition of LOC286354 (Accession XP_212286.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286354.

[34950] LOC286356 (Accession XP_212290.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286356

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286356, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286356 BINDING SITE, designated SEQ ID:7385, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34951] Another function of GAM281 is therefore inhibition of LOC286356 (Accession XP_212290.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286356.

[34952] LOC286357 (Accession XP_212285.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286357 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286357, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286357 BINDING SITE, designated SEQ ID:14974, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34953] Another function of GAM281 is therefore inhibition of LOC286357 (Accession XP_212285.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286357.

[34954] LOC286371 (Accession XP_212291.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286371 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286371, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286371 BINDING SITE, designated SEQ ID:3785, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34955] Another function of GAM281 is therefore inhibition of LOC286371 (Accession XP_212291.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286371.

[34956] LOC286395 (Accession XP_212308.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286395 BINDING SITE1 through LOC286395 BINDING SITE4 are

target binding sites found in untranslated regions of mRNA encoded by LOC286395, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286395 BINDING SITE1 through LOC286395 BINDING SITE4, designated SEQ ID:2180, SEQ ID:2722, SEQ ID:5359 and SEQ ID:16177 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34957] Another function of GAM281 is therefore inhibition of LOC286395 (Accession XP_212308.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286395.

[34958] LOC286401 (Accession XP_212310.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286401 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286401, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286401 BINDING SITE, designated SEQ ID:1038, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34959] Another function of GAM281 is therefore inhibition of LOC286401 (Accession XP_212310.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286401.

[34960] LOC286441 (Accession XP_212319.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286441 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286441, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286441 BINDING SITE, designated SEQ ID:2754, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34961] Another function of GAM281 is therefore inhibition of LOC286441 (Accession XP_212319.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286441.

[34962] LOC286467 (Accession XP_210063.1) is another GAM281

target gene, herein designated TARGET GENE. LOC286467 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286467, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286467 BINDING SITE, designated SEQ ID:9580, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34963] Another function of GAM281 is therefore inhibition of LOC286467 (Accession XP_210063.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286467.

[34964] LOC286553 (Accession XP_212340.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286553 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286553, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286553 BINDING SITE, designated SEQ ID:3183, to the nucleotide sequence of GAM281 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:278.

[34965] Another function of GAM281 is therefore inhibition of LOC286553 (Accession XP_212340.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286553.

[34966] LOC286558 (Accession XP_210106.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286558 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286558, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286558 BINDING SITE, designated SEQ ID:9264, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34967] Another function of GAM281 is therefore inhibition of LOC286558 (Accession XP_210106.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286558.

[34968] LOC286564 (Accession XP_210108.1) is another GAM281 target gene, herein designated TARGET GENE. LOC286564

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286564, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286564 BINDING SITE, designated SEQ ID:9264, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34969] Another function of GAM281 is therefore inhibition of LOC286564 (Accession XP_210108.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286564.

[34970] LOC338562 (Accession XP_294654.1) is another GAM281 target gene, herein designated TARGET GENE. LOC338562 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338562, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338562 BINDING SITE, designated SEQ ID:13760, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34971] Another function of GAM281 is therefore inhibition of LOC338562 (Accession XP_294654.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338562.

[34972] LOC338565 (Accession XP_294653.1) is another GAM281 target gene, herein designated TARGET GENE. LOC338565 BINDING SITE1 and LOC338565 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC338565, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338565 BINDING SITE1 and LOC338565 BINDING SITE2, designated SEQ ID:12867 and SEQ ID:7596 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34973] Another function of GAM281 is therefore inhibition of LOC338565 (Accession XP_294653.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338565.

[34974] LOC338579 (Accession XP_290472.1) is another GAM281

target gene, herein designated TARGET GENE. LOC338579 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338579, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338579 BINDING SITE, designated SEQ ID:4528, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34975] Another function of GAM281 is therefore inhibition of LOC338579 (Accession XP_290472.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338579.

[34976] LOC338585 (Accession XP_294658.1) is another GAM281 target gene, herein designated TARGET GENE. LOC338585 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC338585, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338585 BINDING SITE, designated SEQ ID:7523, to the nucleotide sequence of GAM281 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:278.

[34977] Another function of GAM281 is therefore inhibition of LOC338585 (Accession XP_294658.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338585.

[34978] LOC338609 (Accession XP_294664.1) is another GAM281 target gene, herein designated TARGET GENE. LOC338609 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338609, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338609 BINDING SITE, designated SEQ ID:18810, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34979] Another function of GAM281 is therefore inhibition of LOC338609 (Accession XP_294664.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338609.

[34980] LOC338645 (Accession XP_290494.1) is another GAM281 target gene, herein designated TARGET GENE. LOC338645

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338645, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338645 BINDING SITE, designated SEQ ID:6626, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34981] Another function of GAM281 is therefore inhibition of LOC338645 (Accession XP_290494.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338645.

[34982] LOC338709 (Accession XP_211595.2) is another GAM281 target gene, herein designated TARGET GENE. LOC338709 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC338709, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338709 BINDING SITE, designated SEQ ID:12803, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34983] Another function of GAM281 is therefore inhibition of LOC338709 (Accession XP_211595.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338709.

[34984] LOC338739 (Accession XP_294690.1) is another GAM281 target gene, herein designated TARGET GENE. LOC338739 BINDING SITE1 and LOC338739 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC338739, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338739 BINDING SITE1 and LOC338739 BINDING SITE2, designated SEQ ID:15044 and SEQ ID:14732 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34985] Another function of GAM281 is therefore inhibition of LOC338739 (Accession XP_294690.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338739.

[34986] LOC338773 (Accession XP_290570.1) is another GAM281

target gene, herein designated TARGET GENE. LOC338773 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338773, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338773 BINDING SITE, designated SEQ ID:16493, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34987] Another function of GAM281 is therefore inhibition of LOC338773 (Accession XP_290570.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338773.

[34988] LOC338819 (Accession XP_290216.1) is another GAM281 target gene, herein designated TARGET GENE. LOC338819 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338819, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338819 BINDING SITE, designated SEQ ID:11507, to the nucleotide sequence of GAM281 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:278.

[34989] Another function of GAM281 is therefore inhibition of LOC338819 (Accession XP_290216.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338819.

[34990] LOC338899 (Accession XP_294740.1) is another GAM281 target gene, herein designated TARGET GENE. LOC338899 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC338899, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338899 BINDING SITE, designated SEQ ID:12341, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34991] Another function of GAM281 is therefore inhibition of LOC338899 (Accession XP_294740.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338899.

[34992] LOC338923 (Accession XP_294742.1) is another GAM281 target gene, herein designated TARGET GENE. LOC338923

BINDING SITE1 and LOC338923 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC338923, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338923 BINDING SITE1 and LOC338923 BINDING SITE2, designated SEQ ID:4298 and SEQ ID:8559 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34993] Another function of GAM281 is therefore inhibition of LOC338923 (Accession XP_294742.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338923.

[34994] LOC338963 (Accession XP_294757.1) is another GAM281 target gene, herein designated TARGET GENE. LOC338963 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338963, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338963 BINDING SITE, designated SEQ ID:3348, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34995] Another function of GAM281 is therefore inhibition of LOC338963 (Accession XP_294757.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338963.

[34996] LOC338991 (Accession XP_290663.1) is another GAM281 target gene, herein designated TARGET GENE. LOC338991 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338991, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338991 BINDING SITE, designated SEQ ID:12479, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34997] Another function of GAM281 is therefore inhibition of LOC338991 (Accession XP_290663.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338991.

[34998] LOC338999 (Accession XP_290659.1) is another GAM281

target gene, herein designated TARGET GENE. LOC338999 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338999, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338999 BINDING SITE, designated SEQ ID:12479, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[34999] Another function of GAM281 is therefore inhibition of LOC338999 (Accession XP_290659.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338999.

[35000] LOC339077 (Accession XP_294802.2) is another GAM281 target gene, herein designated TARGET GENE. LOC339077 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339077, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339077 BINDING SITE, designated SEQ ID:17484, to the nucleotide sequence of GAM281 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:278.

[35001] Another function of GAM281 is therefore inhibition of LOC339077 (Accession XP_294802.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339077.

[35002] LOC339078 (Accession XP_290692.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339078 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339078, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339078 BINDING SITE, designated SEQ ID:9543, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35003] Another function of GAM281 is therefore inhibition of LOC339078 (Accession XP_290692.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339078.

[35004] LOC339108 (Accession XP_290711.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339108

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339108, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339108 BINDING SITE, designated SEQ ID:14266, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35005] Another function of GAM281 is therefore inhibition of LOC339108 (Accession XP_290711.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339108.

[35006] LOC339146 (Accession XP_294825.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339146 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339146, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339146 BINDING SITE, designated SEQ ID:15614, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35007] Another function of GAM281 is therefore inhibition of LOC339146 (Accession XP_294825.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339146.

[35008] LOC339153 (Accession XP_294827.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339153 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339153, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339153 BINDING SITE, designated SEQ ID:13344, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35009] Another function of GAM281 is therefore inhibition of LOC339153 (Accession XP_294827.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339153.

[35010] LOC339154 (Accession XP_294832.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339154 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC339154, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339154 BINDING SITE, designated SEQ ID:4196, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35011] Another function of GAM281 is therefore inhibition of LOC339154 (Accession XP_294832.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339154.

[35012] LOC339178 (Accession XP_290742.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339178 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339178, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339178 BINDING SITE, designated SEQ ID:16261, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35013] Another function of GAM281 is therefore inhibition of

LOC339178 (Accession XP_290742.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339178.

[35014] LOC339201 (Accession XP_290756.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339201 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339201, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339201 BINDING SITE, designated SEQ ID:4056, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35015] Another function of GAM281 is therefore inhibition of LOC339201 (Accession XP_290756.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339201.

[35016] LOC339216 (Accession XP_290762.2) is another GAM281 target gene, herein designated TARGET GENE. LOC339216 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339216, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339216 BINDING SITE, designated SEQ ID:19537, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35017] Another function of GAM281 is therefore inhibition of LOC339216 (Accession XP_290762.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339216.

[35018] LOC339282 (Accession XP_294900.2) is another GAM281 target gene, herein designated TARGET GENE. LOC339282 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339282, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339282 BINDING SITE, designated SEQ ID:19537, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35019] Another function of GAM281 is therefore inhibition of LOC339282 (Accession XP_294900.2) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339282.

[35020] LOC339283 (Accession XP_294899.2) is another GAM281 target gene, herein designated TARGET GENE. LOC339283 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339283, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339283 BINDING SITE, designated SEQ ID:11314, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35021] Another function of GAM281 is therefore inhibition of LOC339283 (Accession XP_294899.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339283.

[35022] LOC339298 (Accession XP_294903.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339298 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339298, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339298 BINDING SITE, designated SEQ ID:12349, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35023] Another function of GAM281 is therefore inhibition of LOC339298 (Accession XP_294903.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339298.

[35024] LOC339321 (Accession XP_290831.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339321 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339321, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339321 BINDING SITE, designated SEQ ID:2039, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35025] Another function of GAM281 is therefore inhibition of LOC339321 (Accession XP_290831.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC339321.

[35026] LOC339324 (Accession XP_290838.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339324 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339324, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339324 BINDING SITE, designated SEQ ID:9544, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35027] Another function of GAM281 is therefore inhibition of LOC339324 (Accession XP_290838.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339324.

[35028] LOC339325 (Accession XP_290830.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339325 BINDING SITE1 and LOC339325 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339325, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING

SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339325 BINDING SITE1 and LOC339325 BINDING SITE2, designated SEQ ID:17114 and SEQ ID:16940 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35029] Another function of GAM281 is therefore inhibition of LOC339325 (Accession XP_290830.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339325.

[35030] LOC339400 (Accession XP_294926.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339400 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339400, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339400 BINDING SITE, designated SEQ ID:14072, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35031] Another function of GAM281 is therefore inhibition of LOC339400 (Accession XP_294926.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339400.

[35032] LOC339417 (Accession XP_294944.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339417 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339417, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339417 BINDING SITE, designated SEQ ID:2027, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35033] Another function of GAM281 is therefore inhibition of LOC339417 (Accession XP_294944.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339417.

[35034] LOC339448 (Accession XP_290902.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339448 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339448, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339448 BINDING SITE, designated SEQ ID:10679, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35035] Another function of GAM281 is therefore inhibition of LOC339448 (Accession XP_290902.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339448.

[35036] LOC339458 (Accession XP_290911.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339458 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339458, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339458 BINDING SITE, designated SEQ ID:5488, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35037] Another function of GAM281 is therefore inhibition of LOC339458 (Accession XP_290911.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC339458.

[35038] LOC339459 (Accession XP_290907.2) is another GAM281 target gene, herein designated TARGET GENE. LOC339459 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339459, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339459 BINDING SITE, designated SEQ ID:13513, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35039] Another function of GAM281 is therefore inhibition of LOC339459 (Accession XP_290907.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339459.

[35040] LOC339492 (Accession XP_290919.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339492 BINDING SITE1 and LOC339492 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339492, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING

SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339492 BINDING SITE1 and LOC339492 BINDING SITE2, designated SEQ ID:8590 and SEQ ID:7386 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35041] Another function of GAM281 is therefore inhibition of LOC339492 (Accession XP_290919.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339492.

[35042] LOC339577 (Accession XP_295005.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339577 BINDING SITE1 and LOC339577 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339577, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339577 BINDING SITE1 and LOC339577 BINDING SITE2, designated SEQ ID:14733 and SEQ ID:12075 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35043] Another function of GAM281 is therefore inhibition of LOC339577 (Accession XP_295005.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339577.

[35044] LOC339600 (Accession XP_295014.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339600 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339600, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339600 BINDING SITE, designated SEQ ID:15295, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35045] Another function of GAM281 is therefore inhibition of LOC339600 (Accession XP_295014.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339600.

[35046] LOC339659 (Accession XP_290981.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339659 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC339659, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339659 BINDING SITE, designated SEQ ID:17076, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35047] Another function of GAM281 is therefore inhibition of LOC339659 (Accession XP_290981.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339659.

[35048] LOC339685 (Accession XP_295032.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339685 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339685, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339685 BINDING SITE, designated SEQ ID:1982, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35049] Another function of GAM281 is therefore inhibition of

LOC339685 (Accession XP_295032.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339685.

[35050] LOC339694 (Accession XP_295035.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339694 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339694, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339694 BINDING SITE, designated SEQ ID:15954, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35051] Another function of GAM281 is therefore inhibition of LOC339694 (Accession XP_295035.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339694.

[35052] LOC339711 (Accession XP_295038.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339711 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339711, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339711 BINDING SITE, designated SEQ ID:11528, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35053] Another function of GAM281 is therefore inhibition of LOC339711 (Accession XP_295038.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339711.

[35054] LOC339720 (Accession XP_295041.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339720 BINDING SITE1 and LOC339720 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339720, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339720 BINDING SITE1 and LOC339720 BINDING SITE2, designated SEQ ID:16942 and SEQ ID:18414 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35055] Another function of GAM281 is therefore inhibition of LOC339720 (Accession XP_295041.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339720.

[35056] LOC339803 (Accession XP_295072.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339803 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339803, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339803 BINDING SITE, designated SEQ ID:13337, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35057] Another function of GAM281 is therefore inhibition of LOC339803 (Accession XP_295072.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339803.

[35058] LOC339809 (Accession XP_291020.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339809 BINDING SITE1 and LOC339809 BINDING SITE2 are target

binding sites found in untranslated regions of mRNA encoded by LOC339809, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339809 BINDING SITE1 and LOC339809 BINDING SITE2, designated SEQ ID:1744 and SEQ ID:17750 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35059] Another function of GAM281 is therefore inhibition of LOC339809 (Accession XP_291020.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339809.

[35060] LOC339833 (Accession XP_291031.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339833 BINDING SITE1 and LOC339833 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339833, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339833 BINDING SITE1 and LOC339833 BINDING SITE2, designated SEQ ID:10421

and SEQ ID:7633 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35061] Another function of GAM281 is therefore inhibition of LOC339833 (Accession XP_291031.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339833.

[35062] LOC339834 (Accession NP_835467.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339834 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by LOC339834, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339834 BINDING SITE, designated SEQ ID:14645, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35063] Another function of GAM281 is therefore inhibition of LOC339834 (Accession NP_835467.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC339834.

[35064] LOC339834 (Accession XP_291033.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339834 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by LOC339834, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339834 BINDING SITE, designated SEQ ID:14645, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35065] Another function of GAM281 is therefore inhibition of LOC339834 (Accession XP_291033.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339834.

[35066] LOC339872 (Accession XP_291050.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339872 BINDING SITE1 through LOC339872 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC339872, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339872 BINDING SITE1 through LOC339872 BINDING SITE3, designated SEQ ID:5858, SEQ ID:9299 and SEQ ID:4026 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35067] Another function of GAM281 is therefore inhibition of LOC339872 (Accession XP_291050.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339872.

[35068] LOC339894 (Accession XP_295095.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339894 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339894, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339894 BINDING SITE, designated SEQ ID:1081, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35069] Another function of GAM281 is therefore inhibition of LOC339894 (Accession XP_295095.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339894.

[35070] LOC339907 (Accession XP_291065.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339907 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339907, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339907 BINDING SITE, designated SEQ ID:3425, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35071] Another function of GAM281 is therefore inhibition of LOC339907 (Accession XP_291065.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339907.

[35072] LOC339909 (Accession XP_291069.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339909 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339909, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339909 BINDING SITE, designated SEQ ID:10709, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35073] Another function of GAM281 is therefore inhibition of LOC339909 (Accession XP_291069.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339909.

[35074] LOC339914 (Accession XP_295099.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339914 BINDING SITE1 and LOC339914 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC339914, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339914 BINDING SITE1 and LOC339914 BINDING SITE2, designated SEQ ID:714 and SEQ ID:18305 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35075] Another function of GAM281 is therefore inhibition of

LOC339914 (Accession XP_295099.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339914.

[35076] LOC339970 (Accession XP_291095.1) is another GAM281 target gene, herein designated TARGET GENE. LOC339970 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339970, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339970 BINDING SITE, designated SEQ ID:16942, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35077] Another function of GAM281 is therefore inhibition of LOC339970 (Accession XP_291095.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339970.

[35078] LOC340012 (Accession XP_291113.2) is another GAM281 target gene, herein designated TARGET GENE. LOC340012 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340012, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340012 BINDING SITE, designated SEQ ID:3454, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35079] Another function of GAM281 is therefore inhibition of LOC340012 (Accession XP_291113.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340012.

[35080] LOC340037 (Accession XP_295137.1) is another GAM281 target gene, herein designated TARGET GENE. LOC340037 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340037, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340037 BINDING SITE, designated SEQ ID:12244, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35081] Another function of GAM281 is therefore inhibition of LOC340037 (Accession XP_295137.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340037.

[35082] LOC340125 (Accession XP_291150.1) is another GAM281 target gene, herein designated TARGET GENE. LOC340125 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340125, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340125 BINDING SITE, designated SEQ ID:12803, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35083] Another function of GAM281 is therefore inhibition of LOC340125 (Accession XP_291150.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340125.

[35084] LOC340133 (Accession XP_291151.1) is another GAM281 target gene, herein designated TARGET GENE. LOC340133 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340133, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340133 BINDING SITE, designated SEQ ID:10105, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35085] Another function of GAM281 is therefore inhibition of LOC340133 (Accession XP_291151.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340133.

[35086] LOC340138 (Accession XP_291153.1) is another GAM281 target gene, herein designated TARGET GENE. LOC340138 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340138, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340138 BINDING SITE, designated SEQ ID:11753, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35087] Another function of GAM281 is therefore inhibition of LOC340138 (Accession XP_291153.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC340138.

[35088] LOC340156 (Accession XP_291158.1) is another GAM281 target gene, herein designated TARGET GENE. LOC340156 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340156, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340156 BINDING SITE, designated SEQ ID:10096, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35089] Another function of GAM281 is therefore inhibition of LOC340156 (Accession XP_291158.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340156.

[35090] LOC340227 (Accession XP_291203.1) is another GAM281 target gene, herein designated TARGET GENE. LOC340227 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340227, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC340227 BINDING SITE, designated SEQ ID:12803, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35091] Another function of GAM281 is therefore inhibition of LOC340227 (Accession XP_291203.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340227.

[35092] LOC340238 (Accession XP_295188.1) is another GAM281 target gene, herein designated TARGET GENE. LOC340238 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340238, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340238 BINDING SITE, designated SEQ ID:2179, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35093] Another function of GAM281 is therefore inhibition of LOC340238 (Accession XP_295188.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC340238.

[35094] LOC340249 (Accession XP_291211.1) is another GAM281 target gene, herein designated TARGET GENE. LOC340249 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340249, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340249 BINDING SITE, designated SEQ ID:7647, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35095] Another function of GAM281 is therefore inhibition of LOC340249 (Accession XP_291211.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340249.

[35096] LOC340259 (Accession XP_295190.1) is another GAM281 target gene, herein designated TARGET GENE. LOC340259 BINDING SITE1 and LOC340259 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC340259, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of LOC340259 BINDING SITE1 and LOC340259 BINDING SITE2, designated SEQ ID:18147 and SEQ ID:11519 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35097] Another function of GAM281 is therefore inhibition of LOC340259 (Accession XP_295190.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340259.

[35098] LOC340290 (Accession XP_291214.1) is another GAM281 target gene, herein designated TARGET GENE. LOC340290 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340290, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340290 BINDING SITE, designated SEQ ID:15740, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35099] Another function of GAM281 is therefore inhibition of LOC340290 (Accession XP_291214.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC340290.

[35100] LOC340390 (Accession XP_291269.1) is another GAM281 target gene, herein designated TARGET GENE. LOC340390 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340390, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340390 BINDING SITE, designated SEQ ID:18868, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35101] Another function of GAM281 is therefore inhibition of LOC340390 (Accession XP_291269.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340390.

[35102] LOC340408 (Accession XP_291274.1) is another GAM281 target gene, herein designated TARGET GENE. LOC340408 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340408, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC340408 BINDING SITE, designated SEQ ID:1309, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35103] Another function of GAM281 is therefore inhibition of LOC340408 (Accession XP_291274.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340408.

[35104] LOC340414 (Accession XP_295240.1) is another GAM281 target gene, herein designated TARGET GENE. LOC340414 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340414, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340414 BINDING SITE, designated SEQ ID:1744, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35105] Another function of GAM281 is therefore inhibition of LOC340414 (Accession XP_295240.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC340414.

[35106] LOC340450 (Accession XP_295252.1) is another GAM281 target gene, herein designated TARGET GENE. LOC340450 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340450, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340450 BINDING SITE, designated SEQ ID:1744, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35107] Another function of GAM281 is therefore inhibition of LOC340450 (Accession XP_295252.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340450.

[35108] LOC340815 (Accession XP_295776.1) is another GAM281 target gene, herein designated TARGET GENE. LOC340815 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340815, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC340815 BINDING SITE, designated SEQ ID:6038, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35109] Another function of GAM281 is therefore inhibition of LOC340815 (Accession XP_295776.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340815.

[35110] LOC342663 (Accession XP_297028.1) is another GAM281 target gene, herein designated TARGET GENE. LOC342663 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC342663, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC342663 BINDING SITE, designated SEQ ID:12875, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35111] Another function of GAM281 is therefore inhibition of LOC342663 (Accession XP_297028.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC342663.

[35112] LOC342926 (Accession XP_292790.2) is another GAM281 target gene, herein designated TARGET GENE. LOC342926 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC342926, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC342926 BINDING SITE, designated SEQ ID:13464, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35113] Another function of GAM281 is therefore inhibition of LOC342926 (Accession XP_292790.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC342926.

[35114] LOC345119 (Accession XP_298539.1) is another GAM281 target gene, herein designated TARGET GENE. LOC345119 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC345119, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC345119 BINDING SITE, designated SEQ ID:17910, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35115] Another function of GAM281 is therefore inhibition of LOC345119 (Accession XP_298539.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC345119.

[35116] LOC345275 (Accession NP_835236.1) is another GAM281 target gene, herein designated TARGET GENE. LOC345275 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC345275, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC345275 BINDING SITE, designated SEQ ID:523, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35117] Another function of GAM281 is therefore inhibition of LOC345275 (Accession NP_835236.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC345275.

[35118] LOC345878 (Accession XP_293993.2) is another GAM281 target gene, herein designated TARGET GENE. LOC345878 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC345878, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC345878 BINDING SITE, designated SEQ ID:12611, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35119] Another function of GAM281 is therefore inhibition of LOC345878 (Accession XP_293993.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC345878.

[35120] LOC346546 (Accession XP_294264.2) is another GAM281 target gene, herein designated TARGET GENE. LOC346546 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC346546, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC346546 BINDING SITE, designated SEQ ID:18735, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35121] Another function of GAM281 is therefore inhibition of LOC346546 (Accession XP_294264.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC346546.

[35122] LOC346653 (Accession XP_294357.2) is another GAM281 target gene, herein designated TARGET GENE. LOC346653 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC346653, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC346653 BINDING SITE, designated SEQ ID:17927, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35123] Another function of GAM281 is therefore inhibition of LOC346653 (Accession XP_294357.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC346653.

[35124] LOC347648 (Accession XP_300226.1) is another GAM281

target gene, herein designated TARGET GENE. LOC347648 BINDING SITE1 and LOC347648 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC347648, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC347648 BINDING SITE1 and LOC347648 BINDING SITE2, designated SEQ ID:19153 and SEQ ID:9837 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35125] Another function of GAM281 is therefore inhibition of LOC347648 (Accession XP_300226.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347648.

[35126] LOC347918 (Accession XP_300565.1) is another GAM281 target gene, herein designated TARGET GENE. LOC347918 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC347918, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC347918 BINDING SITE, designated SEQ ID:17689, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35127] Another function of GAM281 is therefore inhibition of LOC347918 (Accession XP_300565.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347918.

[35128] LOC348071 (Accession XP_300620.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348071 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348071, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348071 BINDING SITE, designated SEQ ID:5985, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35129] Another function of GAM281 is therefore inhibition of LOC348071 (Accession XP_300620.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348071.

[35130] LOC348075 (Accession XP_302653.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348075 BINDING SITE1 and LOC348075 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348075, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348075 BINDING SITE1 and LOC348075 BINDING SITE2, designated SEQ ID:14381 and SEQ ID:13716 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35131] Another function of GAM281 is therefore inhibition of LOC348075 (Accession XP_302653.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348075.

[35132] LOC348094 (Accession XP_300615.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348094 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348094, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC348094 BINDING SITE, designated SEQ ID:16473, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35133] Another function of GAM281 is therefore inhibition of LOC348094 (Accession XP_300615.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348094.

[35134] LOC348113 (Accession XP_300623.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348113 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348113, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348113 BINDING SITE, designated SEQ ID:12479, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35135] Another function of GAM281 is therefore inhibition of LOC348113 (Accession XP_300623.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC348113.

[35136] LOC348115 (Accession XP_300626.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348115 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348115, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348115 BINDING SITE, designated SEQ ID:13705, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35137] Another function of GAM281 is therefore inhibition of LOC348115 (Accession XP_300626.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348115.

[35138] LOC348125 (Accession XP_302665.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348125 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348125, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC348125 BINDING SITE, designated SEQ ID:4673, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35139] Another function of GAM281 is therefore inhibition of LOC348125 (Accession XP_302665.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348125.

[35140] LOC348137 (Accession XP_300635.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348137 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348137, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348137 BINDING SITE, designated SEQ ID:12479, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35141] Another function of GAM281 is therefore inhibition of LOC348137 (Accession XP_300635.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348137.

[35142] LOC348142 (Accession XP_300636.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348142 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348142, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348142 BINDING SITE, designated SEQ ID:12479, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35143] Another function of GAM281 is therefore inhibition of LOC348142 (Accession XP_300636.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348142.

[35144] LOC348212 (Accession XP_302685.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348212 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348212, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348212 BINDING SITE, designated SEQ ID:15020, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35145] Another function of GAM281 is therefore inhibition of LOC348212 (Accession XP_302685.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348212.

[35146] LOC348235 (Accession XP_300670.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348235 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348235, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348235 BINDING SITE, designated SEQ ID:15852, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35147] Another function of GAM281 is therefore inhibition of LOC348235 (Accession XP_300670.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348235.

[35148] LOC348261 (Accession XP_302704.1) is another GAM281

target gene, herein designated TARGET GENE. LOC348261 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348261, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348261 BINDING SITE, designated SEQ ID:10989, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35149] Another function of GAM281 is therefore inhibition of LOC348261 (Accession XP_302704.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348261.

[35150] LOC348262 (Accession XP_300683.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348262 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348262, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348262 BINDING SITE, designated SEQ ID:7306, to the nucleotide sequence of GAM281 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:278.

[35151] Another function of GAM281 is therefore inhibition of LOC348262 (Accession XP_300683.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348262.

[35152] LOC348314 (Accession XP_302716.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348314 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348314, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348314 BINDING SITE, designated SEQ ID:16669, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35153] Another function of GAM281 is therefore inhibition of LOC348314 (Accession XP_302716.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348314.

[35154] LOC348326 (Accession XP_300696.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348326

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348326, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348326 BINDING SITE, designated SEQ ID:19778, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35155] Another function of GAM281 is therefore inhibition of LOC348326 (Accession XP_300696.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348326.

[35156] LOC348327 (Accession XP_030209.2) is another GAM281 target gene, herein designated TARGET GENE. LOC348327 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348327, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348327 BINDING SITE, designated SEQ ID:8820, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35157] Another function of GAM281 is therefore inhibition of LOC348327 (Accession XP_030209.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348327.

[35158] LOC348369 (Accession XP_302732.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348369 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348369, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348369 BINDING SITE, designated SEQ ID:2235, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35159] Another function of GAM281 is therefore inhibition of LOC348369 (Accession XP_302732.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348369.

[35160] LOC348393 (Accession XP_302741.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348393 BINDING SITE1 and LOC348393 BINDING SITE2 are target

binding sites found in untranslated regions of mRNA encoded by LOC348393, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348393 BINDING SITE1 and LOC348393 BINDING SITE2, designated SEQ ID:11192 and SEQ ID:872 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35161] Another function of GAM281 is therefore inhibition of LOC348393 (Accession XP_302741.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348393.

[35162] LOC348396 (Accession XP_300729.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348396 BINDING SITE1 through LOC348396 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC348396, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348396 BINDING SITE1 through LOC348396 BINDING SITE4, des-

ignated SEQ ID:1569, SEQ ID:9545, SEQ ID:10270 and SEQ ID:4081 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35163] Another function of GAM281 is therefore inhibition of LOC348396 (Accession XP_300729.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348396.

[35164] LOC348402 (Accession XP_300730.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348402 BINDING SITE1 and LOC348402 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348402, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348402 BINDING SITE1 and LOC348402 BINDING SITE2, designated SEQ ID:8590 and SEQ ID:7386 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35165] Another function of GAM281 is therefore inhibition of LOC348402 (Accession XP_300730.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348402.

[35166] LOC348445 (Accession XP_300738.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348445 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348445, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348445 BINDING SITE, designated SEQ ID:19778, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35167] Another function of GAM281 is therefore inhibition of LOC348445 (Accession XP_300738.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348445.

[35168] LOC348455 (Accession XP_302760.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348455 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348455, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348455 BINDING SITE, designated SEQ ID:15049, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35169] Another function of GAM281 is therefore inhibition of LOC348455 (Accession XP_302760.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348455.

[35170] LOC348460 (Accession XP_300743.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348460 BINDING SITE1 and LOC348460 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348460, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348460 BINDING SITE1 and LOC348460 BINDING SITE2, designated SEQ ID:13465 and SEQ ID:4143 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35171] Another function of GAM281 is therefore inhibition of

LOC348460 (Accession XP_300743.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348460.

[35172] LOC348474 (Accession XP_209299.2) is another GAM281 target gene, herein designated TARGET GENE. LOC348474 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348474, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348474 BINDING SITE, designated SEQ ID:17206, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35173] Another function of GAM281 is therefore inhibition of LOC348474 (Accession XP_209299.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348474.

[35174] LOC348494 (Accession XP_302789.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348494 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348494, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348494 BINDING SITE, designated SEQ ID:6119, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35175] Another function of GAM281 is therefore inhibition of LOC348494 (Accession XP_302789.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348494.

[35176] LOC348499 (Accession XP_302799.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348499 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348499, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348499 BINDING SITE, designated SEQ ID:2771, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35177] Another function of GAM281 is therefore inhibition of LOC348499 (Accession XP_302799.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348499.

[35178] LOC348503 (Accession XP_300762.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348503 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348503, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348503 BINDING SITE, designated SEQ ID:19361, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35179] Another function of GAM281 is therefore inhibition of LOC348503 (Accession XP_300762.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348503.

[35180] LOC348508 (Accession XP_302806.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348508 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348508, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348508 BINDING SITE, designated SEQ ID:12803, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35181] Another function of GAM281 is therefore inhibition of LOC348508 (Accession XP_302806.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348508.

[35182] LOC348525 (Accession XP_300778.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348525 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348525, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348525 BINDING SITE, designated SEQ ID:5488, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35183] Another function of GAM281 is therefore inhibition of LOC348525 (Accession XP_300778.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC348525.

[35184] LOC348532 (Accession XP_302818.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348532 BINDING SITE1 and LOC348532 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348532, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348532 BINDING SITE1 and LOC348532 BINDING SITE2, designated SEQ ID:872 and SEQ ID:11192 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35185] Another function of GAM281 is therefore inhibition of LOC348532 (Accession XP_302818.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348532.

[35186] LOC348581 (Accession XP_302830.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348581 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348581, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348581 BINDING SITE, designated SEQ ID:1998, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35187] Another function of GAM281 is therefore inhibition of LOC348581 (Accession XP_302830.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348581.

[35188] LOC348699 (Accession XP_300816.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348699 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348699, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348699 BINDING SITE, designated SEQ ID:10599, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35189] Another function of GAM281 is therefore inhibition of LOC348699 (Accession XP_300816.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348699.

[35190] LOC348702 (Accession XP_300808.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348702 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348702, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348702 BINDING SITE, designated SEQ ID:7387, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35191] Another function of GAM281 is therefore inhibition of LOC348702 (Accession XP_300808.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348702.

[35192] LOC348738 (Accession XP_300826.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348738 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348738, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348738 BINDING SITE, designated SEQ ID:2286, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35193] Another function of GAM281 is therefore inhibition of LOC348738 (Accession XP_300826.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348738.

[35194] LOC348790 (Accession XP_300843.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348790 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348790, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348790 BINDING SITE, designated SEQ ID:810, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35195] Another function of GAM281 is therefore inhibition of LOC348790 (Accession XP_300843.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC348790.

[35196] LOC348797 (Accession XP_302888.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348797 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348797, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348797 BINDING SITE, designated SEQ ID:7741, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35197] Another function of GAM281 is therefore inhibition of LOC348797 (Accession XP_302888.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348797.

[35198] LOC348798 (Accession XP_300845.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348798 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348798, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC348798 BINDING SITE, designated SEQ ID:19402, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35199] Another function of GAM281 is therefore inhibition of LOC348798 (Accession XP_300845.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348798.

[35200] LOC348825 (Accession XP_300853.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348825 BINDING SITE1 and LOC348825 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348825, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348825 BINDING SITE1 and LOC348825 BINDING SITE2, designated SEQ ID:15126 and SEQ ID:11688 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35201] Another function of GAM281 is therefore inhibition of LOC348825 (Accession XP_300853.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348825.

[35202] LOC348842 (Accession XP_300861.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348842 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348842, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348842 BINDING SITE, designated SEQ ID:12803, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35203] Another function of GAM281 is therefore inhibition of LOC348842 (Accession XP_300861.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348842.

[35204] LOC348899 (Accession XP_302914.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348899 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348899, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348899 BINDING SITE, designated SEQ ID:3454, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35205] Another function of GAM281 is therefore inhibition of LOC348899 (Accession XP_302914.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348899.

[35206] LOC348928 (Accession XP_209688.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348928 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348928, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348928 BINDING SITE, designated SEQ ID:1305, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35207] Another function of GAM281 is therefore inhibition of LOC348928 (Accession XP_209688.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC348928.

[35208] LOC348995 (Accession XP_300434.1) is another GAM281 target gene, herein designated TARGET GENE. LOC348995 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348995, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348995 BINDING SITE, designated SEQ ID:1900, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35209] Another function of GAM281 is therefore inhibition of LOC348995 (Accession XP_300434.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348995.

[35210] LOC349024 (Accession XP_300250.1) is another GAM281 target gene, herein designated TARGET GENE. LOC349024 BINDING SITE1 and LOC349024 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC349024, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING

SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349024 BINDING SITE1 and LOC349024 BINDING SITE2, designated SEQ ID:1746 and SEQ ID:4617 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35211] Another function of GAM281 is therefore inhibition of LOC349024 (Accession XP_300250.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349024.

[35212] LOC349075 (Accession XP_300932.1) is another GAM281 target gene, herein designated TARGET GENE. LOC349075 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349075, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349075 BINDING SITE, designated SEQ ID:16022, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35213] Another function of GAM281 is therefore inhibition of LOC349075 (Accession XP_300932.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349075.

[35214] LOC349096 (Accession XP_300937.1) is another GAM281 target gene, herein designated TARGET GENE. LOC349096 BINDING SITE1 and LOC349096 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC349096, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349096 BINDING SITE1 and LOC349096 BINDING SITE2, designated SEQ ID:14560 and SEQ ID:6188 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35215] Another function of GAM281 is therefore inhibition of LOC349096 (Accession XP_300937.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349096.

[35216] LOC349114 (Accession XP_302960.1) is another GAM281 target gene, herein designated TARGET GENE. LOC349114 BINDING SITE is a target binding site found in the 5` un-

translated region of mRNA encoded by LOC349114, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349114 BINDING SITE, designated SEQ ID:12803, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35217] Another function of GAM281 is therefore inhibition of LOC349114 (Accession XP_302960.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349114.

[35218] LOC349136 (Accession XP_300958.1) is another GAM281 target gene, herein designated TARGET GENE. LOC349136 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC349136, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349136 BINDING SITE, designated SEQ ID:6676, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35219] Another function of GAM281 is therefore inhibition of

LOC349136 (Accession XP_300958.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349136.

[35220] LOC349170 (Accession XP_300969.1) is another GAM281 target gene, herein designated TARGET GENE. LOC349170 BINDING SITE1 through LOC349170 BINDING SITE4 are target binding sites found in untranslated regions of mRNA encoded by LOC349170, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349170 BINDING SITE1 through LOC349170 BINDING SITE4, designated SEQ ID:3349, SEQ ID:9545, SEQ ID:18074 and SEQ ID:11508 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35221] Another function of GAM281 is therefore inhibition of LOC349170 (Accession XP_300969.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349170.

[35222] LOC349251 (Accession XP_300251.1) is another GAM281

target gene, herein designated TARGET GENE. LOC349251 BINDING SITE1 and LOC349251 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC349251, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349251 BINDING SITE1 and LOC349251 BINDING SITE2, designated SEQ ID:2323 and SEQ ID:4454 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35223] Another function of GAM281 is therefore inhibition of LOC349251 (Accession XP_300251.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349251.

[35224] LOC349360 (Accession XP_088528.1) is another GAM281 target gene, herein designated TARGET GENE. LOC349360 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC349360, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC349360 BINDING SITE, designated SEQ ID:10639, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35225] Another function of GAM281 is therefore inhibition of LOC349360 (Accession XP_088528.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349360.

[35226] LOC349408 (Accession XP_303044.1) is another GAM281 target gene, herein designated TARGET GENE. LOC349408 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC349408, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349408 BINDING SITE, designated SEQ ID:13466, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35227] Another function of GAM281 is therefore inhibition of LOC349408 (Accession XP_303044.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349408.

[35228] LOC349440 (Accession XP_300513.1) is another GAM281 target gene, herein designated TARGET GENE. LOC349440 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349440, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349440 BINDING SITE, designated SEQ ID:4112, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35229] Another function of GAM281 is therefore inhibition of LOC349440 (Accession XP_300513.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349440.

[35230] LOC350106 (Accession XP_303810.1) is another GAM281 target gene, herein designated TARGET GENE. LOC350106 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC350106, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC350106 BINDING SITE, designated SEQ ID:18715, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35231] Another function of GAM281 is therefore inhibition of LOC350106 (Accession XP_303810.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC350106.

[35232] LOC350395 (Accession XP_304054.1) is another GAM281 target gene, herein designated TARGET GENE. LOC350395 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC350395, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC350395 BINDING SITE, designated SEQ ID:8276, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35233] Another function of GAM281 is therefore inhibition of LOC350395 (Accession XP_304054.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC350395.

[35234] LOC51058 (Accession NP_056995.1) is another GAM281

target gene, herein designated TARGET GENE. LOC51058 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC51058, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51058 BINDING SITE, designated SEQ ID:5678, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35235] Another function of GAM281 is therefore inhibition of LOC51058 (Accession NP_056995.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51058.

[35236] LOC51122 (Accession NP_057178.1) is another GAM281 target gene, herein designated TARGET GENE. LOC51122 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC51122, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51122 BINDING SITE, designated SEQ ID:1167, to the nucleotide sequence of GAM281 RNA, herein designated

GAM RNA, also designated SEQ ID:278.

[35237] Another function of GAM281 is therefore inhibition of LOC51122 (Accession NP_057178.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51122.

[35238] LOC51193 (Accession NP_057415.1) is another GAM281 target gene, herein designated TARGET GENE. LOC51193 BINDING SITE1 and LOC51193 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC51193, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51193 BINDING SITE1 and LOC51193 BINDING SITE2, designated SEQ ID:3111 and SEQ ID:14721 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35239] Another function of GAM281 is therefore inhibition of LOC51193 (Accession NP_057415.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51193.

[35240] LOC51257 (Accession NP_057580.2) is another GAM281 target gene, herein designated TARGET GENE. LOC51257 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC51257, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51257 BINDING SITE, designated SEQ ID:14855, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35241] Another function of GAM281 is therefore inhibition of LOC51257 (Accession NP_057580.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51257.

[35242] LOC51334 (Accession NP_057728.1) is another GAM281 target gene, herein designated TARGET GENE. LOC51334 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC51334, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51334 BINDING SITE, designated SEQ ID:8243, to the

nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35243] Another function of GAM281 is therefore inhibition of LOC51334 (Accession NP_057728.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51334.

[35244] LOC51336 (Accession NP_057730.1) is another GAM281 target gene, herein designated TARGET GENE. LOC51336 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC51336, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51336 BINDING SITE, designated SEQ ID:18703, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35245] Another function of GAM281 is therefore inhibition of LOC51336 (Accession NP_057730.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51336.

[35246] LOC55954 (Accession NP_061976.1) is another GAM281

target gene, herein designated TARGET GENE. LOC55954 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC55954, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC55954 BINDING SITE, designated SEQ ID:17853, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35247] Another function of GAM281 is therefore inhibition of LOC55954 (Accession NP_061976.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC55954.

[35248] LOC56902 (Accession NP_064528.1) is another GAM281 target gene, herein designated TARGET GENE. LOC56902 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC56902, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC56902 BINDING SITE, designated SEQ ID:5945, to the nucleotide sequence of GAM281 RNA, herein designated

GAM RNA, also designated SEQ ID:278.

[35249] Another function of GAM281 is therefore inhibition of LOC56902 (Accession NP_064528.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC56902.

[35250] LOC57107 (Accession NP_065114.2) is another GAM281 target gene, herein designated TARGET GENE. LOC57107 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC57107, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC57107 BINDING SITE, designated SEQ ID:16916, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35251] Another function of GAM281 is therefore inhibition of LOC57107 (Accession NP_065114.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC57107.

[35252] LOC57146 (Accession NP_065155.2) is another GAM281 target gene, herein designated TARGET GENE. LOC57146

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC57146, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC57146 BINDING SITE, designated SEQ ID:11036, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35253] Another function of GAM281 is therefore inhibition of LOC57146 (Accession NP_065155.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC57146.

[35254] LOC57209 (Accession XP_290488.1) is another GAM281 target gene, herein designated TARGET GENE. LOC57209 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC57209, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC57209 BINDING SITE, designated SEQ ID:2349, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35255] Another function of GAM281 is therefore inhibition of LOC57209 (Accession XP_290488.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC57209.

[35256] LOC90110 (Accession XP_029046.1) is another GAM281 target gene, herein designated TARGET GENE. LOC90110 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC90110, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90110 BINDING SITE, designated SEQ ID:10533, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35257] Another function of GAM281 is therefore inhibition of LOC90110 (Accession XP_029046.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90110.

[35258] LOC90408 (Accession XP_031517.1) is another GAM281 target gene, herein designated TARGET GENE. LOC90408 BINDING SITE is a target binding site found in the 5` un-

translated region of mRNA encoded by LOC90408, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90408 BINDING SITE, designated SEQ ID:7704, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35259] Another function of GAM281 is therefore inhibition of LOC90408 (Accession XP_031517.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90408.

[35260] LOC90485 (Accession XP_032059.1) is another GAM281 target gene, herein designated TARGET GENE. LOC90485 BINDING SITE1 and LOC90485 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC90485, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90485 BINDING SITE1 and LOC90485 BINDING SITE2, designated SEQ ID:6896 and SEQ ID:18698 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA,

also designated SEQ ID:278.

[35261] Another function of GAM281 is therefore inhibition of LOC90485 (Accession XP_032059.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90485.

[35262] LOC90999 (Accession XP_035410.1) is another GAM281 target gene, herein designated TARGET GENE. LOC90999 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC90999, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90999 BINDING SITE, designated SEQ ID:15038, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35263] Another function of GAM281 is therefore inhibition of LOC90999 (Accession XP_035410.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90999.

[35264] LOC91056 (Accession NP_612377.1) is another GAM281 target gene, herein designated TARGET GENE. LOC91056

BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by LOC91056, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91056 BINDING SITE, designated SEQ ID:14660, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35265] Another function of GAM281 is therefore inhibition of LOC91056 (Accession NP_612377.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91056.

[35266] LOC91115 (Accession XP_036218.1) is another GAM281 target gene, herein designated TARGET GENE. LOC91115 BINDING SITE1 through LOC91115 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by LOC91115, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91115 BINDING SITE1 through LOC91115 BINDING SITE3, designated SEQ

ID:19989, SEQ ID:17831 and SEQ ID:12591 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35267] Another function of GAM281 is therefore inhibition of LOC91115 (Accession XP_036218.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91115.

[35268] LOC91170 (Accession XP_036612.1) is another GAM281 target gene, herein designated TARGET GENE. LOC91170 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC91170, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91170 BINDING SITE, designated SEQ ID:16178, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35269] Another function of GAM281 is therefore inhibition of LOC91170 (Accession XP_036612.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91170.

[35270] LOC91250 (Accession XP_037135.1) is another GAM281 target gene, herein designated TARGET GENE. LOC91250 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC91250, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91250 BINDING SITE, designated SEQ ID:8577, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35271] Another function of GAM281 is therefore inhibition of LOC91250 (Accession XP_037135.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91250.

[35272] LOC91266 (Accession XP_037268.1) is another GAM281 target gene, herein designated TARGET GENE. LOC91266 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC91266, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91266 BINDING SITE, designated SEQ ID:18355, to the

nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35273] Another function of GAM281 is therefore inhibition of LOC91266 (Accession XP_037268.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91266.

[35274] LOC91373 (Accession XP_038063.5) is another GAM281 target gene, herein designated TARGET GENE. LOC91373 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC91373, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91373 BINDING SITE, designated SEQ ID:9077, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35275] Another function of GAM281 is therefore inhibition of LOC91373 (Accession XP_038063.5) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91373.

[35276] LOC91549 (Accession XP_039115.1) is another GAM281

target gene, herein designated TARGET GENE. LOC91549 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC91549, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91549 BINDING SITE, designated SEQ ID:17238, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35277] Another function of GAM281 is therefore inhibition of LOC91549 (Accession XP_039115.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91549.

[35278] LOC91661 (Accession NP_612381.1) is another GAM281 target gene, herein designated TARGET GENE. LOC91661 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC91661, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91661 BINDING SITE, designated SEQ ID:8303, to the nucleotide sequence of GAM281 RNA, herein designated

GAM RNA, also designated SEQ ID:278.

[35279] Another function of GAM281 is therefore inhibition of LOC91661 (Accession NP_612381.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91661.

[35280] LOC91663 (Accession NP_612382.1) is another GAM281 target gene, herein designated TARGET GENE. LOC91663 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC91663, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91663 BINDING SITE, designated SEQ ID:8075, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35281] Another function of GAM281 is therefore inhibition of LOC91663 (Accession NP_612382.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91663.

[35282] LOC91893 (Accession XP_041340.1) is another GAM281 target gene, herein designated TARGET GENE. LOC91893

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC91893, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91893 BINDING SITE, designated SEQ ID:14589, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35283] Another function of GAM281 is therefore inhibition of LOC91893 (Accession XP_041340.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91893.

[35284] LOC92017 (Accession XP_042234.2) is another GAM281 target gene, herein designated TARGET GENE. LOC92017 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC92017, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92017 BINDING SITE, designated SEQ ID:9327, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35285] Another function of GAM281 is therefore inhibition of LOC92017 (Accession XP_042234.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92017.

[35286] LOC92148 (Accession XP_043160.1) is another GAM281 target gene, herein designated TARGET GENE. LOC92148 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC92148, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92148 BINDING SITE, designated SEQ ID:4097, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35287] Another function of GAM281 is therefore inhibition of LOC92148 (Accession XP_043160.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92148.

[35288] LOC92360 (Accession XP_044589.1) is another GAM281 target gene, herein designated TARGET GENE. LOC92360 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC92360, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92360 BINDING SITE, designated SEQ ID:1082, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35289] Another function of GAM281 is therefore inhibition of LOC92360 (Accession XP_044589.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92360.

[35290] LOC92597 (Accession NP_775739.1) is another GAM281 target gene, herein designated TARGET GENE. LOC92597 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC92597, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92597 BINDING SITE, designated SEQ ID:19339, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35291] Another function of GAM281 is therefore inhibition of

LOC92597 (Accession NP_775739.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92597.

[35292] LOC92659 (Accession XP_046434.3) is another GAM281 target gene, herein designated TARGET GENE. LOC92659 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC92659, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92659 BINDING SITE, designated SEQ ID:10989, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35293] Another function of GAM281 is therefore inhibition of LOC92659 (Accession XP_046434.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92659.

[35294] LOC93132 (Accession XP_049396.1) is another GAM281 target gene, herein designated TARGET GENE. LOC93132 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC93132, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC93132 BINDING SITE, designated SEQ ID:9953, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35295] Another function of GAM281 is therefore inhibition of LOC93132 (Accession XP_049396.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC93132.

[35296] LOC94431 (Accession NP_660280.1) is another GAM281 target gene, herein designated TARGET GENE. LOC94431 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC94431, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC94431 BINDING SITE, designated SEQ ID:18633, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35297] Another function of GAM281 is therefore inhibition of LOC94431 (Accession NP_660280.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC94431.

[35298] Lanosterol synthase (2,3-oxidosqualene-lanosterol cyclase) (LSS, Accession NP_002331.2) is another GAM281 target gene, herein designated TARGET GENE. LSS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LSS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LSS BINDING SITE, designated SEQ ID:6091, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35299] Another function of GAM281 is therefore inhibition of Lanosterol synthase (2,3-oxidosqualene-lanosterol cyclase) (LSS, Accession NP_002331.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LSS.

[35300] Leukotriene b4 receptor (LTB4R, Accession NP_000743.1) is another GAM281 target gene, herein designated TARGET GENE. LTB4R BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LTB4R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LTB4R BINDING SITE, designated SEQ ID:1022, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35301] Another function of GAM281 is therefore inhibition of Leukotriene b4 receptor (LTB4R, Accession NP_000743.1), a gene which may be the cardiac p2y receptor involved in the regulation of cardiac muscle contraction through modulation of l- type calcium currents. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LTB4R.

[35302] The function of LTB4R and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Lymphocyte antigen 75 (LY75, Accession NP_002340.1) is another GAM281 target gene, herein designated TARGET GENE. LY75 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LY75, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LY75 BINDING SITE, designated SEQ ID:17724, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35303] Another function of GAM281 is therefore inhibition of Lymphocyte antigen 75 (LY75, Accession NP_002340.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LY75.

[35304] Lysozyme (renal amyloidosis) (LYZ, Accession NP_000230.1) is another GAM281 target gene, herein designated TARGET GENE. LYZ BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LYZ, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LYZ BINDING SITE, designated SEQ ID:7382, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35305] Another function of GAM281 is therefore inhibition of Lysozyme (renal amyloidosis) (LYZ, Accession NP_000230.1), a gene which a bacteriolytic enzyme. and

therefore may be associated with Renal amyloidosis. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Renal amyloidosis, and of other diseases and clinical conditions associated with LYZ.

[35306] The function of LYZ and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Leucine zipper, putative tumor suppressor 1 (LZTS1, Accession NP_066300.1) is another GAM281 target gene, herein designated TARGET GENE. LZTS1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LZTS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LZTS1 BINDING SITE, designated SEQ ID:4518, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35307] Another function of GAM281 is therefore inhibition of Leucine zipper, putative tumor suppressor 1 (LZTS1, Accession NP_066300.1), a gene which is an essential component of the nucleoskeleton. potential role in crosslinking filaments or anchoring other molecules. it is essential

for growth. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LZTS1.

[35308] The function of LZTS1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.MAC30 (Accession XP_031536.2) is another GAM281 target gene, herein designated TARGET GENE. MAC30 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MAC30, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAC30 BINDING SITE, designated SEQ ID:5069, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35309] Another function of GAM281 is therefore inhibition of MAC30 (Accession XP_031536.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAC30.

[35310] Map-kinase activating death domain (MADD, Accession NP_569832.1) is another GAM281 target gene, herein designated TARGET GENE. MADD BINDING SITE is a target

binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MADD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MADD BINDING SITE, designated SEQ ID:3262, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35311] Another function of GAM281 is therefore inhibition of Map-kinase activating death domain (MADD, Accession NP_569832.1), a gene which may regulate two different pathways for neural activities.interacts with the type- 1 tumor necrosis factor receptor (TNFR1); death domain-containing protein. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MADD.

[35312] The function of MADD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM259.2.Map-kinase activating death domain (MADD, Accession NP_569828.1) is another GAM281 target gene, herein designated TARGET GENE. MADD BINDING SITE is a target binding site found in the 3` untranslated region of

multiple transcripts of mRNA encoded by MADD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MADD BINDING SITE, designated SEQ ID:3262, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35313] Another function of GAM281 is therefore inhibition of Map-kinase activating death domain (MADD, Accession NP_569828.1), a gene which may regulate two different pathways for neural activities.interacts with the type- 1 tumor necrosis factor receptor (TNFR1); death domain-containing protein. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MADD.

[35314] The function of MADD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM259.2.Map-kinase activating death domain (MADD, Accession NP_003673.2) is another GAM281 target gene, herein designated TARGET GENE. MADD BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MADD, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MADD BINDING SITE, designated SEQ ID:3262, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35315] Another function of GAM281 is therefore inhibition of Map-kinase activating death domain (MADD, Accession NP_003673.2), a gene which may regulate two different pathways for neural activities.interacts with the type- 1 tumor necrosis factor receptor (TNFR1); death domain-containing protein. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MADD.

[35316] The function of MADD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM259.2.Map-kinase activating death domain (MADD, Accession NP_569829.1) is another GAM281 target gene, herein designated TARGET GENE. MADD BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MADD, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MADD BINDING SITE, designated SEQ ID:3262, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35317] Another function of GAM281 is therefore inhibition of Map-kinase activating death domain (MADD, Accession NP_569829.1), a gene which may regulate two different pathways for neural activities.interacts with the type- 1 tumor necrosis factor receptor (TNFR1); death domain-containing protein. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MADD.

[35318] The function of MADD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM259.2.Map-kinase activating death domain (MADD, Accession NP_569830.1) is another GAM281 target gene, herein designated TARGET GENE. MADD BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MADD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of MADD BINDING SITE, designated SEQ ID:3262, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35319] Another function of GAM281 is therefore inhibition of Map-kinase activating death domain (MADD, Accession NP_569830.1), a gene which may regulate two different pathways for neural activities.interacts with the type- 1 tumor necrosis factor receptor (TNFR1); death domain-containing protein. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MADD.

[35320] The function of MADD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM259.2.Map-kinase activating death domain (MADD, Accession NP_569826.1) is another GAM281 target gene, herein designated TARGET GENE. MADD BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MADD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

MADD BINDING SITE, designated SEQ ID:3262, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35321] Another function of GAM281 is therefore inhibition of Map-kinase activating death domain (MADD, Accession NP_569826.1), a gene which may regulate two different pathways for neural activities.interacts with the type- 1 tumor necrosis factor receptor (TNFR1); death domain-containing protein. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MADD.

[35322] The function of MADD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM259.2.Map-kinase activating death domain (MADD, Accession NP_569831.1) is another GAM281 target gene, herein designated TARGET GENE. MADD BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MADD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MADD BINDING SITE, designated SEQ ID:3262, to the nu-

cleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35323] Another function of GAM281 is therefore inhibition of Map-kinase activating death domain (MADD, Accession NP_569831.1), a gene which may regulate two different pathways for neural activities.interacts with the type- 1 tumor necrosis factor receptor (TNFR1); death domain-containing protein. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MADD.

[35324] The function of MADD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM259.2.Map-kinase activating death domain (MADD, Accession NP_569827.1) is another GAM281 target gene, herein designated TARGET GENE. MADD BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MADD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MADD BINDING SITE, designated SEQ ID:3262, to the nucleotide sequence of GAM281 RNA, herein designated

GAM RNA, also designated SEQ ID:278.

[35325] Another function of GAM281 is therefore inhibition of Map-kinase activating death domain (MADD, Accession NP_569827.1), a gene which may regulate two different pathways for neural activities.interacts with the type- 1 tumor necrosis factor receptor (TNFR1); death domain-containing protein. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MADD.

[35326] The function of MADD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM259.2.MAIL (Accession NP_113607.1) is another GAM281 target gene, herein designated TARGET GENE. MAIL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MAIL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAIL BINDING SITE, designated SEQ ID:2338, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35327] Another function of GAM281 is therefore inhibition of

MAIL (Accession NP_113607.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAIL.

[35328] Male germ cell-associated kinase (MAK, Accession NP_005897.1) is another GAM281 target gene, herein designated TARGET GENE. MAK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MAK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAK BINDING SITE, designated SEQ ID:1989, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35329] Another function of GAM281 is therefore inhibition of Male germ cell-associated kinase (MAK, Accession NP_005897.1), a gene which plays an important role in spermatogenesis. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAK.

[35330] The function of MAK and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Mitogen-activated protein kinase kinase 1

(MAP2K1, Accession NP_002746.1) is another GAM281 target gene, herein designated TARGET GENE. MAP2K1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MAP2K1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAP2K1 BINDING SITE, designated SEQ ID:5154, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35331] Another function of GAM281 is therefore inhibition of Mitogen-activated protein kinase kinase 1 (MAP2K1, Accession NP_002746.1), a gene which is a signaling intermediate, may take part in cell transformation and therefore may be associated with Colon cancer. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Colon cancer, and of other diseases and clinical conditions associated with MAP2K1.

[35332] The function of MAP2K1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM99.1.MAPA (Accession NP_660299.1) is another GAM281 target gene, herein designated TARGET GENE.

MAPA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MAPA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAPA BINDING SITE, designated SEQ ID:5231, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35333] Another function of GAM281 is therefore inhibition of MAPA (Accession NP_660299.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAPA.

[35334] Mitogen-activated protein kinase 8 interacting protein 3 (MAPK8IP3, Accession NP_203750.1) is another GAM281 target gene, herein designated TARGET GENE. MAPK8IP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPK8IP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAPK8IP3 BINDING SITE, designated SEQ ID:14298, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ

ID:278.

[35335] Another function of GAM281 is therefore inhibition of Mitogen-activated protein kinase 8 interacting protein 3 (MAPK8IP3, Accession NP_203750.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAPK8IP3.

[35336] Microtubule-associated protein, rp/eb family, member 1 (MAPRE1, Accession NP_036457.1) is another GAM281 target gene, herein designated TARGET GENE. MAPRE1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MAPRE1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAPRE1 BINDING SITE, designated SEQ ID:20000, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35337] Another function of GAM281 is therefore inhibition of Microtubule-associated protein, rp/eb family, member 1 (MAPRE1, Accession NP_036457.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

MAPRE1.

[35338] MCLC (Accession NP_055942.1) is another GAM281 target gene, herein designated TARGET GENE. MCLC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MCLC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MCLC BINDING SITE, designated SEQ ID:7270, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35339] Another function of GAM281 is therefore inhibition of MCLC (Accession NP_055942.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MCLC.

[35340] Mdm2, transformed 3t3 cell double minute 2, p53 binding protein (mouse) (MDM2, Accession NP_006869.1) is another GAM281 target gene, herein designated TARGET GENE. MDM2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MDM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementar-

ity of the nucleotide sequences of MDM2 BINDING SITE, designated SEQ ID:6671, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35341] Another function of GAM281 is therefore inhibition of Mdm2, transformed 3t3 cell double minute 2, p53 binding protein (mouse) (MDM2, Accession NP_006869.1), a gene which binds to and downmodulates p53 (TP53) and retinoblastoma protein (RB1) function. and therefore may be associated with Tumors (including soft tissue sarcomas, osteosarcomas and gliomas). Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Tumors (including soft tissue sarcomas, osteosarcomas and gliomas)., and of other diseases and clinical conditions associated with MDM2.

[35342] The function of MDM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Mdm2, transformed 3t3 cell double minute 2, p53 binding protein (mouse) (MDM2, Accession NP_006871.1) is another GAM281 target gene, herein designated TARGET GENE. MDM2 BINDING SITE is a target binding site found in the 3` untranslated region of multi-

ple transcripts of mRNA encoded by MDM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MDM2 BINDING SITE, designated SEQ ID:6671, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35343] Another function of GAM281 is therefore inhibition of Mdm2, transformed 3t3 cell double minute 2, p53 binding protein (mouse) (MDM2, Accession NP_006871.1), a gene which binds to and downmodulates p53 (TP53) and retinoblastoma protein (RB1) function. and therefore may be associated with Tumors (including soft tissue sarcomas, osteosarcomas and gliomas). Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Tumors (including soft tissue sarcomas, osteosarcomas and gliomas)., and of other diseases and clinical conditions associated with MDM2.

[35344] The function of MDM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Mdm2, transformed 3t3 cell double minute 2, p53 binding protein (mouse) (MDM2, Accession

NP_006873.1) is another GAM281 target gene, herein designated TARGET GENE. MDM2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MDM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MDM2 BINDING SITE, designated SEQ ID:6671, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35345] Another function of GAM281 is therefore inhibition of Mdm2, transformed 3t3 cell double minute 2, p53 binding protein (mouse) (MDM2, Accession NP_006873.1), a gene which binds to and downmodulates p53 (TP53) and retinoblastoma protein (RB1) function. and therefore may be associated with Tumors (including soft tissue sarcomas, osteosarcomas and gliomas). Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Tumors (including soft tissue sarcomas, osteosarcomas and gliomas)., and of other diseases and clinical conditions associated with MDM2.

[35346] The function of MDM2 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM189.1.Mdm2, transformed 3t3 cell double minute 2, p53 binding protein (mouse) (MDM2, Accession NP_006870.1) is another GAM281 target gene, herein designated TARGET GENE. MDM2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MDM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MDM2 BINDING SITE, designated SEQ ID:6671, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35347] Another function of GAM281 is therefore inhibition of Mdm2, transformed 3t3 cell double minute 2, p53 binding protein (mouse) (MDM2, Accession NP_006870.1), a gene which binds to and downmodulates p53 (TP53) and retinoblastoma protein (RB1) function. and therefore may be associated with Tumors (including soft tissue sarcomas, osteosarcomas and gliomas). Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Tumors (including soft tissue sarcomas, osteosarcomas and gliomas)., and of other diseases and clinical condi-

tions associated with MDM2.

[35348] The function of MDM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Mdm2, transformed 3t3 cell double minute 2, p53 binding protein (mouse) (MDM2, Accession NP_006872.1) is another GAM281 target gene, herein designated TARGET GENE. MDM2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MDM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MDM2 BINDING SITE, designated SEQ ID:6671, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35349] Another function of GAM281 is therefore inhibition of Mdm2, transformed 3t3 cell double minute 2, p53 binding protein (mouse) (MDM2, Accession NP_006872.1), a gene which binds to and downmodulates p53 (TP53) and retinoblastoma protein (RB1) function. and therefore may be associated with Tumors (including soft tissue sarcomas, osteosarcomas and gliomas). Accordingly, utilities of

GAM281 include diagnosis, prevention and treatment of Tumors (including soft tissue sarcomas, osteosarcomas and gliomas)., and of other diseases and clinical conditions associated with MDM2.

[35350] The function of MDM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Mdm2, transformed 3t3 cell double minute 2, p53 binding protein (mouse) (MDM2, Accession NP_002383.1) is another GAM281 target gene, herein designated TARGET GENE. MDM2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MDM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MDM2 BINDING SITE, designated SEQ ID:6671, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35351] Another function of GAM281 is therefore inhibition of Mdm2, transformed 3t3 cell double minute 2, p53 binding protein (mouse) (MDM2, Accession NP_002383.1), a gene which binds to and downmodulates p53 (TP53) and

retinoblastoma protein (RB1) function. and therefore may be associated with Tumors (including soft tissue sarcomas, osteosarcomas and gliomas). Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Tumors (including soft tissue sarcomas, osteosarcomas and gliomas)., and of other diseases and clinical conditions associated with MDM2.

[35352] The function of MDM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Mdm4, transformed 3t3 cell double minute 4, p53 binding protein (mouse) (MDM4, Accession NP_002384.1) is another GAM281 target gene, herein designated TARGET GENE. MDM4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MDM4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MDM4 BINDING SITE, designated SEQ ID:7078, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35353] Another function of GAM281 is therefore inhibition of Mdm4, transformed 3t3 cell double minute 4, p53 binding

protein (mouse) (MDM4, Accession NP_002384.1), a gene which Strongly similar to murine Mdm4; may interact with p53. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MDM4.

[35354] The function of MDM4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.MDS009 (Accession NP_064619.1) is another GAM281 target gene, herein designated TARGET GENE. MDS009 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MDS009, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MDS009 BINDING SITE, designated SEQ ID:835, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35355] Another function of GAM281 is therefore inhibition of MDS009 (Accession NP_064619.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MDS009.

[35356] Mediterranean fever (MEFV, Accession NP_000234.1) is another GAM281 target gene, herein designated TARGET GENE. MEFV BINDING SITE1 and MEFV BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MEFV, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MEFV BINDING SITE1 and MEFV BINDING SITE2, designated SEQ ID:19829 and SEQ ID:5443 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35357] Another function of GAM281 is therefore inhibition of Mediterranean fever (MEFV, Accession NP_000234.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MEFV.

[35358] Mesoderm development candidate 2 (MESDC2, Accession XP_051854.1) is another GAM281 target gene, herein designated TARGET GENE. MESDC2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MESDC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MESDC2 BINDING SITE, designated SEQ ID:6523, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35359] Another function of GAM281 is therefore inhibition of Mesoderm development candidate 2 (MESDC2, Accession XP_051854.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MESDC2.

[35360] Microfibrillar-associated protein 4 (MFAP4, Accession NP_002395.1) is another GAM281 target gene, herein designated TARGET GENE. MFAP4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MFAP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MFAP4 BINDING SITE, designated SEQ ID:9082, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35361] Another function of GAM281 is therefore inhibition of Microfibrillar-associated protein 4 (MFAP4, Accession NP_002395.1) . Accordingly, utilities of GAM281 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with MFAP4.

[35362] MFTC (Accession NP_110407.2) is another GAM281 target gene, herein designated TARGET GENE. MFTC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MFTC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MFTC BINDING SITE, designated SEQ ID:16545, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35363] Another function of GAM281 is therefore inhibition of MFTC (Accession NP_110407.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MFTC.

[35364] Mannosyl (alpha-1,6-)-glycoprotein beta-1,2-n-acetylglucosaminyltransferase (MGAT2, Accession NP_079374.1) is another GAM281 target gene, herein designated TARGET GENE. MGAT2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MGAT2, corresponding to a target binding site such as BINDING SITE I, BIND-

ING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGAT2 BINDING SITE, designated SEQ ID:9699, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35365] Another function of GAM281 is therefore inhibition of Mannosyl (alpha-1,6-)-glycoprotein beta-1,2-n-acetylglucosaminyltransferase (MGAT2, Accession NP_079374.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGAT2.

[35366] MGC10200 (Accession NP_659497.1) is another GAM281 target gene, herein designated TARGET GENE. MGC10200 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC10200, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10200 BINDING SITE, designated SEQ ID:5781, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35367] Another function of GAM281 is therefore inhibition of MGC10200 (Accession NP_659497.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10200.

[35368] MGC10772 (Accession NP_085044.2) is another GAM281 target gene, herein designated TARGET GENE. MGC10772 BINDING SITE1 and MGC10772 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC10772, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10772 BINDING SITE1 and MGC10772 BINDING SITE2, designated SEQ ID:6519 and SEQ ID:5386 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35369] Another function of GAM281 is therefore inhibition of MGC10772 (Accession NP_085044.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10772.

[35370] MGC10818 (Accession NP_085045.2) is another GAM281 target gene, herein designated TARGET GENE. MGC10818 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by MGC10818, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10818 BINDING SITE, designated SEQ ID:2199, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35371] Another function of GAM281 is therefore inhibition of MGC10818 (Accession NP_085045.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10818.

[35372] MGC11102 (Accession NP_115701.2) is another GAM281 target gene, herein designated TARGET GENE. MGC11102 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC11102, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC11102 BINDING SITE, designated SEQ ID:17609, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35373] Another function of GAM281 is therefore inhibition of

MGC11102 (Accession NP_115701.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC11102.

[35374] MGC12262 (Accession NP_116085.1) is another GAM281 target gene, herein designated TARGET GENE. MGC12262 BINDING SITE1 and MGC12262 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC12262, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC12262 BINDING SITE1 and MGC12262 BINDING SITE2, designated SEQ ID:4245 and SEQ ID:12220 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35375] Another function of GAM281 is therefore inhibition of MGC12262 (Accession NP_116085.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC12262.

[35376] MGC12518 (Accession NP_291026.1) is another GAM281 target gene, herein designated TARGET GENE. MGC12518

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC12518, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC12518 BINDING SITE, designated SEQ ID:18251, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35377] Another function of GAM281 is therefore inhibition of MGC12518 (Accession NP_291026.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC12518.

[35378] MGC12760 (Accession NP_116112.1) is another GAM281 target gene, herein designated TARGET GENE. MGC12760 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC12760, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC12760 BINDING SITE, designated SEQ ID:10178, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35379] Another function of GAM281 is therefore inhibition of MGC12760 (Accession NP_116112.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC12760.

[35380] MGC13017 (Accession NP_542387.1) is another GAM281 target gene, herein designated TARGET GENE. MGC13017 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC13017, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC13017 BINDING SITE, designated SEQ ID:11562, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35381] Another function of GAM281 is therefore inhibition of MGC13017 (Accession NP_542387.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13017.

[35382] MGC13024 (Accession NP_689501.1) is another GAM281 target gene, herein designated TARGET GENE. MGC13024 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by MGC13024, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC13024 BINDING SITE, designated SEQ ID:13564, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35383] Another function of GAM281 is therefore inhibition of MGC13024 (Accession NP_689501.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13024.

[35384] MGC13138 (Accession NP_219363.1) is another GAM281 target gene, herein designated TARGET GENE. MGC13138 BINDING SITE1 and MGC13138 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC13138, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC13138 BINDING SITE1 and MGC13138 BINDING SITE2, designated SEQ ID:6646 and SEQ ID:9543 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:278.

[35385] Another function of GAM281 is therefore inhibition of MGC13138 (Accession NP_219363.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13138.

[35386] MGC13170 (Accession NP_116101.1) is another GAM281 target gene, herein designated TARGET GENE. MGC13170 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC13170, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC13170 BINDING SITE, designated SEQ ID:20116, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35387] Another function of GAM281 is therefore inhibition of MGC13170 (Accession NP_116101.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13170.

[35388] MGC13204 (Accession NP_113653.1) is another GAM281 target gene, herein designated TARGET GENE. MGC13204

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC13204, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC13204 BINDING SITE, designated SEQ ID:9494, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35389] Another function of GAM281 is therefore inhibition of MGC13204 (Accession NP_113653.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC13204.

[35390] MGC14289 (Accession NP_542391.1) is another GAM281 target gene, herein designated TARGET GENE. MGC14289 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC14289, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14289 BINDING SITE, designated SEQ ID:3677, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35391] Another function of GAM281 is therefore inhibition of MGC14289 (Accession NP_542391.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC14289.

[35392] MGC14436 (Accession NP_116286.1) is another GAM281 target gene, herein designated TARGET GENE. MGC14436 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC14436, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14436 BINDING SITE, designated SEQ ID:17347, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35393] Another function of GAM281 is therefore inhibition of MGC14436 (Accession NP_116286.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC14436.

[35394] MGC14836 (Accession NP_219480.1) is another GAM281 target gene, herein designated TARGET GENE. MGC14836 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by MGC14836, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC14836 BINDING SITE, designated SEQ ID:15044, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35395] Another function of GAM281 is therefore inhibition of MGC14836 (Accession NP_219480.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC14836.

[35396] MGC15606 (Accession NP_659474.1) is another GAM281 target gene, herein designated TARGET GENE. MGC15606 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC15606, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC15606 BINDING SITE, designated SEQ ID:10968, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35397] Another function of GAM281 is therefore inhibition of

MGC15606 (Accession NP_659474.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC15606.

[35398] MGC15668 (Accession NP_116145.1) is another GAM281 target gene, herein designated TARGET GENE. MGC15668 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC15668, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC15668 BINDING SITE, designated SEQ ID:3620, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35399] Another function of GAM281 is therefore inhibition of MGC15668 (Accession NP_116145.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC15668.

[35400] MGC15873 (Accession NP_116309.1) is another GAM281 target gene, herein designated TARGET GENE. MGC15873 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC15873, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC15873 BINDING SITE, designated SEQ ID:2894, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35401] Another function of GAM281 is therefore inhibition of MGC15873 (Accession NP_116309.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC15873.

[35402] MGC16179 (Accession NP_116155.1) is another GAM281 target gene, herein designated TARGET GENE. MGC16179 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC16179, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC16179 BINDING SITE, designated SEQ ID:15168, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35403] Another function of GAM281 is therefore inhibition of MGC16179 (Accession NP_116155.1) . Accordingly, utili-

ties of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC16179.

[35404] MGC1842 (Accession XP_037797.2) is another GAM281 target gene, herein designated TARGET GENE. MGC1842 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC1842, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC1842 BINDING SITE, designated SEQ ID:15046, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35405] Another function of GAM281 is therefore inhibition of MGC1842 (Accession XP_037797.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC1842.

[35406] MGC21675 (Accession NP_443093.1) is another GAM281 target gene, herein designated TARGET GENE. MGC21675 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC21675, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC21675 BINDING SITE, designated SEQ ID:16916, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35407] Another function of GAM281 is therefore inhibition of MGC21675 (Accession NP_443093.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC21675.

[35408] MGC2306 (Accession NP_002041.2) is another GAM281 target gene, herein designated TARGET GENE. MGC2306 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC2306, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC2306 BINDING SITE, designated SEQ ID:7160, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35409] Another function of GAM281 is therefore inhibition of MGC2306 (Accession NP_002041.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with MGC2306.

[35410] MGC2474 (Accession NP_076420.1) is another GAM281 target gene, herein designated TARGET GENE. MGC2474 BINDING SITE1 and MGC2474 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC2474, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC2474 BINDING SITE1 and MGC2474 BINDING SITE2, designated SEQ ID:7797 and SEQ ID:18665 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35411] Another function of GAM281 is therefore inhibition of MGC2474 (Accession NP_076420.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2474.

[35412] MGC2477 (Accession NP_077004.1) is another GAM281 target gene, herein designated TARGET GENE. MGC2477 BINDING SITE1 through MGC2477 BINDING SITE3 are target binding sites found in untranslated regions of mRNA

encoded by MGC2477, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC2477 BINDING SITE1 through MGC2477 BINDING SITE3, designated SEQ ID:5609, SEQ ID:19729 and SEQ ID:8610 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35413] Another function of GAM281 is therefore inhibition of MGC2477 (Accession NP_077004.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2477.

[35414] MGC2603 (Accession NP_076942.1) is another GAM281 target gene, herein designated TARGET GENE. MGC2603 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC2603, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC2603 BINDING SITE, designated SEQ ID:5845, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35415] Another function of GAM281 is therefore inhibition of MGC2603 (Accession NP_076942.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2603.

[35416] MGC26914 (Accession NP_659413.1) is another GAM281 target gene, herein designated TARGET GENE. MGC26914 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC26914, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC26914 BINDING SITE, designated SEQ ID:15104, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35417] Another function of GAM281 is therefore inhibition of MGC26914 (Accession NP_659413.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC26914.

[35418] MGC2718 (Accession NP_076972.2) is another GAM281 target gene, herein designated TARGET GENE. MGC2718 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by MGC2718, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC2718 BINDING SITE, designated SEQ ID:3976, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35419] Another function of GAM281 is therefore inhibition of MGC2718 (Accession NP_076972.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2718.

[35420] MGC27345 (Accession XP_300964.1) is another GAM281 target gene, herein designated TARGET GENE. MGC27345 BINDING SITE1 and MGC27345 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by MGC27345, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC27345 BINDING SITE1 and MGC27345 BINDING SITE2, designated SEQ ID:18352 and SEQ ID:19385 respectively, to the nucleotide sequence of GAM281 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:278.

[35421] Another function of GAM281 is therefore inhibition of MGC27345 (Accession XP_300964.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC27345.

[35422] MGC29891 (Accession NP_653219.1) is another GAM281 target gene, herein designated TARGET GENE. MGC29891 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC29891, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC29891 BINDING SITE, designated SEQ ID:14858, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35423] Another function of GAM281 is therefore inhibition of MGC29891 (Accession NP_653219.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC29891.

[35424] MGC29898 (Accession NP_659485.1) is another GAM281 target gene, herein designated TARGET GENE. MGC29898

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC29898, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC29898 BINDING SITE, designated SEQ ID:16672, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35425] Another function of GAM281 is therefore inhibition of MGC29898 (Accession NP_659485.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC29898.

[35426] MGC3113 (Accession NP_076940.1) is another GAM281 target gene, herein designated TARGET GENE. MGC3113 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC3113, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC3113 BINDING SITE, designated SEQ ID:10136, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35427] Another function of GAM281 is therefore inhibition of MGC3113 (Accession NP_076940.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC3113.

[35428] MGC3207 (Accession NP_115661.1) is another GAM281 target gene, herein designated TARGET GENE. MGC3207 BINDING SITE1 and MGC3207 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC3207, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC3207 BINDING SITE1 and MGC3207 BINDING SITE2, designated SEQ ID:5157 and SEQ ID:13812 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35429] Another function of GAM281 is therefore inhibition of MGC3207 (Accession NP_115661.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC3207.

[35430] MGC3329 (Accession NP_076991.2) is another GAM281

target gene, herein designated TARGET GENE. MGC3329 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC3329, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC3329 BINDING SITE, designated SEQ ID:4477, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35431] Another function of GAM281 is therefore inhibition of MGC3329 (Accession NP_076991.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC3329.

[35432] MGC33486 (Accession NP_694998.1) is another GAM281 target gene, herein designated TARGET GENE. MGC33486 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC33486, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC33486 BINDING SITE, designated SEQ ID:11585, to the nucleotide sequence of GAM281 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:278.

[35433] Another function of GAM281 is therefore inhibition of MGC33486 (Accession NP_694998.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC33486.

[35434] MGC33637 (Accession NP_689809.1) is another GAM281 target gene, herein designated TARGET GENE. MGC33637 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC33637, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC33637 BINDING SITE, designated SEQ ID:12069, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35435] Another function of GAM281 is therefore inhibition of MGC33637 (Accession NP_689809.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC33637.

[35436] MGC33887 (Accession NP_659473.1) is another GAM281 target gene, herein designated TARGET GENE. MGC33887

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC33887, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC33887 BINDING SITE, designated SEQ ID:8724, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35437] Another function of GAM281 is therefore inhibition of MGC33887 (Accession NP_659473.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC33887.

[35438] MGC34034 (Accession NP_694956.1) is another GAM281 target gene, herein designated TARGET GENE. MGC34034 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC34034, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC34034 BINDING SITE, designated SEQ ID:9529, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35439] Another function of GAM281 is therefore inhibition of MGC34034 (Accession NP_694956.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC34034.

[35440] MGC34079 (Accession NP_689688.1) is another GAM281 target gene, herein designated TARGET GENE. MGC34079 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC34079, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC34079 BINDING SITE, designated SEQ ID:19817, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35441] Another function of GAM281 is therefore inhibition of MGC34079 (Accession NP_689688.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC34079.

[35442] MGC34132 (Accession XP_291029.1) is another GAM281 target gene, herein designated TARGET GENE. MGC34132 BINDING SITE1 and MGC34132 BINDING SITE2 are target

binding sites found in untranslated regions of mRNA encoded by MGC34132, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC34132 BINDING SITE1 and MGC34132 BINDING SITE2, designated SEQ ID:9087 and SEQ ID:8232 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35443] Another function of GAM281 is therefore inhibition of MGC34132 (Accession XP_291029.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC34132.

[35444] MGC35136 (Accession NP_689640.1) is another GAM281 target gene, herein designated TARGET GENE. MGC35136 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC35136, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC35136 BINDING SITE, designated SEQ ID:8535, to the nucleotide sequence of GAM281 RNA, herein designated

GAM RNA, also designated SEQ ID:278.

[35445] Another function of GAM281 is therefore inhibition of MGC35136 (Accession NP_689640.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC35136.

[35446] MGC35440 (Accession NP_694952.1) is another GAM281 target gene, herein designated TARGET GENE. MGC35440 BINDING SITE1 and MGC35440 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC35440, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC35440 BINDING SITE1 and MGC35440 BINDING SITE2, designated SEQ ID:7378 and SEQ ID:6886 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35447] Another function of GAM281 is therefore inhibition of MGC35440 (Accession NP_694952.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC35440.

[35448] MGC35468 (Accession NP_694976.1) is another GAM281 target gene, herein designated TARGET GENE. MGC35468 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC35468, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC35468 BINDING SITE, designated SEQ ID:7484, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35449] Another function of GAM281 is therefore inhibition of MGC35468 (Accession NP_694976.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC35468.

[35450] MGC3771 (Accession NP_112232.1) is another GAM281 target gene, herein designated TARGET GENE. MGC3771 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC3771, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC3771 BINDING SITE, designated SEQ ID:3231, to the

nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35451] Another function of GAM281 is therefore inhibition of MGC3771 (Accession NP_112232.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC3771.

[35452] MGC39320 (Accession NP_689642.2) is another GAM281 target gene, herein designated TARGET GENE. MGC39320 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC39320, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC39320 BINDING SITE, designated SEQ ID:13428, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35453] Another function of GAM281 is therefore inhibition of MGC39320 (Accession NP_689642.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC39320.

[35454] MGC40157 (Accession NP_689563.1) is another GAM281

target gene, herein designated TARGET GENE. MGC40157 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC40157, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC40157 BINDING SITE, designated SEQ ID:10743, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35455] Another function of GAM281 is therefore inhibition of MGC40157 (Accession NP_689563.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC40157.

[35456] MGC40168 (Accession NP_714920.1) is another GAM281 target gene, herein designated TARGET GENE. MGC40168 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC40168, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC40168 BINDING SITE, designated SEQ ID:7220, to the nucleotide sequence of GAM281 RNA, herein designated

GAM RNA, also designated SEQ ID:278.

[35457] Another function of GAM281 is therefore inhibition of MGC40168 (Accession NP_714920.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC40168.

[35458] MGC40579 (Accession NP_689989.1) is another GAM281 target gene, herein designated TARGET GENE. MGC40579 BINDING SITE1 and MGC40579 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC40579, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC40579 BINDING SITE1 and MGC40579 BINDING SITE2, designated SEQ ID:16218 and SEQ ID:19220 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35459] Another function of GAM281 is therefore inhibition of MGC40579 (Accession NP_689989.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC40579.

[35460] MGC4171 (Accession NP_077283.1) is another GAM281 target gene, herein designated TARGET GENE. MGC4171 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC4171, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC4171 BINDING SITE, designated SEQ ID:10555, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35461] Another function of GAM281 is therefore inhibition of MGC4171 (Accession NP_077283.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC4171.

[35462] MGC4248 (Accession NP_115709.2) is another GAM281 target gene, herein designated TARGET GENE. MGC4248 BINDING SITE1 and MGC4248 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC4248, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC4248 BINDING SITE1 and

MGC4248 BINDING SITE2, designated SEQ ID:3338 and SEQ ID:8539 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35463] Another function of GAM281 is therefore inhibition of MGC4248 (Accession NP_115709.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC4248.

[35464] MGC43122 (Accession NP_775784.1) is another GAM281 target gene, herein designated TARGET GENE. MGC43122 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC43122, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC43122 BINDING SITE, designated SEQ ID:12783, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35465] Another function of GAM281 is therefore inhibition of MGC43122 (Accession NP_775784.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

MGC43122.

[35466] MGC4606 (Accession NP_078792.1) is another GAM281 target gene, herein designated TARGET GENE. MGC4606 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC4606, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC4606 BINDING SITE, designated SEQ ID:11069, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35467] Another function of GAM281 is therefore inhibition of MGC4606 (Accession NP_078792.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC4606.

[35468] MGC50452 (Accession NP_775733.1) is another GAM281 target gene, herein designated TARGET GENE. MGC50452 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC50452, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

MGC50452 BINDING SITE, designated SEQ ID:16867, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35469] Another function of GAM281 is therefore inhibition of MGC50452 (Accession NP_775733.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC50452.

[35470] MGC50559 (Accession NP_776163.1) is another GAM281 target gene, herein designated TARGET GENE. MGC50559 BINDING SITE1 and MGC50559 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MGC50559, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC50559 BINDING SITE1 and MGC50559 BINDING SITE2, designated SEQ ID:15151 and SEQ ID:11296 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35471] Another function of GAM281 is therefore inhibition of MGC50559 (Accession NP_776163.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with MGC50559.

[35472] MGC5149 (Accession XP_051200.2) is another GAM281 target gene, herein designated TARGET GENE. MGC5149 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC5149, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC5149 BINDING SITE, designated SEQ ID:13759, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35473] Another function of GAM281 is therefore inhibition of MGC5149 (Accession XP_051200.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC5149.

[35474] MGC9912 (Accession NP_542395.1) is another GAM281 target gene, herein designated TARGET GENE. MGC9912 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC9912, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of MGC9912 BINDING SITE, designated SEQ ID:12221, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35475] Another function of GAM281 is therefore inhibition of MGC9912 (Accession NP_542395.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC9912.

[35476] MGRN1 (Accession XP_048119.4) is another GAM281 target gene, herein designated TARGET GENE. MGRN1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGRN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGRN1 BINDING SITE, designated SEQ ID:16616, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35477] Another function of GAM281 is therefore inhibition of MGRN1 (Accession XP_048119.4) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGRN1.

[35478] Mhc class ii transactivator (MHC2TA, Accession NP_000237.1) is another GAM281 target gene, herein designated TARGET GENE. MHC2TA BINDING SITE1 through MHC2TA BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by MHC2TA, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MHC2TA BINDING SITE1 through MHC2TA BINDING SITE3, designated SEQ ID:783, SEQ ID:2053 and SEQ ID:922 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35479] Another function of GAM281 is therefore inhibition of Mhc class ii transactivator (MHC2TA, Accession NP_000237.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MHC2TA.

[35480] MIRAB13 (Accession XP_039236.6) is another GAM281 target gene, herein designated TARGET GENE. MIRAB13 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MIRAB13, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MIRAB13 BINDING SITE, designated SEQ ID:11523, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35481] Another function of GAM281 is therefore inhibition of MIRAB13 (Accession XP_039236.6) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MIRAB13.

[35482] MIRAB13 (Accession NP_203744.1) is another GAM281 target gene, herein designated TARGET GENE. MIRAB13 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MIRAB13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MIRAB13 BINDING SITE, designated SEQ ID:11523, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35483] Another function of GAM281 is therefore inhibition of

MIRAB13 (Accession NP_203744.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MIRAB13.

[35484] Makorin, ring finger protein, 4 (MKRN4, Accession NP_110384.1) is another GAM281 target gene, herein designated TARGET GENE. MKRN4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MKRN4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MKRN4 BINDING SITE, designated SEQ ID:12075, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35485] Another function of GAM281 is therefore inhibition of Makorin, ring finger protein, 4 (MKRN4, Accession NP_110384.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MKRN4.

[35486] Melan-a (MLANA, Accession NP_005502.1) is another GAM281 target gene, herein designated TARGET GENE. MLANA BINDING SITE is a target binding site found in the

3` untranslated region of mRNA encoded by MLANA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MLANA BINDING SITE, designated SEQ ID:13029, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35487] Another function of GAM281 is therefore inhibition of Melan-a (MLANA, Accession NP_005502.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MLANA.

[35488] Megalencephalic leukoencephalopathy with subcortical cysts 1 (MLC1, Accession NP_055981.1) is another GAM281 target gene, herein designated TARGET GENE. MLC1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MLC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MLC1 BINDING SITE, designated SEQ ID:19859, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ

ID:278.

[35489] Another function of GAM281 is therefore inhibition of Megalencephalic leukoencephalopathy with subcortical cysts 1 (MLC1, Accession NP_055981.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MLC1.

[35490] Megalencephalic leukoencephalopathy with subcortical cysts 1 (MLC1, Accession NP_055981.1) is another GAM281 target gene, herein designated TARGET GENE. MLC1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MLC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MLC1 BINDING SITE, designated SEQ ID:19859, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35491] Another function of GAM281 is therefore inhibition of Megalencephalic leukoencephalopathy with subcortical cysts 1 (MLC1, Accession NP_055981.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with MLC1.

[35492] Megalencephalic leukoencephalopathy with subcortical cysts 1 (MLC1, Accession NP_631941.1) is another GAM281 target gene, herein designated TARGET GENE. MLC1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MLC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MLC1 BINDING SITE, designated SEQ ID:19859, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35493] Another function of GAM281 is therefore inhibition of Megalencephalic leukoencephalopathy with subcortical cysts 1 (MLC1, Accession NP_631941.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MLC1.

[35494] Megalencephalic leukoencephalopathy with subcortical cysts 1 (MLC1, Accession NP_631941.1) is another GAM281 target gene, herein designated TARGET GENE.

MLC1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MLC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MLC1 BINDING SITE, designated SEQ ID:19859, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35495] Another function of GAM281 is therefore inhibition of Megalencephalic leukoencephalopathy with subcortical cysts 1 (MLC1, Accession NP_631941.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MLC1.

[35496] Melanoma-derived leucine zipper, extra-nuclear factor (MLZE, Accession NP_113603.1) is another GAM281 target gene, herein designated TARGET GENE. MLZE BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MLZE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MLZE BIND-

ING SITE, designated SEQ ID:9728, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35497] Another function of GAM281 is therefore inhibition of Melanoma-derived leucine zipper, extra-nuclear factor (MLZE, Accession NP_113603.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MLZE.

[35498] Matrix metalloproteinase-like 1 (MMPL1, Accession NP_004133.1) is another GAM281 target gene, herein designated TARGET GENE. MMPL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MMPL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MMPL1 BINDING SITE, designated SEQ ID:4374, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35499] Another function of GAM281 is therefore inhibition of Matrix metalloproteinase-like 1 (MMPL1, Accession NP_004133.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MMPL1.

[35500] MO25 (Accession NP_057373.1) is another GAM281 target gene, herein designated TARGET GENE. MO25 BINDING SITE1 and MO25 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MO25, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MO25 BINDING SITE1 and MO25 BINDING SITE2, designated SEQ ID:7980 and SEQ ID:2695 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35501] Another function of GAM281 is therefore inhibition of MO25 (Accession NP_057373.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MO25.

[35502] Modulator of apoptosis 1 (MOAP1, Accession NP_071434.2) is another GAM281 target gene, herein designated TARGET GENE. MOAP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MOAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MOAP1 BINDING SITE, designated

SEQ ID:1744, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35503] Another function of GAM281 is therefore inhibition of Modulator of apoptosis 1 (MOAP1, Accession NP_071434.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MOAP1.

[35504] moblak (Accession NP_570719.1) is another GAM281 target gene, herein designated TARGET GENE. moblak BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by moblak, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of moblak BINDING SITE, designated SEQ ID:19657, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35505] Another function of GAM281 is therefore inhibition of moblak (Accession NP_570719.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with moblak.

[35506] Molybdenum cofactor synthesis 3 (MOCS3, Accession NP_055299.1) is another GAM281 target gene, herein

designated TARGET GENE. MOCS3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MOCS3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MOCS3 BINDING SITE, designated SEQ ID:12064, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35507] Another function of GAM281 is therefore inhibition of Molybdenum cofactor synthesis 3 (MOCS3, Accession NP_055299.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MOCS3.

[35508] Myeloproliferative leukemia virus oncogene (MPL, Accession NP_005364.1) is another GAM281 target gene, herein designated TARGET GENE. MPL BINDING SITE1 and MPL BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by MPL, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MPL BINDING SITE1 and MPL BINDING SITE2, designated SEQ ID:16608

and SEQ ID:11185 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35509] Another function of GAM281 is therefore inhibition of Myeloproliferative leukemia virus oncogene (MPL, Accession NP_005364.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MPL.

[35510] Mitochondrial ribosomal protein l10 (MRPL10, Accession NP_683685.1) is another GAM281 target gene, herein designated TARGET GENE. MRPL10 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MRPL10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL10 BINDING SITE, designated SEQ ID:13874, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35511] Another function of GAM281 is therefore inhibition of Mitochondrial ribosomal protein l10 (MRPL10, Accession NP_683685.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with MRPL10.

[35512] Mitochondrial ribosomal protein l35 (MRPL35, Accession NP_057706.2) is another GAM281 target gene, herein designated TARGET GENE. MRPL35 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MRPL35, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL35 BINDING SITE, designated SEQ ID:9545, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35513] Another function of GAM281 is therefore inhibition of Mitochondrial ribosomal protein l35 (MRPL35, Accession NP_057706.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL35.

[35514] Mitochondrial ribosomal protein l44 (MRPL44, Accession NP_075066.1) is another GAM281 target gene, herein designated TARGET GENE. MRPL44 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MRPL44, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL44 BINDING SITE, designated SEQ ID:14596, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35515] Another function of GAM281 is therefore inhibition of Mitochondrial ribosomal protein l44 (MRPL44, Accession NP_075066.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL44.

[35516] Mitochondrial ribosomal protein l49 (MRPL49, Accession NP_004918.1) is another GAM281 target gene, herein designated TARGET GENE. MRPL49 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MRPL49, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPL49 BINDING SITE, designated SEQ ID:5438, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35517] Another function of GAM281 is therefore inhibition of Mitochondrial ribosomal protein l49 (MRPL49, Accession

NP_004918.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPL49.

[35518] Mitochondrial ribosomal protein s27 (MRPS27, Accession NP_055899.1) is another GAM281 target gene, herein designated TARGET GENE. MRPS27 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MRPS27, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MRPS27 BINDING SITE, designated SEQ ID:4179, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35519] Another function of GAM281 is therefore inhibition of Mitochondrial ribosomal protein s27 (MRPS27, Accession NP_055899.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MRPS27.

[35520] MSTP028 (Accession NP_114160.1) is another GAM281 target gene, herein designated TARGET GENE. MSTP028 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MSTP028, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MSTP028 BINDING SITE, designated SEQ ID:12951, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35521] Another function of GAM281 is therefore inhibition of MSTP028 (Accession NP_114160.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MSTP028.

[35522] MtFMT (Accession NP_640335.1) is another GAM281 target gene, herein designated TARGET GENE. MtFMT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MtFMT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MtFMT BINDING SITE, designated SEQ ID:12918, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35523] Another function of GAM281 is therefore inhibition of MtFMT (Accession NP_640335.1) . Accordingly, utilities of

GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MtFMT.

[35524] MTH2 (Accession NP_060753.1) is another GAM281 target gene, herein designated TARGET GENE. MTH2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTH2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MTH2 BINDING SITE, designated SEQ ID:15874, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35525] Another function of GAM281 is therefore inhibition of MTH2 (Accession NP_060753.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MTH2.

[35526] 5-methyltetrahydrofolate-homocysteine methyltransferase (MTR, Accession NP_000245.1) is another GAM281 target gene, herein designated TARGET GENE. MTR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the com-

plementarity of the nucleotide sequences of MTR BINDING SITE, designated SEQ ID:2028, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35527] Another function of GAM281 is therefore inhibition of 5-methyltetrahydrofolate-homocysteine methyltransferase (MTR, Accession NP_000245.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MTR.

[35528] MU (Accession NP_071368.1) is another GAM281 target gene, herein designated TARGET GENE. MU BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MU BINDING SITE, designated SEQ ID:2453, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35529] Another function of GAM281 is therefore inhibition of MU (Accession NP_071368.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with MU.

[35530] V-myc myelocytomatosis viral oncogene homolog 2 (avian) (MYCL2, Accession NP_005368.1) is another GAM281 target gene, herein designated TARGET GENE. MYCL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MYCL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYCL2 BINDING SITE, designated SEQ ID:16868, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35531] Another function of GAM281 is therefore inhibition of V-myc myelocytomatosis viral oncogene homolog 2 (avian) (MYCL2, Accession NP_005368.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYCL2.

[35532] MYLC2PL (Accession NP_612412.1) is another GAM281 target gene, herein designated TARGET GENE. MYLC2PL BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MYLC2PL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of MYLC2PL BINDING SITE, designated SEQ ID:3580, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35533] Another function of GAM281 is therefore inhibition of MYLC2PL (Accession NP_612412.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYLC2PL.

[35534] Myosin 5c (MYO5C, Accession NP_061198.1) is another GAM281 target gene, herein designated TARGET GENE. MYO5C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MYO5C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYO5C BINDING SITE, designated SEQ ID:4306, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35535] Another function of GAM281 is therefore inhibition of Myosin 5c (MYO5C, Accession NP_061198.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associ-

ated with MYO5C.

[35536] NACT (Accession NP_808218.1) is another GAM281 target gene, herein designated TARGET GENE. NACT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NACT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NACT BINDING SITE, designated SEQ ID:19968, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35537] Another function of GAM281 is therefore inhibition of NACT (Accession NP_808218.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NACT.

[35538] NALP12 (Accession NP_150639.1) is another GAM281 target gene, herein designated TARGET GENE. NALP12 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by NALP12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NALP12 BINDING SITE, designated

SEQ ID:3395, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35539] Another function of GAM281 is therefore inhibition of NALP12 (Accession NP_150639.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NALP12.

[35540] Nanog (Accession NP_079141.1) is another GAM281 target gene, herein designated TARGET GENE. Nanog BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by Nanog, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of Nanog BINDING SITE, designated SEQ ID:11523, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35541] Another function of GAM281 is therefore inhibition of Nanog (Accession NP_079141.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Nanog.

[35542] NCAG1 (Accession NP_115536.1) is another GAM281 target gene, herein designated TARGET GENE. NCAG1 BIND-

ING SITE1 and NCAG1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by NCAG1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NCAG1 BINDING SITE1 and NCAG1 BINDING SITE2, designated SEQ ID:3933 and SEQ ID:3766 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35543] Another function of GAM281 is therefore inhibition of NCAG1 (Accession NP_115536.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NCAG1.

[35544] Nuclear receptor coactivator 6 (NCOA6, Accession NP_054790.1) is another GAM281 target gene, herein designated TARGET GENE. NCOA6 BINDING SITE1 and NCOA6 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by NCOA6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NCOA6 BINDING SITE1 and NCOA6 BINDING SITE2, designated SEQ ID:12826 and SEQ ID:19446 respectively, to the

nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35545] Another function of GAM281 is therefore inhibition of Nuclear receptor coactivator 6 (NCOA6, Accession NP_054790.1), a gene which activates gene transcription through ligand- dependent association with coactivators. and therefore may be associated with Breast cancer. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Breast cancer., and of other diseases and clinical conditions associated with NCOA6.

[35546] The function of NCOA6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM161.1.Nuclear receptor coactivator 6 interacting protein (NCOA6IP, Accession NP_079107.5) is another GAM281 target gene, herein designated TARGET GENE. NCOA6IP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NCOA6IP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NCOA6IP BINDING SITE, designated SEQ ID:8841, to the nucleotide sequence of GAM281 RNA,

herein designated GAM RNA, also designated SEQ ID:278.

[35547] Another function of GAM281 is therefore inhibition of Nuclear receptor coactivator 6 interacting protein (NCOA6IP, Accession NP_079107.5) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NCOA6IP.

[35548] NDP52 (Accession NP_005822.1) is another GAM281 target gene, herein designated TARGET GENE. NDP52 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NDP52, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NDP52 BINDING SITE, designated SEQ ID:15337, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35549] Another function of GAM281 is therefore inhibition of NDP52 (Accession NP_005822.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NDP52.

[35550] Ndrg family member 3 (NDRG3, Accession NP_114402.1) is another GAM281 target gene, herein designated TARGET GENE. NDRG3 BINDING SITE is a target binding site

found in the 3` untranslated region of multiple transcripts of mRNA encoded by NDRG3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NDRG3 BINDING SITE, designated SEQ ID:15102, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35551] Another function of GAM281 is therefore inhibition of Ndrg family member 3 (NDRG3, Accession NP_114402.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NDRG3.

[35552] Ndrg family member 4 (NDRG4, Accession NP_075061.1) is another GAM281 target gene, herein designated TARGET GENE. NDRG4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NDRG4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NDRG4 BINDING SITE, designated SEQ ID:6180, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:278.

[35553] Another function of GAM281 is therefore inhibition of Ndrg family member 4 (NDRG4, Accession NP_075061.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NDRG4.

[35554] Ndrg family member 4 (NDRG4, Accession NP_065198.1) is another GAM281 target gene, herein designated TARGET GENE. NDRG4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NDRG4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NDRG4 BINDING SITE, designated SEQ ID:6180, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35555] Another function of GAM281 is therefore inhibition of Ndrg family member 4 (NDRG4, Accession NP_065198.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NDRG4.

[35556] Nadh dehydrogenase (ubiquinone) 1, subcomplex un-

known, 2, 14.5kda (NDUFC2, Accession NP_004540.1) is another GAM281 target gene, herein designated TARGET GENE. NDUFC2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NDUFC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NDUFC2 BINDING SITE, designated SEQ ID:10192, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35557] Another function of GAM281 is therefore inhibition of Nadh dehydrogenase (ubiquinone) 1, subcomplex unknown, 2, 14.5kda (NDUFC2, Accession NP_004540.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NDUFC2.

[35558] Nadh dehydrogenase (ubiquinone) fe-s protein 1, 75kda (nadh-coenzyme q reductase) (NDUFS1, Accession NP_004997.3) is another GAM281 target gene, herein designated TARGET GENE. NDUFS1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NDUFS1, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NDUFS1 BINDING SITE, designated SEQ ID:20168, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35559] Another function of GAM281 is therefore inhibition of Nadh dehydrogenase (ubiquinone) fe-s protein 1, 75kda (nadh-coenzyme q reductase) (NDUFS1, Accession NP_004997.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NDUFS1.

[35560] Sialidase 3 (membrane sialidase) (NEU3, Accession NP_006647.2) is another GAM281 target gene, herein designated TARGET GENE. NEU3 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NEU3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NEU3 BINDING SITE, designated SEQ ID:12075, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35561] Another function of GAM281 is therefore inhibition of Sialidase 3 (membrane sialidase) (NEU3, Accession NP_006647.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NEU3.

[35562] Neurofibromin 2 (bilateral acoustic neuroma) (NF2, Accession NP_057502.1) is another GAM281 target gene, herein designated TARGET GENE. NF2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by NF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NF2 BINDING SITE, designated SEQ ID:9169, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35563] Another function of GAM281 is therefore inhibition of Neurofibromin 2 (bilateral acoustic neuroma) (NF2, Accession NP_057502.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NF2.

[35564] Non-pou domain containing, octamer-binding (NONO, Accession NP_031389.2) is another GAM281 target gene,

herein designated TARGET GENE. NONO BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NONO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NONO BINDING SITE, designated SEQ ID:17960, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35565] Another function of GAM281 is therefore inhibition of Non-pou domain containing, octamer-binding (NONO, Accession NP_031389.2), a gene which is a nuclear protein which contains RNA recognition motifs. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NONO.

[35566] The function of NONO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.NOSIP (Accession NP_057037.1) is another GAM281 target gene, herein designated TARGET GENE. NOSIP BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NOSIP, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NOSIP BINDING SITE, designated SEQ ID:7311, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35567] Another function of GAM281 is therefore inhibition of NOSIP (Accession NP_057037.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NOSIP.

[35568] Notch homolog 2 (drosophila) (NOTCH2, Accession NP_077719.2) is another GAM281 target gene, herein designated TARGET GENE. NOTCH2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NOTCH2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NOTCH2 BINDING SITE, designated SEQ ID:18893, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35569] Another function of GAM281 is therefore inhibition of Notch homolog 2 (drosophila) (NOTCH2, Accession

NP_077719.2), a gene which is moderately similar to a region of murine Notch1 and contains an ankyrin repeat. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NOTCH2.

[35570] The function of NOTCH2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Nucleoside phosphorylase (NP, Accession NP_000261.1) is another GAM281 target gene, herein designated TARGET GENE. NP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NP BINDING SITE, designated SEQ ID:13473, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35571] Another function of GAM281 is therefore inhibition of Nucleoside phosphorylase (NP, Accession NP_000261.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NP.

[35572] NPCR (Accession NP_660361.1) is another GAM281 target gene, herein designated TARGET GENE. NPCR BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NPCR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NPCR BINDING SITE, designated SEQ ID:5959, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35573] Another function of GAM281 is therefore inhibition of NPCR (Accession NP_660361.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NPCR.

[35574] Neuronal pentraxin receptor (NPTXR, Accession NP_055108.2) is another GAM281 target gene, herein designated TARGET GENE. NPTXR BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NPTXR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NPTXR BINDING SITE, designated SEQ ID:5189, to the nu-

cleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35575] Another function of GAM281 is therefore inhibition of Neuronal pentraxin receptor (NPTXR, Accession NP_055108.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NPTXR.

[35576] Neuronal pentraxin receptor (NPTXR, Accession NP_478058.1) is another GAM281 target gene, herein designated TARGET GENE. NPTXR BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NPTXR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NPTXR BINDING SITE, designated SEQ ID:5189, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35577] Another function of GAM281 is therefore inhibition of Neuronal pentraxin receptor (NPTXR, Accession NP_478058.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NPTXR.

[35578] Nad(p)h dehydrogenase, quinone 1 (NQO1, Accession NP_000894.1) is another GAM281 target gene, herein designated TARGET GENE. NQO1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NQO1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NQO1 BINDING SITE, designated SEQ ID:14855, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35579] Another function of GAM281 is therefore inhibition of Nad(p)h dehydrogenase, quinone 1 (NQO1, Accession NP_000894.1), a gene which is cytochrome b5 reductase which reduces redox dyes and quinones. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NQO1.

[35580] The function of NQO1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Nuclear receptor subfamily 2, group e, member 1 (NR2E1, Accession NP_003260.1) is another

GAM281 target gene, herein designated TARGET GENE. NR2E1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NR2E1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NR2E1 BINDING SITE, designated SEQ ID:13178, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35581] Another function of GAM281 is therefore inhibition of Nuclear receptor subfamily 2, group e, member 1 (NR2E1, Accession NP_003260.1), a gene which may be required for brain development and be involved in the regulation of retinal development . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NR2E1.

[35582] The function of NR2E1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.NRLN1 (Accession NP_660277.1) is another GAM281 target gene, herein designated TARGET GENE. NRLN1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NRLN1, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NRLN1 BINDING SITE, designated SEQ ID:15825, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35583] Another function of GAM281 is therefore inhibition of NRLN1 (Accession NP_660277.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NRLN1.

[35584] 5'-nucleotidase, cytosolic ii (NT5C2, Accession NP_036361.1) is another GAM281 target gene, herein designated TARGET GENE. NT5C2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NT5C2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NT5C2 BINDING SITE, designated SEQ ID:4030, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35585] Another function of GAM281 is therefore inhibition of 5'-nucleotidase, cytosolic ii (NT5C2, Accession NP_036361.1) . Accordingly, utilities of GAM281 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with NT5C2.

[35586] Nudix (nucleoside diphosphate linked moiety x)-type motif 4 (NUDT4, Accession NP_061967.2) is another GAM281 target gene, herein designated TARGET GENE. NUDT4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NUDT4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NUDT4 BINDING SITE, designated SEQ ID:18879, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35587] Another function of GAM281 is therefore inhibition of Nudix (nucleoside diphosphate linked moiety x)-type motif 4 (NUDT4, Accession NP_061967.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NUDT4.

[35588] NUP43 (Accession NP_078923.2) is another GAM281 target gene, herein designated TARGET GENE. NUP43 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NUP43, corresponding

to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NUP43 BINDING SITE, designated SEQ ID:1900, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35589] Another function of GAM281 is therefore inhibition of NUP43 (Accession NP_078923.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NUP43.

[35590] Nucleoredoxin (NXN, Accession NP_071908.1) is another GAM281 target gene, herein designated TARGET GENE. NXN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NXN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NXN BINDING SITE, designated SEQ ID:935, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35591] Another function of GAM281 is therefore inhibition of Nucleoredoxin (NXN, Accession NP_071908.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with NXN.

[35592] Olfactory receptor, family 51, subfamily e, member 2 (OR51E2, Accession NP_110401.1) is another GAM281 target gene, herein designated TARGET GENE. OR51E2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OR51E2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OR51E2 BINDING SITE, designated SEQ ID:4096, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35593] Another function of GAM281 is therefore inhibition of Olfactory receptor, family 51, subfamily e, member 2 (OR51E2, Accession NP_110401.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OR51E2.

[35594] Origin recognition complex, subunit 1-like (yeast) (ORC1L, Accession NP_004144.1) is another GAM281 target gene, herein designated TARGET GENE. ORC1L BINDING SITE is a target binding site found in the 3` untrans-

lated region of mRNA encoded by ORC1L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ORC1L BINDING SITE, designated SEQ ID:17969, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35595] Another function of GAM281 is therefore inhibition of Origin recognition complex, subunit 1-like (yeast) (ORC1L, Accession NP_004144.1), a gene which may be required for initiation of DNA replication. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ORC1L.

[35596] The function of ORC1L and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Oxysterol binding protein-like 2 (OSBPL2, Accession NP_055650.1) is another GAM281 target gene, herein designated TARGET GENE. OSBPL2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by OSBPL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of OSBPL2 BINDING SITE, designated SEQ ID:7553, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35597] Another function of GAM281 is therefore inhibition of Oxysterol binding protein-like 2 (OSBPL2, Accession NP_055650.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL2.

[35598] Oxysterol binding protein-like 2 (OSBPL2, Accession NP_653081.1) is another GAM281 target gene, herein designated TARGET GENE. OSBPL2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by OSBPL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OSBPL2 BINDING SITE, designated SEQ ID:7553, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35599] Another function of GAM281 is therefore inhibition of Oxysterol binding protein-like 2 (OSBPL2, Accession NP_653081.1) . Accordingly, utilities of GAM281 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with OSBPL2.

[35600] Otoancorin (OTOA, Accession NP_733764.1) is another GAM281 target gene, herein designated TARGET GENE. OTOA BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by OTOA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OTOA BINDING SITE, designated SEQ ID:18386, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35601] Another function of GAM281 is therefore inhibition of Otoancorin (OTOA, Accession NP_733764.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OTOA.

[35602] P24B (Accession NP_031390.1) is another GAM281 target gene, herein designated TARGET GENE. P24B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by P24B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P24B BINDING SITE, designated SEQ ID:2381, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35603] Another function of GAM281 is therefore inhibition of P24B (Accession NP_031390.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P24B.

[35604] Purinergic receptor p2x, ligand-gated ion channel, 7 (P2RX7, Accession NP_803176.1) is another GAM281 target gene, herein designated TARGET GENE. P2RX7 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by P2RX7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P2RX7 BINDING SITE, designated SEQ ID:7388, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35605] Another function of GAM281 is therefore inhibition of Purinergic receptor p2x, ligand-gated ion channel, 7 (P2RX7, Accession NP_803176.1), a gene which responsi-

ble for atp- dependent lysis of macrophages and therefore may be associated with Chronic lymphatic leukemia. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Chronic lymphatic leukemia, and of other diseases and clinical conditions associated with P2RX7.

[35606] The function of P2RX7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Purinergic receptor p2x, ligand-gated ion channel, 7 (P2RX7, Accession NP_002553.2) is another GAM281 target gene, herein designated TARGET GENE. P2RX7 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by P2RX7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P2RX7 BINDING SITE, designated SEQ ID:7388, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35607] Another function of GAM281 is therefore inhibition of Purinergic receptor p2x, ligand-gated ion channel, 7 (P2RX7, Accession NP_002553.2), a gene which responsi-

ble for atp- dependent lysis of macrophages and therefore may be associated with Chronic lymphatic leukemia. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Chronic lymphatic leukemia, and of other diseases and clinical conditions associated with P2RX7.

[35608] The function of P2RX7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Purinergic receptor p2x-like 1, orphan receptor (P2RXL1, Accession NP_005437.1) is another GAM281 target gene, herein designated TARGET GENE. P2RXL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by P2RXL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P2RXL1 BINDING SITE, designated SEQ ID:4425, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35609] Another function of GAM281 is therefore inhibition of Purinergic receptor p2x-like 1, orphan receptor (P2RXL1, Accession NP_005437.1) . Accordingly, utilities of

GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P2RXL1.

[35610] P450RAI-2 (Accession NP_063938.1) is another GAM281 target gene, herein designated TARGET GENE. P450RAI-2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by P450RAI-2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P450RAI-2 BINDING SITE, designated SEQ ID:18160, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35611] Another function of GAM281 is therefore inhibition of P450RAI-2 (Accession NP_063938.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P450RAI-2.

[35612] Phosphoribosylaminoimidazole carboxylase, phosphoribosylaminoimidazole succinocarboxamide synthetase (PAICS, Accession NP_006443.1) is another GAM281 target gene, herein designated TARGET GENE. PAICS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PAICS, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PAICS BINDING SITE, designated SEQ ID:16852, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35613] Another function of GAM281 is therefore inhibition of Phosphoribosylaminoimidazole carboxylase, phosphoribosylaminoimidazole succinocarboxamide synthetase (PAICS, Accession NP_006443.1), a gene which is required for purine biosynthesis. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PAICS.

[35614] The function of PAICS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM96.1.Pas domain containing serine/threonine kinase (PASK, Accession NP_055963.1) is another GAM281 target gene, herein designated TARGET GENE. PASK BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PASK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the com-

plementarity of the nucleotide sequences of PASK BINDING SITE, designated SEQ ID:2769, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35615] Another function of GAM281 is therefore inhibition of Pas domain containing serine/threonine kinase (PASK, Accession NP_055963.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PASK.

[35616] Protocadherin alpha 9 (PCDHA9, Accession NP_054724.1) is another GAM281 target gene, herein designated TARGET GENE. PCDHA9 BINDING SITE1 and PCDHA9 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by PCDHA9, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHA9 BINDING SITE1 and PCDHA9 BINDING SITE2, designated SEQ ID:16048 and SEQ ID:10427 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35617] Another function of GAM281 is therefore inhibition of

Protocadherin alpha 9 (PCDHA9, Accession NP_054724.1), a gene which is a calcium- dependent cell- adhesion protein. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHA9.

[35618] The function of PCDHA9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Protocadherin beta 11 (PCDHB11, Accession NP_061754.1) is another GAM281 target gene, herein designated TARGET GENE. PCDHB11 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHB11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHB11 BINDING SITE, designated SEQ ID:10723, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35619] Another function of GAM281 is therefore inhibition of Protocadherin beta 11 (PCDHB11, Accession NP_061754.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with PCDHB11.

[35620] Protocadherin beta 16 (PCDHB16, Accession NP_066008.1) is another GAM281 target gene, herein designated TARGET GENE. PCDHB16 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHB16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHB16 BINDING SITE, designated SEQ ID:4617, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35621] Another function of GAM281 is therefore inhibition of Protocadherin beta 16 (PCDHB16, Accession NP_066008.1), a gene which is a potential calcium- dependent cell- adhesion protein. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHB16.

[35622] The function of PCDHB16 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Protocadherin beta 9 (PCDHB9, Accession NP_061992.2) is another GAM281 target gene, herein

designated TARGET GENE. PCDHB9 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PCDHB9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PCDHB9 BINDING SITE, designated SEQ ID:11523, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35623] Another function of GAM281 is therefore inhibition of Protocadherin beta 9 (PCDHB9, Accession NP_061992.2), a gene which is a potential calcium- dependent cell- adhesion protein. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PCDHB9.

[35624] The function of PCDHB9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Phosducin-like (PDCL, Accession NP_005379.2) is another GAM281 target gene, herein designated TARGET GENE. PDCL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PDCL, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDCL BINDING SITE, designated SEQ ID:4627, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35625] Another function of GAM281 is therefore inhibition of Phosducin-like (PDCL, Accession NP_005379.2), a gene which may regulate G- protein signaling and similar to phosducins. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDCL.

[35626] The function of PDCL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Phosphodiesterase 6b, cgmp-specific, rod, beta (congenital stationary night blindness 3, autosomal dominant) (PDE6B, Accession NP_000274.1) is another GAM281 target gene, herein designated TARGET GENE. PDE6B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PDE6B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of PDE6B BINDING SITE, designated SEQ ID:936, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35627] Another function of GAM281 is therefore inhibition of Phosphodiesterase 6b, cgmp-specific, rod, beta (congenital stationary night blindness 3, autosomal dominant) (PDE6B, Accession NP_000274.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDE6B.

[35628] Platelet derived growth factor c (PDGFC, Accession NP_057289.1) is another GAM281 target gene, herein designated TARGET GENE. PDGFC BINDING SITE1 through PDGFC BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PDGFC, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDGFC BINDING SITE1 through PDGFC BINDING SITE3, designated SEQ ID:12574, SEQ ID:7486 and SEQ ID:905 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35629] Another function of GAM281 is therefore inhibition of

Platelet derived growth factor c (PDGFC, Accession NP_057289.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDGFC.

[35630] Pdz and lim domain 2 (mystique) (PDLIM2, Accession NP_789847.1) is another GAM281 target gene, herein designated TARGET GENE. PDLIM2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PDLIM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDLIM2 BINDING SITE, designated SEQ ID:14973, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35631] Another function of GAM281 is therefore inhibition of Pdz and lim domain 2 (mystique) (PDLIM2, Accession NP_789847.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDLIM2.

[35632] Pdz domain containing 1 (PDZK1, Accession NP_002605.2) is another GAM281 target gene, herein designated TARGET GENE. PDZK1 BINDING SITE is a target

binding site found in the 5` untranslated region of mRNA encoded by PDZK1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDZK1 BINDING SITE, designated SEQ ID:4194, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35633] Another function of GAM281 is therefore inhibition of Pdz domain containing 1 (PDZK1, Accession NP_002605.2), a gene which is a contains PDZ interaction domains, interacts with MAP17, a protein involved in control of cell proliferation. and therefore may be associated with Autosomal dominant hypophosphatemic rickets. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Autosomal dominant hypophosphatemic rickets, and of other diseases and clinical conditions associated with PDZK1.

[35634] The function of PDZK1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.PDZRN1 (Accession NP_699202.1) is another GAM281 target gene, herein designated TARGET GENE. PDZRN1 BINDING SITE is a target binding site found in the

3` untranslated region of mRNA encoded by PDZRN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PDZRN1 BINDING SITE, designated SEQ ID:5270, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35635] Another function of GAM281 is therefore inhibition of PDZRN1 (Accession NP_699202.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PDZRN1.

[35636] Pellino homolog 1 (drosophila) (PELI1, Accession NP_065702.2) is another GAM281 target gene, herein designated TARGET GENE. PELI1 BINDING SITE1 through PELI1 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by PELI1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PELI1 BINDING SITE1 through PELI1 BINDING SITE3, designated SEQ ID:5491, SEQ ID:7382 and SEQ ID:14861 respectively, to the nucleotide sequence of GAM281 RNA,

herein designated GAM RNA, also designated SEQ ID:278.

[35637] Another function of GAM281 is therefore inhibition of Pellino homolog 1 (drosophila) (PELI1, Accession NP_065702.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PELI1.

[35638] PEPP3 (Accession NP_055750.1) is another GAM281 target gene, herein designated TARGET GENE. PEPP3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PEPP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PEPP3 BINDING SITE, designated SEQ ID:5136, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35639] Another function of GAM281 is therefore inhibition of PEPP3 (Accession NP_055750.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PEPP3.

[35640] Period homolog 2 (drosophila) (PER2, Accession NP_073728.1) is another GAM281 target gene, herein designated TARGET GENE. PER2 BINDING SITE is a target

binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PER2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PER2 BINDING SITE, designated SEQ ID:19703, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35641] Another function of GAM281 is therefore inhibition of Period homolog 2 (drosophila) (PER2, Accession NP_073728.1), a gene which Period homolog 2; putative circadian clock protein; has a PAS dimerization domain and therefore may be associated with Familial advanced sleep- phase syndrome. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Familial advanced sleep- phase syndrome, and of other diseases and clinical conditions associated with PER2.

[35642] The function of PER2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Phosphoribosylformylglycinamidine synthase (fgar amidotransferase) (PFAS, Accession NP_036525.1) is another GAM281 target gene, herein

designated TARGET GENE. PFAS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PFAS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PFAS BINDING SITE, designated SEQ ID:16261, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35643] Another function of GAM281 is therefore inhibition of Phosphoribosylformylglycinamidine synthase (fgar amidotransferase) (PFAS, Accession NP_036525.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PFAS.

[35644] PHAX (Accession NP_115553.1) is another GAM281 target gene, herein designated TARGET GENE. PHAX BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PHAX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PHAX BINDING SITE, designated SEQ ID:12159, to the nucleotide se-

quence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35645] Another function of GAM281 is therefore inhibition of PHAX (Accession NP_115553.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PHAX.

[35646] Phd finger protein 1 (PHF1, Accession NP_002627.1) is another GAM281 target gene, herein designated TARGET GENE. PHF1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PHF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PHF1 BINDING SITE, designated SEQ ID:5036, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35647] Another function of GAM281 is therefore inhibition of Phd finger protein 1 (PHF1, Accession NP_002627.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PHF1.

[35648] Phd finger protein 1 (PHF1, Accession NP_077084.1) is

another GAM281 target gene, herein designated TARGET GENE. PHF1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PHF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PHF1 BINDING SITE, designated SEQ ID:5036, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35649] Another function of GAM281 is therefore inhibition of Phd finger protein 1 (PHF1, Accession NP_077084.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PHF1.

[35650] Polymeric immunoglobulin receptor (PIGR, Accession NP_002635.2) is another GAM281 target gene, herein designated TARGET GENE. PIGR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PIGR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PIGR BINDING SITE, designated

SEQ ID:11059, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35651] Another function of GAM281 is therefore inhibition of Polymeric immunoglobulin receptor (PIGR, Accession NP_002635.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIGR.

[35652] Phosphoinositide-3-kinase, class 2, beta polypeptide (PIK3C2B, Accession NP_002637.2) is another GAM281 target gene, herein designated TARGET GENE. PIK3C2B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PIK3C2B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PIK3C2B BINDING SITE, designated SEQ ID:10488, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35653] Another function of GAM281 is therefore inhibition of Phosphoinositide-3-kinase, class 2, beta polypeptide (PIK3C2B, Accession NP_002637.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with PIK3C2B.

[35654] Phosphoinositide-3-kinase, catalytic, delta polypeptide (PIK3CD, Accession NP_005017.2) is another GAM281 target gene, herein designated TARGET GENE. PIK3CD BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PIK3CD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PIK3CD BINDING SITE, designated SEQ ID:9545, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35655] Another function of GAM281 is therefore inhibition of Phosphoinositide-3-kinase, catalytic, delta polypeptide (PIK3CD, Accession NP_005017.2), a gene which regulating cell growth. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIK3CD.

[35656] The function of PIK3CD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Pbx/knotted 1 homeobox 1 (PKNOX1, Ac-

cession NP_004562.2) is another GAM281 target gene, herein designated TARGET GENE. PKNOX1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PKNOX1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PKNOX1 BINDING SITE, designated SEQ ID:8826, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35657] Another function of GAM281 is therefore inhibition of Pbx/knotted 1 homeobox 1 (PKNOX1, Accession NP_004562.2), a gene which may regulate gene expression and control cell differentiation. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PKNOX1.

[35658] The function of PKNOX1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.1.Pro-melanin-concentrating hormone-like 1 (PMCHL1, Accession NP_114093.1) is another GAM281 target gene, herein designated TARGET GENE. PMCHL1

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PMCHL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PMCHL1 BINDING SITE, designated SEQ ID:16917, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35659] Another function of GAM281 is therefore inhibition of Pro-melanin-concentrating hormone-like 1 (PMCHL1, Accession NP_114093.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PMCHL1.

[35660] Pro-melanin-concentrating hormone-like 2 (PMCHL2, Accession NP_114094.1) is another GAM281 target gene, herein designated TARGET GENE. PMCHL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PMCHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PMCHL2 BINDING SITE, designated SEQ ID:16917, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA,

also designated SEQ ID:278.

[35661] Another function of GAM281 is therefore inhibition of Pro-melanin-concentrating hormone-like 2 (PMCHL2, Accession NP_114094.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PMCHL2.

[35662] PMPCA (Accession NP_055975.1) is another GAM281 target gene, herein designated TARGET GENE. PMPCA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PMPCA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PMPCA BINDING SITE, designated SEQ ID:7640, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35663] Another function of GAM281 is therefore inhibition of PMPCA (Accession NP_055975.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PMPCA.

[35664] Paraneoplastic antigen ma2 (PNMA2, Accession NP_009188.1) is another GAM281 target gene, herein designated TARGET GENE. PNMA2 BINDING SITE1 and

PNMA2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PNMA2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PNMA2 BINDING SITE1 and PNMA2 BINDING SITE2, designated SEQ ID:8006 and SEQ ID:17067 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35665] Another function of GAM281 is therefore inhibition of Paraneoplastic antigen ma2 (PNMA2, Accession NP_009188.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PNMA2.

[35666] Protein o-fucosyltransferase 1 (POFUT1, Accession NP_056167.1) is another GAM281 target gene, herein designated TARGET GENE. POFUT1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by POFUT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POFUT1 BINDING SITE, designated SEQ ID:11287, to the

nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35667] Another function of GAM281 is therefore inhibition of Protein o-fucosyltransferase 1 (POFUT1, Accession NP_056167.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POFUT1.

[35668] Polymerase (dna directed), epsilon 3 (p17 subunit) (POLE3, Accession NP_059139.2) is another GAM281 target gene, herein designated TARGET GENE. POLE3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by POLE3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POLE3 BINDING SITE, designated SEQ ID:6151, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35669] Another function of GAM281 is therefore inhibition of Polymerase (dna directed), epsilon 3 (p17 subunit) (POLE3, Accession NP_059139.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POLE3.

[35670] Polymerase (rna) ii (dna directed) polypeptide d (POLR2D, Accession NP_004796.1) is another GAM281 target gene, herein designated TARGET GENE. POLR2D BINDING SITE1 and POLR2D BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by POLR2D, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POLR2D BINDING SITE1 and POLR2D BINDING SITE2, designated SEQ ID:2798 and SEQ ID:5412 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35671] Another function of GAM281 is therefore inhibition of Polymerase (rna) ii (dna directed) polypeptide d (POLR2D, Accession NP_004796.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POLR2D.

[35672] Paraoxonase 1 (PON1, Accession NP_000437.3) is another GAM281 target gene, herein designated TARGET GENE. PON1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PON1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of PON1 BINDING SITE, designated SEQ ID:2152, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35673] Another function of GAM281 is therefore inhibition of Paraoxonase 1 (PON1, Accession NP_000437.3), a gene which hydrolyzes the toxic metabolites of a variety of organophosphorus insecticides. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PON1.

[35674] The function of PON1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Pou domain, class 2, associating factor 1 (POU2AF1, Accession NP_006226.1) is another GAM281 target gene, herein designated TARGET GENE. POU2AF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by POU2AF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POU2AF1 BINDING SITE, designated SEQ ID:20135, to the nucleotide sequence of GAM281 RNA, herein designated

GAM RNA, also designated SEQ ID:278.

[35675] Another function of GAM281 is therefore inhibition of Pou domain, class 2, associating factor 1 (POU2AF1, Accession NP_006226.1), a gene which is a transcriptional coactivator that specifically associates with either oct1 or oct2 and therefore may be associated with A form of b- cell leukemia. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of A form of b- cell leukemia, and of other diseases and clinical conditions associated with POU2AF1.

[35676] The function of POU2AF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Pou domain, class 2, transcription factor 3 (POU2F3, Accession NP_055167.1) is another GAM281 target gene, herein designated TARGET GENE. POU2F3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by POU2F3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POU2F3 BINDING SITE, designated SEQ ID:16114, to the nucleotide sequence of GAM281 RNA, herein designated

GAM RNA, also designated SEQ ID:278.

[35677] Another function of GAM281 is therefore inhibition of Pou domain, class 2, transcription factor 3 (POU2F3, Accession NP_055167.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POU2F3.

[35678] Pou domain, class 3, transcription factor 1 (POU3F1, Accession NP_002690.2) is another GAM281 target gene, herein designated TARGET GENE. POU3F1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by POU3F1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POU3F1 BINDING SITE, designated SEQ ID:7918, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35679] Another function of GAM281 is therefore inhibition of Pou domain, class 3, transcription factor 1 (POU3F1, Accession NP_002690.2), a gene which involves in early embryogenesis and neurogenesis. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POU3F1.

[35680] The function of POU3F1 has been established by previous studies. The vertebrate class III POU transcription factors consist of 4 members: POU3F1 (Oct- 6), POU3F2 (OMIM Ref. No. 600494), POU3F3 (Brain- 1), and POU3F4 (Brain-4; 300039). The chromosomal locations of the murine class III POU genes were determined by interspecific back-cross analysis (Avraham et al., 1993; Xia et al., 1993). On the basis of mouse- human chromosomal homologies, human POU3F1 and POU3F3 were expected to map to 1p and 2q, respectively. Sumiyama et al. (1998) found that the location of POU3F1 was consistent with this position, mapping to 1p34.1 by FISH. Contrary to the prediction, however, POU3F3 was mapped to 3p14.2 by the same method. The human POU3F2 and POU3F4 genes map to 6q16 and Xq21.1, respectively. Thus, the 4 human class III POU genes map to different chromosomes. A phylogenetic tree of these 4 genes shows that they emerged in a common ancestor of vertebrates. Studies of the genome structure of vertebrates suggest that genome duplication occurred at least twice in the early stage of vertebrate evolution; 4 homologous complexes such as Hox and MHC are interspersed in the mammalian genome. The findings with the 4 class III POU genes are consistent with

the idea of 2 genome duplications. Xia et al. (1993) mapped the mouse homolog of the POU3F1 gene, called Tst1 by them, to chromosome 4. Most mice homozygous for a mutant Pou3f1 die soon after birth (Bermingham et al., 1996; Jaegle et al., 1996).

[35681]

[35682] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[35683] Sumiyama, K.; Washio- Watanabe, K.; Ono, T.; Yoshida, M. C.; Hayakawa, T.; Ueda, S. : Human class III POU genes, POU3F1 and POU3F3, map to chromosomes 1p34.1 and 3p14.1. Mammalian Genome 9: 180- 181, 1998. ; and

[35684] Xia, Y.- R.; Andersen, B.; Mehrabian, M.; Diep, A. T.; War- den, C. H.; Mohandas, T.; McEvilly, R. J.; Rosenfeld, M. G.; Lusis, A. J. : Chromosomal organization of mammalian POU domain facto.

[35685] Further studies establishing the function and utilities of POU3F1 are found in John Hopkins OMIM database record ID 602479, and in cited publications listed in Table 5, which are hereby incorporated by reference.PP1628 (Accession NP_079477.1) is another GAM281 target gene, herein designated TARGET GENE. PP1628 BINDING SITE is

a target binding site found in the 5` untranslated region of mRNA encoded by PP1628, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PP1628 BINDING SITE, designated SEQ ID:10180, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35686] Another function of GAM281 is therefore inhibition of PP1628 (Accession NP_079477.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PP1628.

[35687] PP3111 (Accession NP_071439.2) is another GAM281 target gene, herein designated TARGET GENE. PP3111 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PP3111, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PP3111 BINDING SITE, designated SEQ ID:10883, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35688] Another function of GAM281 is therefore inhibition of PP3111 (Accession NP_071439.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PP3111.

[35689] PP3856 (Accession NP_660202.1) is another GAM281 target gene, herein designated TARGET GENE. PP3856 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PP3856, corresponding to a target binding site such as BINDING SITE I, BINDING

SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PP3856 BINDING SITE, designated SEQ ID:10744, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35690] Another function of GAM281 is therefore inhibition of PP3856 (Accession NP_660202.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PP3856.

[35691] Phosphatidic acid phosphatase type 2c (PPAP2C, Accession NP_803545.1) is another GAM281 target gene, herein designated TARGET GENE. PPAP2C BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PPAP2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPAP2C BINDING SITE, designated SEQ ID:7299, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35692] Another function of GAM281 is therefore inhibition of Phosphatidic acid phosphatase type 2c (PPAP2C, Accession NP_803545.1) . Accordingly, utilities of GAM281 in-

clude diagnosis, prevention and treatment of diseases and clinical conditions associated with PPAP2C.

[35693] Phosphatidic acid phosphatase type 2c (PPAP2C, Accession NP_808211.1) is another GAM281 target gene, herein designated TARGET GENE. PPAP2C BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PPAP2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPAP2C BINDING SITE, designated SEQ ID:7299, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35694] Another function of GAM281 is therefore inhibition of Phosphatidic acid phosphatase type 2c (PPAP2C, Accession NP_808211.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPAP2C.

[35695] Phosphatidic acid phosphatase type 2c (PPAP2C, Accession NP_003703.1) is another GAM281 target gene, herein designated TARGET GENE. PPAP2C BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PPAP2C, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPAP2C BINDING SITE, designated SEQ ID:7299, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35696] Another function of GAM281 is therefore inhibition of Phosphatidic acid phosphatase type 2c (PPAP2C, Accession NP_003703.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPAP2C.

[35697] Protein phosphatase, ef hand calcium-binding domain 2 (PPEF2, Accession NP_690911.1) is another GAM281 target gene, herein designated TARGET GENE. PPEF2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PPEF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPEF2 BINDING SITE, designated SEQ ID:2954, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35698] Another function of GAM281 is therefore inhibition of

Protein phosphatase, ef hand calcium-binding domain 2 (PPEF2, Accession NP_690911.1), a gene which is a homolog of Drosophila rdgC. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPEF2.

[35699] The function of PPEF2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.2.Protein phosphatase, ef hand calcium-binding domain 2 (PPEF2, Accession NP_006230.2) is another GAM281 target gene, herein designated TARGET GENE. PPEF2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PPEF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPEF2 BINDING SITE, designated SEQ ID:2954, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35700] Another function of GAM281 is therefore inhibition of Protein phosphatase, ef hand calcium-binding domain 2 (PPEF2, Accession NP_006230.2), a gene which is a homolog of Drosophila rdgC. Accordingly, utilities of

GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPEF2.

[35701] The function of PPEF2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.2.Protein phosphatase, ef hand calcium-binding domain 2 (PPEF2, Accession NP_690910.1) is another GAM281 target gene, herein designated TARGET GENE. PPEF2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PPEF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPEF2 BINDING SITE, designated SEQ ID:2954, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35702] Another function of GAM281 is therefore inhibition of Protein phosphatase, ef hand calcium-binding domain 2 (PPEF2, Accession NP_690910.1), a gene which is a homolog of Drosophila rdgC. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPEF2.

[35703] The function of PPEF2 and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.2.Ptprf interacting protein, binding protein 1 (liprin beta 1) (PPFIBP1, Accession NP_003613.2) is another GAM281 target gene, herein designated TARGET GENE. PPFIBP1 BINDING SITE1 through PPFIBP1 BINDING SITE3 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by PPFIBP1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPFIBP1 BINDING SITE1 through PPFIBP1 BINDING SITE3, designated SEQ ID:12217, SEQ ID:10708 and SEQ ID:8231 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35704] Another function of GAM281 is therefore inhibition of Ptprf interacting protein, binding protein 1 (liprin beta 1) (PPFIBP1, Accession NP_003613.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPFIBP1.

[35705] Peptidylprolyl isomerase d (cyclophilin d) (PPID, Accession

NP_005029.1) is another GAM281 target gene, herein designated TARGET GENE. PPID BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PPID, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPID BINDING SITE, designated SEQ ID:7378, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35706] Another function of GAM281 is therefore inhibition of Peptidylprolyl isomerase d (cyclophilin d) (PPID, Accession NP_005029.1), a gene which catalyzes the cis- trans isomerization of proline imidic peptide bonds in oligopeptides. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPID.

[35707] The function of PPID and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Peptidylprolyl isomerase (cyclophilin)-like 2 (PPIL2, Accession NP_055152.1) is another GAM281 target gene, herein designated TARGET GENE. PPIL2 BINDING SITE is a target binding site found in the 3` untranslated

region of multiple transcripts of mRNA encoded by PPIL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPIL2 BINDING SITE, designated SEQ ID:13122, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35708] Another function of GAM281 is therefore inhibition of Peptidylprolyl isomerase (cyclophilin)-like 2 (PPIL2, Accession NP_055152.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPIL2.

[35709] Protein phosphatase 1, regulatory (inhibitor) subunit 12b (PPP1R12B, Accession NP_002472.1) is another GAM281 target gene, herein designated TARGET GENE. PPP1R12B BINDING SITE1 and PPP1R12B BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by PPP1R12B, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPP1R12B BINDING SITE1 and PPP1R12B BINDING SITE2, designated SEQ ID:13977 and SEQ ID:3861 respectively, to the nu-

cleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35710] Another function of GAM281 is therefore inhibition of Protein phosphatase 1, regulatory (inhibitor) subunit 12b (PPP1R12B, Accession NP_002472.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP1R12B.

[35711] Protein phosphatase 1, regulatory (inhibitor) subunit 12b (PPP1R12B, Accession NP_115288.1) is another GAM281 target gene, herein designated TARGET GENE. PPP1R12B BINDING SITE1 and PPP1R12B BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by PPP1R12B, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPP1R12B BINDING SITE1 and PPP1R12B BINDING SITE2, designated SEQ ID:13977 and SEQ ID:3861 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35712] Another function of GAM281 is therefore inhibition of Protein phosphatase 1, regulatory (inhibitor) subunit 12b

(PPP1R12B, Accession NP_115288.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP1R12B.

[35713] Primase, polypeptide 2a, 58kda (PRIM2A, Accession NP_000938.1) is another GAM281 target gene, herein designated TARGET GENE. PRIM2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRIM2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRIM2A BINDING SITE, designated SEQ ID:10653, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35714] Another function of GAM281 is therefore inhibition of Primase, polypeptide 2a, 58kda (PRIM2A, Accession NP_000938.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRIM2A.

[35715] Protein kinase, interferon-inducible double stranded rna dependent (PRKR, Accession NP_002750.1) is another GAM281 target gene, herein designated TARGET GENE.

PRKR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRKR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRKR BINDING SITE, designated SEQ ID:4790, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35716] Another function of GAM281 is therefore inhibition of Protein kinase, interferon-inducible double stranded rna dependent (PRKR, Accession NP_002750.1), a gene which catalyze the phosphorylation of the alpha subunit of eif2. and therefore may be associated with Huntington's disease. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Huntington's disease, and of other diseases and clinical conditions associated with PRKR.

[35717] The function of PRKR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Protein kinase, lysine deficient 3 (PRKWNK3, Accession NP_065973.1) is another GAM281 target gene, herein designated TARGET GENE. PRKWNK3 BINDING SITE

is a target binding site found in the 3` untranslated region of mRNA encoded by PRKWNK3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRKWNK3 BINDING SITE, designated SEQ ID:14862, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35718] Another function of GAM281 is therefore inhibition of Protein kinase, lysine deficient 3 (PRKWNK3, Accession NP_065973.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRKWNK3.

[35719] Protein kinase, y-linked (PRKY, Accession NP_002751.1) is another GAM281 target gene, herein designated TARGET GENE. PRKY BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRKY, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRKY BINDING SITE, designated SEQ ID:6114, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35720] Another function of GAM281 is therefore inhibition of Protein kinase, y-linked (PRKY, Accession NP_002751.1), a gene which is a putative protein kinase. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRKY.

[35721] The function of PRKY and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Prion protein 2 (dublet) (PRND, Accession NP_036541.1) is another GAM281 target gene, herein designated TARGET GENE. PRND BINDING SITE1 and PRND BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PRND, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRND BINDING SITE1 and PRND BINDING SITE2, designated SEQ ID:4170 and SEQ ID:1539 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35722] Another function of GAM281 is therefore inhibition of Prion protein 2 (dublet) (PRND, Accession NP_036541.1), a

gene which is similar to prion protein PRNP. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRND.

[35723] The function of PRND and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM116.1.PRO0297 (Accession NP_054800.1) is another GAM281 target gene, herein designated TARGET GENE. PRO0297 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PRO0297, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO0297 BINDING SITE, designated SEQ ID:10574, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35724] Another function of GAM281 is therefore inhibition of PRO0297 (Accession NP_054800.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0297.

[35725] PRO0365 (Accession NP_054845.1) is another GAM281 target gene, herein designated TARGET GENE. PRO0365 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PRO0365, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO0365 BINDING SITE, designated SEQ ID:18148, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35726] Another function of GAM281 is therefore inhibition of PRO0365 (Accession NP_054845.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0365.

[35727] PRO0456 (Accession NP_054846.1) is another GAM281 target gene, herein designated TARGET GENE. PRO0456 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRO0456, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO0456 BINDING SITE, designated SEQ ID:9064, to the

nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35728] Another function of GAM281 is therefore inhibition of PRO0456 (Accession NP_054846.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0456.

[35729] PRO1048 (Accession NP_060967.1) is another GAM281 target gene, herein designated TARGET GENE. PRO1048 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRO1048, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO1048 BINDING SITE, designated SEQ ID:12596, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35730] Another function of GAM281 is therefore inhibition of PRO1048 (Accession NP_060967.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO1048.

[35731] PRO2730 (Accession NP_079498.1) is another GAM281

target gene, herein designated TARGET GENE. PRO2730 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRO2730, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO2730 BINDING SITE, designated SEQ ID:2048, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35732] Another function of GAM281 is therefore inhibition of PRO2730 (Accession NP_079498.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO2730.

[35733] PROM2 (Accession NP_653308.1) is another GAM281 target gene, herein designated TARGET GENE. PROM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PROM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PROM2 BINDING SITE, designated SEQ ID:2147, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA,

also designated SEQ ID:278.

[35734] Another function of GAM281 is therefore inhibition of PROM2 (Accession NP_653308.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PROM2.

[35735] Proteasome (prosome, macropain) 26s subunit, non-atpase, 9 (PSMD9, Accession NP_002804.2) is another GAM281 target gene, herein designated TARGET GENE. PSMD9 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PSMD9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSMD9 BINDING SITE, designated SEQ ID:17758, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35736] Another function of GAM281 is therefore inhibition of Proteasome (prosome, macropain) 26s subunit, non-atpase, 9 (PSMD9, Accession NP_002804.2), a gene which acts as a regulatory subunit of the 26 proteasome. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSMD9.

[35737] The function of PSMD9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Phosphoserine phosphatase (PSPH, Accession NP_004568.1) is another GAM281 target gene, herein designated TARGET GENE. PSPH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PSPH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSPH BINDING SITE, designated SEQ ID:15044, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35738] Another function of GAM281 is therefore inhibition of Phosphoserine phosphatase (PSPH, Accession NP_004568.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSPH.

[35739] Proline-serine-threonine phosphatase interacting protein 2 (PSTPIP2, Accession NP_077748.2) is another GAM281 target gene, herein designated TARGET GENE. PSTPIP2 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by PSTPIP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSTPIP2 BINDING SITE, designated SEQ ID:12057, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35740] Another function of GAM281 is therefore inhibition of Proline-serine-threonine phosphatase interacting protein 2 (PSTPIP2, Accession NP_077748.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSTPIP2.

[35741] Prostaglandin e synthase (PTGES, Accession NP_004869.1) is another GAM281 target gene, herein designated TARGET GENE. PTGES BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PTGES, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTGES BINDING SITE, designated SEQ ID:16070, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ

ID:278.

[35742] Another function of GAM281 is therefore inhibition of Prostaglandin e synthase (PTGES, Accession NP_004869.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTGES.

[35743] Prostaglandin i2 (prostacyclin) synthase (PTGIS, Accession NP_000952.1) is another GAM281 target gene, herein designated TARGET GENE. PTGIS BINDING SITE1 and PTGIS BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by PTGIS, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTGIS BINDING SITE1 and PTGIS BINDING SITE2, designated SEQ ID:17361 and SEQ ID:10783 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35744] Another function of GAM281 is therefore inhibition of Prostaglandin i2 (prostacyclin) synthase (PTGIS, Accession NP_000952.1), a gene which catalyzes the isomerization of prostaglandin h2 to prostacyclin (= prostaglandin i2). Accordingly, utilities of GAM281 include diagnosis, pre-

vention and treatment of diseases and clinical conditions associated with PTGIS.

[35745] The function of PTGIS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Ptk2 protein tyrosine kinase 2 (PTK2, Accession NP_005598.3) is another GAM281 target gene, herein designated TARGET GENE. PTK2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by PTK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTK2 BINDING SITE, designated SEQ ID:10355, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35746] Another function of GAM281 is therefore inhibition of Ptk2 protein tyrosine kinase 2 (PTK2, Accession NP_005598.3), a gene which involves in intracellular signal transduction pathway and is a putative homolog of chicken focal adhesion associated kinase. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with PTK2.

[35747] The function of PTK2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.2.Protein tyrosine phosphatase, receptor type, t (PTPRT, Accession NP_008981.2) is another GAM281 target gene, herein designated TARGET GENE. PTPRT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PTPRT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTPRT BINDING SITE, designated SEQ ID:12157, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35748] Another function of GAM281 is therefore inhibition of Protein tyrosine phosphatase, receptor type, t (PTPRT, Accession NP_008981.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTPRT.

[35749] Protein tyrosine phosphatase, receptor type, t (PTPRT, Accession NP_573400.1) is another GAM281 target gene,

herein designated TARGET GENE. PTPRT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PTPRT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTPRT BINDING SITE, designated SEQ ID:12157, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35750] Another function of GAM281 is therefore inhibition of Protein tyrosine phosphatase, receptor type, t (PTPRT, Accession NP_573400.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTPRT.

[35751] Phosphorylase, glycogen; muscle (mcardle syndrome, glycogen storage disease type v) (PYGM, Accession NP_005600.1) is another GAM281 target gene, herein designated TARGET GENE. PYGM BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PYGM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PYGM BINDING SITE, designated

SEQ ID:15938, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35752] Another function of GAM281 is therefore inhibition of Phosphorylase, glycogen; muscle (mcardle syndrome, glycogen storage disease type v) (PYGM, Accession NP_005600.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PYGM.

[35753] Peptide yy (PYY, Accession NP_004151.1) is another GAM281 target gene, herein designated TARGET GENE. PYY BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PYY, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PYY BINDING SITE, designated SEQ ID:9133, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35754] Another function of GAM281 is therefore inhibition of Peptide yy (PYY, Accession NP_004151.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with PYY.

[35755] QRSL1 (Accession NP_060762.2) is another GAM281 target gene, herein designated TARGET GENE. QRSL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by QRSL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of QRSL1 BINDING SITE, designated SEQ ID:14971, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35756] Another function of GAM281 is therefore inhibition of QRSL1 (Accession NP_060762.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with QRSL1.

[35757] RAB11-FIP4 (Accession NP_116321.2) is another GAM281 target gene, herein designated TARGET GENE. RAB11-FIP4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAB11-FIP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB11-FIP4 BINDING SITE, designated SEQ ID:13848, to

the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35758] Another function of GAM281 is therefore inhibition of RAB11-FIP4 (Accession NP_116321.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB11-FIP4.

[35759] Rab21, member ras oncogene family (RAB21, Accession NP_055814.1) is another GAM281 target gene, herein designated TARGET GENE. RAB21 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAB21, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB21 BINDING SITE, designated SEQ ID:7076, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35760] Another function of GAM281 is therefore inhibition of Rab21, member ras oncogene family (RAB21, Accession NP_055814.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB21.

[35761] Rab33b, member ras oncogene family (RAB33B, Accession

NP_112586.1) is another GAM281 target gene, herein designated TARGET GENE. RAB33B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAB33B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB33B BINDING SITE, designated SEQ ID:7910, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35762] Another function of GAM281 is therefore inhibition of Rab33b, member ras oncogene family (RAB33B, Accession NP_112586.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB33B.

[35763] Rab36, member ras oncogene family (RAB36, Accession NP_004905.1) is another GAM281 target gene, herein designated TARGET GENE. RAB36 BINDING SITE1 and RAB36 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by RAB36, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

RAB36 BINDING SITE1 and RAB36 BINDING SITE2, designated SEQ ID:808 and SEQ ID:1652 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35764] Another function of GAM281 is therefore inhibition of Rab36, member ras oncogene family (RAB36, Accession NP_004905.1), a gene which is involved in protein transport. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB36.

[35765] The function of RAB36 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Rab39, member ras oncogene family (RAB39, Accession XP_084662.1) is another GAM281 target gene, herein designated TARGET GENE. RAB39 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAB39, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB39 BINDING SITE, designated SEQ ID:3754, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA,

also designated SEQ ID:278.

[35766] Another function of GAM281 is therefore inhibition of Rab39, member ras oncogene family (RAB39, Accession XP_084662.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB39.

[35767] Rab4a, member ras oncogene family (RAB4A, Accession NP_004569.2) is another GAM281 target gene, herein designated TARGET GENE. RAB4A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RAB4A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB4A BINDING SITE, designated SEQ ID:16568, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35768] Another function of GAM281 is therefore inhibition of Rab4a, member ras oncogene family (RAB4A, Accession NP_004569.2), a gene which is involved in protein transport. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAB4A.

[35769] The function of RAB4A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.2.Rab, member of ras oncogene family-like 2a (RABL2A, Accession NP_038198.1) is another GAM281 target gene, herein designated TARGET GENE. RABL2A BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RABL2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RABL2A BINDING SITE, designated SEQ ID:2648, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35770] Another function of GAM281 is therefore inhibition of Rab, member of ras oncogene family-like 2a (RABL2A, Accession NP_038198.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RABL2A.

[35771] Rab, member of ras oncogene family-like 2b (RABL2B, Accession NP_009012.1) is another GAM281 target gene, herein designated TARGET GENE. RABL2B BINDING SITE is a target binding site found in the 3` untranslated region

of mRNA encoded by RABL2B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RABL2B BINDING SITE, designated SEQ ID:2648, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35772] Another function of GAM281 is therefore inhibition of Rab, member of ras oncogene family-like 2b (RABL2B, Accession NP_009012.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RABL2B.

[35773] RAI (Accession NP_006654.1) is another GAM281 target gene, herein designated TARGET GENE. RAI BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RAI, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAI BINDING SITE, designated SEQ ID:8937, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35774] Another function of GAM281 is therefore inhibition of RAI

(Accession NP_006654.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAI.

[35775] Retinoic acid induced 17 (RAI17, Accession NP_065071.1) is another GAM281 target gene, herein designated TARGET GENE. RAI17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RAI17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAI17 BINDING SITE, designated SEQ ID:7523, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35776] Another function of GAM281 is therefore inhibition of Retinoic acid induced 17 (RAI17, Accession NP_065071.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAI17.

[35777] Retinoic acid induced 17 (RAI17, Accession XP_166091.2) is another GAM281 target gene, herein designated TARGET GENE. RAI17 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts

of mRNA encoded by RAI17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAI17 BINDING SITE, designated SEQ ID:7523, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35778] Another function of GAM281 is therefore inhibition of Retinoic acid induced 17 (RAI17, Accession XP_166091.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAI17.

[35779] Retinoic acid induced 3 (RAI3, Accession NP_003970.1) is another GAM281 target gene, herein designated TARGET GENE. RAI3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAI3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAI3 BINDING SITE, designated SEQ ID:12784, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35780] Another function of GAM281 is therefore inhibition of

Retinoic acid induced 3 (RAI3, Accession NP_003970.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAI3.

[35781] RAP140 (Accession NP_056039.1) is another GAM281 target gene, herein designated TARGET GENE. RAP140 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAP140, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAP140 BINDING SITE, designated SEQ ID:16472, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35782] Another function of GAM281 is therefore inhibition of RAP140 (Accession NP_056039.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAP140.

[35783] Retinoic acid receptor, gamma (RARG, Accession NP_000957.1) is another GAM281 target gene, herein designated TARGET GENE. RARG BINDING SITE is a target binding site found in the 5` untranslated region of mRNA

encoded by RARG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RARG BINDING SITE, designated SEQ ID:11090, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35784] Another function of GAM281 is therefore inhibition of Retinoic acid receptor, gamma (RARG, Accession NP_000957.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RARG.

[35785] Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_739580.1) is another GAM281 target gene, herein designated TARGET GENE. RASSF2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RASSF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RASSF2 BINDING SITE, designated SEQ ID:19336, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35786] Another function of GAM281 is therefore inhibition of Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_739580.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RASSF2.

[35787] Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_739579.1) is another GAM281 target gene, herein designated TARGET GENE. RASSF2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RASSF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RASSF2 BINDING SITE, designated SEQ ID:19336, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35788] Another function of GAM281 is therefore inhibition of Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_739579.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RASSF2.

[35789] Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_055552.1) is another GAM281 target gene,

herein designated TARGET GENE. RASSF2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RASSF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RASSF2 BINDING SITE, designated SEQ ID:19336, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35790] Another function of GAM281 is therefore inhibition of Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_055552.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RASSF2.

[35791] RBAK (Accession NP_066986.1) is another GAM281 target gene, herein designated TARGET GENE. RBAK BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RBAK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RBAK BINDING SITE, designated SEQ ID:12965, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA,

also designated SEQ ID:278.

[35792] Another function of GAM281 is therefore inhibition of RBAK (Accession NP_066986.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RBAK.

[35793] Retinoblastoma binding protein 9 (RBBP9, Accession NP_006597.2) is another GAM281 target gene, herein designated TARGET GENE. RBBP9 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RBBP9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RBBP9 BINDING SITE, designated SEQ ID:16100, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35794] Another function of GAM281 is therefore inhibition of Retinoblastoma binding protein 9 (RBBP9, Accession NP_006597.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RBBP9.

[35795] RCBTB1 (Accession NP_060661.2) is another GAM281 target gene, herein designated TARGET GENE. RCBTB1 BIND-

ING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RCBTB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RCBTB1 BINDING SITE, designated SEQ ID:13829, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35796] Another function of GAM281 is therefore inhibition of RCBTB1 (Accession NP_060661.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RCBTB1.

[35797] RCD-8 (Accession NP_055144.2) is another GAM281 target gene, herein designated TARGET GENE. RCD-8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RCD-8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RCD-8 BINDING SITE, designated SEQ ID:13335, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35798] Another function of GAM281 is therefore inhibition of RCD-8 (Accession NP_055144.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RCD-8.

[35799] RDH13 (Accession NP_612421.1) is another GAM281 target gene, herein designated TARGET GENE. RDH13 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RDH13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RDH13 BINDING SITE, designated SEQ ID:9713, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35800] Another function of GAM281 is therefore inhibition of RDH13 (Accession NP_612421.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RDH13.

[35801] REC14 (Accession NP_079510.1) is another GAM281 target gene, herein designated TARGET GENE. REC14 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by REC14, corresponding to a target binding site such as BINDING SITE I, BINDING

SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of REC14 BINDING SITE, designated SEQ ID:5212, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35802] Another function of GAM281 is therefore inhibition of REC14 (Accession NP_079510.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with REC14.

[35803] Regenerating islet-derived-like, pancreatic stone protein-like, pancreatic thread protein-like (rat) (REGL, Accession NP_006499.1) is another GAM281 target gene, herein designated TARGET GENE. REGL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by REGL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of REGL BINDING SITE, designated SEQ ID:1455, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35804] Another function of GAM281 is therefore inhibition of Regenerating islet-derived-like, pancreatic stone protein-like, pancreatic thread protein-like (rat) (REGL, Accession

NP_006499.1), a gene which is a member of REG family with unknown function. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with REGL.

[35805] The function of REGL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Regulator of g-protein signalling 16 (RGS16, Accession NP_002919.1) is another GAM281 target gene, herein designated TARGET GENE. RGS16 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RGS16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RGS16 BINDING SITE, designated SEQ ID:13380, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35806] Another function of GAM281 is therefore inhibition of Regulator of g-protein signalling 16 (RGS16, Accession NP_002919.1), a gene which inhibits signal transduction. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions

associated with RGS16.

[35807] The function of RGS16 has been established by previous studies. Snow et al. (1998) found that the RGS16 gene contains 5 exons. Northern blot analysis revealed that RGS16 is expressed at high levels in retina and at lower levels in all other tissues examined. By searching for retinal- specific RGS family members that might be involved in the phototransduction cascade, Chen et al. (1996) identified cDNAs encoding the mouse and rat homologs of RGS16, called Rgs- r by them. Northern blot analysis showed that rat Rgs16 is expressed predominantly in the retina. Chen et al. (1996) found that mouse Rgs16 enhances the rate of GTP- hydrolysis by transducin (see OMIM Ref. No. GNAT2; 139340), suggesting that Rgs16 may play a role in regulating the kinetics of signaling in the phototransduction cascade. The mouse and rat Rgs16 proteins have 94% amino acid sequence identity. Snow et al. (1998) reported that the mouse and human RGS16 proteins have 86% amino acid sequence identity

[35808]

[35809] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[35810] Snow, B. E.; Antonio, L.; Suggs, S.; Siderovski, D. P. : Cloning of a retinally abundant regulator of G- protein signaling (RGS- r/RGS16): genomic structure and chromosomal localization of the human gene. Gene 206: 247-253, 1998. ; and

[35811] Chen, C.- K.; Wieland, T.; Simon, M. I. : RGS- r, a retinal specific RGS protein, binds an intermediate conformation of transducin and enhances recycling. Proc. Nat. Acad. Sci. 93: 12885- 1288.

[35812] Further studies establishing the function and utilities of RGS16 are found in John Hopkins OMIM database record ID 602514, and in cited publications listed in Table 5, which are hereby incorporated by reference.Regulator of g-protein signalling 3 (RGS3, Accession NP_570613.1) is another GAM281 target gene, herein designated TARGET GENE. RGS3 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by RGS3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RGS3 BINDING SITE, designated SEQ ID:3344, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:278.

[35813] Another function of GAM281 is therefore inhibition of Regulator of g-protein signalling 3 (RGS3, Accession NP_570613.1), a gene which negatively regulates G protein- coupled receptor signalling. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RGS3.

[35814] The function of RGS3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM146.1.Rhesus blood group, d antigen (RHD, Accession NP_057208.2) is another GAM281 target gene, herein designated TARGET GENE. RHD BINDING SITE1 and RHD BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by RHD, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RHD BINDING SITE1 and RHD BINDING SITE2, designated SEQ ID:4143 and SEQ ID:13465 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35815] Another function of GAM281 is therefore inhibition of

Rhesus blood group, d antigen (RHD, Accession NP_057208.2), a gene which Major antigen of the RH system. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RHD.

[35816] The function of RHD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM161.1.Rhesus blood group, d antigen (RHD, Accession NP_057309.2) is another GAM281 target gene, herein designated TARGET GENE. RHD BINDING SITE1 and RHD BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by RHD, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RHD BINDING SITE1 and RHD BINDING SITE2, designated SEQ ID:4143 and SEQ ID:13465 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35817] Another function of GAM281 is therefore inhibition of Rhesus blood group, d antigen (RHD, Accession NP_057309.2), a gene which Major antigen of the RH sys-

tem. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RHD.

[35818] The function of RHD and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM161.1.RHPN2 (Accession NP_149094.2) is another GAM281 target gene, herein designated TARGET GENE. RHPN2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RHPN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RHPN2 BINDING SITE, designated SEQ ID:11803, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35819] Another function of GAM281 is therefore inhibition of RHPN2 (Accession NP_149094.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RHPN2.

[35820] RNF137 (Accession NP_060543.4) is another GAM281 target gene, herein designated TARGET GENE. RNF137 BINDING SITE1 and RNF137 BINDING SITE2 are target binding

sites found in untranslated regions of mRNA encoded by RNF137, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNF137 BINDING SITE1 and RNF137 BINDING SITE2, designated SEQ ID:16940 and SEQ ID:7446 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35821] Another function of GAM281 is therefore inhibition of RNF137 (Accession NP_060543.4) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNF137.

[35822] RNF144 (Accession NP_055561.1) is another GAM281 target gene, herein designated TARGET GENE. RNF144 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RNF144, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNF144 BINDING SITE, designated SEQ ID:13909, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35823] Another function of GAM281 is therefore inhibition of RNF144 (Accession NP_055561.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNF144.

[35824] Ring finger protein (c3hc4 type) 8 (RNF8, Accession NP_003949.1) is another GAM281 target gene, herein designated TARGET GENE. RNF8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RNF8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNF8 BINDING SITE, designated SEQ ID:13778, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35825] Another function of GAM281 is therefore inhibition of Ring finger protein (c3hc4 type) 8 (RNF8, Accession NP_003949.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNF8.

[35826] Rna binding protein s1, serine-rich domain (RNPS1, Accession NP_542161.1) is another GAM281 target gene,

herein designated TARGET GENE. RNPS1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RNPS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNPS1 BINDING SITE, designated SEQ ID:1646, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35827] Another function of GAM281 is therefore inhibition of Rna binding protein s1, serine-rich domain (RNPS1, Accession NP_542161.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNPS1.

[35828] Rna binding protein s1, serine-rich domain (RNPS1, Accession NP_006702.1) is another GAM281 target gene, herein designated TARGET GENE. RNPS1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RNPS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNPS1 BINDING SITE, designated SEQ ID:1646, to the nu-

cleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35829] Another function of GAM281 is therefore inhibition of Rna binding protein s1, serine-rich domain (RNPS1, Accession NP_006702.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNPS1.

[35830] Retinitis pigmentosa 2 (x-linked recessive) (RP2, Accession NP_008846.1) is another GAM281 target gene, herein designated TARGET GENE. RP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RP2 BINDING SITE, designated SEQ ID:6582, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35831] Another function of GAM281 is therefore inhibition of Retinitis pigmentosa 2 (x-linked recessive) (RP2, Accession NP_008846.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RP2.

[35832] Rabphilin 3a-like (without c2 domains) (RPH3AL, Acces-

sion NP_008918.1) is another GAM281 target gene, herein designated TARGET GENE. RPH3AL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RPH3AL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RPH3AL BINDING SITE, designated SEQ ID:2614, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35833] Another function of GAM281 is therefore inhibition of Rabphilin 3a-like (without c2 domains) (RPH3AL, Accession NP_008918.1), a gene which is a protein transporter. could play a role in neurotransmitter release by regulating membrane flow in the nerve terminal. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RPH3AL.

[35834] The function of RPH3AL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.RPP30 (Accession NP_006404.1) is another GAM281 target gene, herein designated TARGET GENE.

RPP30 BINDING SITE1 and RPP30 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by RPP30, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RPP30 BINDING SITE1 and RPP30 BINDING SITE2, designated SEQ ID:19325 and SEQ ID:445 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35835] Another function of GAM281 is therefore inhibition of RPP30 (Accession NP_006404.1), a gene which is a component of ribonuclease p that processes 5' ends of precursor tRNAs. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RPP30.

[35836] The function of RPP30 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.RRP40 (Accession NP_057126.1) is another GAM281 target gene, herein designated TARGET GENE. RRP40 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RRP40, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RRP40 BINDING SITE, designated SEQ ID:14169, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35837] Another function of GAM281 is therefore inhibition of RRP40 (Accession NP_057126.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RRP40.

[35838] S100A15 (Accession NP_789793.1) is another GAM281 target gene, herein designated TARGET GENE. S100A15 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by S100A15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of S100A15 BINDING SITE, designated SEQ ID:19723, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35839] Another function of GAM281 is therefore inhibition of S100A15 (Accession NP_789793.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

S100A15.

[35840] SARM1 (Accession NP_055892.1) is another GAM281 target gene, herein designated TARGET GENE. SARM1 BINDING SITE1 and SARM1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SARM1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SARM1 BINDING SITE1 and SARM1 BINDING SITE2, designated SEQ ID:4282 and SEQ ID:7147 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35841] Another function of GAM281 is therefore inhibition of SARM1 (Accession NP_055892.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SARM1.

[35842] Sarcoma amplified sequence (SAS, Accession NP_005972.1) is another GAM281 target gene, herein designated TARGET GENE. SAS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SAS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of SAS BINDING SITE, designated SEQ ID:17726, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35843] Another function of GAM281 is therefore inhibition of Sarcoma amplified sequence (SAS, Accession NP_005972.1), a gene which is a member of the trans-membrane 4 superfamily (TM4SF) and may be involved in growth- related cellular processes T. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SAS.

[35844] The function of SAS and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM88.1.SBLF (Accession NP_006864.2) is another GAM281 target gene, herein designated TARGET GENE. SBLF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SBLF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SBLF BINDING SITE, designated SEQ ID:14551, to the nucleotide sequence of GAM281 RNA, herein designated

GAM RNA, also designated SEQ ID:278.

[35845] Another function of GAM281 is therefore inhibition of SBLF (Accession NP_006864.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SBLF.

[35846] SCAMP-4 (Accession NP_524558.1) is another GAM281 target gene, herein designated TARGET GENE. SCAMP-4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SCAMP-4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCAMP-4 BINDING SITE, designated SEQ ID:2153, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35847] Another function of GAM281 is therefore inhibition of SCAMP-4 (Accession NP_524558.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCAMP-4.

[35848] Scan domain containing 2 (SCAND2, Accession NP_071333.2) is another GAM281 target gene, herein designated TARGET GENE. SCAND2 BINDING SITE is a tar-

get binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SCAND2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCAND2 BINDING SITE, designated SEQ ID:7179, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35849] Another function of GAM281 is therefore inhibition of Scan domain containing 2 (SCAND2, Accession NP_071333.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCAND2.

[35850] SCAP (Accession NP_036367.1) is another GAM281 target gene, herein designated TARGET GENE. SCAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SCAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCAP BINDING SITE, designated SEQ ID:9400, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35851] Another function of GAM281 is therefore inhibition of SCAP (Accession NP_036367.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCAP.

[35852] Scavenger receptor class f, member 1 (SCARF1, Accession NP_003684.1) is another GAM281 target gene, herein designated TARGET GENE. SCARF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SCARF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCARF1 BINDING SITE, designated SEQ ID:5158, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35853] Another function of GAM281 is therefore inhibition of Scavenger receptor class f, member 1 (SCARF1, Accession NP_003684.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCARF1.

[35854] Sex comb on midleg-like 2 (drosophila) (SCML2, Accession NP_006080.1) is another GAM281 target gene, herein designated TARGET GENE. SCML2 BINDING SITE is a target

binding site found in the 3` untranslated region of mRNA encoded by SCML2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCML2 BINDING SITE, designated SEQ ID:3898, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35855] Another function of GAM281 is therefore inhibition of Sex comb on midleg-like 2 (drosophila) (SCML2, Accession NP_006080.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCML2.

[35856] SCN3B (Accession NP_060870.1) is another GAM281 target gene, herein designated TARGET GENE. SCN3B BINDING SITE1 and SCN3B BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SCN3B, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCN3B BINDING SITE1 and SCN3B BINDING SITE2, designated SEQ ID:16355 and SEQ ID:4399 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35857] Another function of GAM281 is therefore inhibition of SCN3B (Accession NP_060870.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCN3B.

[35858] SDS-RS1 (Accession NP_612441.1) is another GAM281 target gene, herein designated TARGET GENE. SDS-RS1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SDS-RS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SDS-RS1 BINDING SITE, designated SEQ ID:14127, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35859] Another function of GAM281 is therefore inhibition of SDS-RS1 (Accession NP_612441.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SDS-RS1.

[35860] Spondyloepiphyseal dysplasia, late (SEDL, Accession NP_055378.1) is another GAM281 target gene, herein designated TARGET GENE. SEDL BINDING SITE1 through SEDL BINDING SITE4 are target binding sites found in un-

translated regions of mRNA encoded by SEDL, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEDL BINDING SITE1 through SEDL BINDING SITE4, designated SEQ ID:11591, SEQ ID:16937, SEQ ID:15576 and SEQ ID:926 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35861] Another function of GAM281 is therefore inhibition of Spondyloepiphyseal dysplasia, late (SEDL, Accession NP_055378.1), a gene which may play role in vesicular transport from endoplasmic reticulum to golgi. and therefore may be associated with Spondyloepiphyseal dysplasia. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Spondyloepiphyseal dysplasia, and of other diseases and clinical conditions associated with SEDL.

[35862] The function of SEDL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.SELH (Accession NP_734467.1) is another GAM281 target gene, herein designated TARGET GENE.

SELH BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SELH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SELH BINDING SITE, designated SEQ ID:13030, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35863] Another function of GAM281 is therefore inhibition of SELH (Accession NP_734467.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SELH.

[35864] Sema domain, immunoglobulin domain (ig), short basic domain, secreted, (semaphorin) 3b (SEMA3B, Accession NP_004627.1) is another GAM281 target gene, herein designated TARGET GENE. SEMA3B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SEMA3B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEMA3B BINDING SITE, designated SEQ ID:17810, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA,

also designated SEQ ID:278.

[35865] Another function of GAM281 is therefore inhibition of Sema domain, immunoglobulin domain (ig), short basic domain, secreted, (semaphorin) 3b (SEMA3B, Accession NP_004627.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEMA3B.

[35866] Sema domain, immunoglobulin domain (ig), short basic domain, secreted, (semaphorin) 3e (SEMA3E, Accession NP_036563.1) is another GAM281 target gene, herein designated TARGET GENE. SEMA3E BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SEMA3E, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEMA3E BINDING SITE, designated SEQ ID:13353, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35867] Another function of GAM281 is therefore inhibition of Sema domain, immunoglobulin domain (ig), short basic domain, secreted, (semaphorin) 3e (SEMA3E, Accession NP_036563.1) . Accordingly, utilities of GAM281 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with SEMA3E.

[35868] Selenoprotein n, 1 (SEPN1, Accession NP_065184.1) is another GAM281 target gene, herein designated TARGET GENE. SEPN1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SEPN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEPN1 BINDING SITE, designated SEQ ID:18255, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35869] Another function of GAM281 is therefore inhibition of Selenoprotein n, 1 (SEPN1, Accession NP_065184.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEPN1.

[35870] Small edrk-rich factor 1a (telomeric) (SERF1A, Accession NP_068802.1) is another GAM281 target gene, herein designated TARGET GENE. SERF1A BINDING SITE1 and SERF1A BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SERF1A, corresponding to target binding sites such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SERF1A BINDING SITE1 and SERF1A BINDING SITE2, designated SEQ ID:9219 and SEQ ID:15849 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35871] Another function of GAM281 is therefore inhibition of Small edrk-rich factor 1a (telomeric) (SERF1A, Accession NP_068802.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SERF1A.

[35872] Small edrk-rich factor 1b (centromeric) (SERF1B, Accession NP_075267.1) is another GAM281 target gene, herein designated TARGET GENE. SERF1B BINDING SITE1 and SERF1B BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SERF1B, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SERF1B BINDING SITE1 and SERF1B BINDING SITE2, designated SEQ ID:15849 and SEQ ID:9219 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35873] Another function of GAM281 is therefore inhibition of Small edrk-rich factor 1b (centromeric) (SERF1B, Accession NP_075267.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SERF1B.

[35874] Small edrk-rich factor 2 (SERF2, Accession NP_005761.2) is another GAM281 target gene, herein designated TARGET GENE. SERF2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SERF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SERF2 BINDING SITE, designated SEQ ID:16210, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35875] Another function of GAM281 is therefore inhibition of Small edrk-rich factor 2 (SERF2, Accession NP_005761.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SERF2.

[35876] Serine (or cysteine) proteinase inhibitor, clade b (ovalbumin), member 8 (SERPINB8, Accession

NP_002631.1) is another GAM281 target gene, herein designated TARGET GENE. SERPINB8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SERPINB8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SERPINB8 BINDING SITE, designated SEQ ID:20173, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35877] Another function of GAM281 is therefore inhibition of Serine (or cysteine) proteinase inhibitor, clade b (ovalbumin), member 8 (SERPINB8, Accession NP_002631.1), a gene which protease inhibitors; may be a serpin serine protease inhibitor that binds thrombin. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SERPINB8.

[35878] The function of SERPINB8 has been established by previous studies. High molecular weight serine proteinase inhibitors (serpins) are a large superfamily of proteins which bind to and inactivate serine proteinases. These interactions are involved in many cellular processes including

coagulation, fibrinolysis, complement fixation, matrix remodeling, and apoptosis. Sprecher et al. (1995) cloned 2 novel serpins, termed PI8 and PI9 (OMIM Ref. No. 601799), from a human placenta cDNA library. Sequence analysis showed that PI8 encodes a 376- amino acid polypeptide with over 60% identity to PI6 (OMIM Ref. No. 173321). Using Northern blotting, they observed that PI8 was expressed as 2 transcripts of 1.4 and 3.8 kb. The 1.4- kb transcript was most abundant in liver and lung while the 3.8- kb transcript was most abundant in skeletal muscle and heart. They showed that PI8 was localized to the cytoplasm of transfected cells and that it was able to form an SDS- insoluble complex with human thrombin (OMIM Ref. No. 176930). Serpins are characterized by a well- conserved tertiary structure that consists of 3 beta sheets and 8 or 9 alpha helices (Huber and Carrell, 1989). A critical portion of the molecule, the reactive center loop, connects beta sheets A and C and, in most cases, serves as bait for a target serine proteinase. Bartuski et al. (1997) stated that more than 100 members of the serpin superfamily are known, including C1 esterase inhibitor (C1NH; 606860), antithrombin III (AT3; 107300), protease inhibitor 7 (PI7; 177010), and maspin (PI5; 154790), which

are involved in complement activation, coagulation, cell differentiation, and tumor suppression, respectively, as well as many others. The ovalbumin- type serpins (ov-serpins) are a subset of the serpin superfamily and are characterized by their high degree of homology to chicken ovalbumin, the lack of N- and C- terminal extensions, the absence of a signal peptide, and a serine rather than an asparagine residue at the penultimate position. Four members of the ov- serpin family had been mapped to a 300- kb region within 18q21.3: PI5, SCCA1 (OMIM Ref. No. 600517), SCCA2 (OMIM Ref. No. 600518), and PAI2 (OMIM Ref. No. 173390). Using a panel of 18q21.3 YAC clones, PCR, and DNA blotting, Bartuski et al. (1997) mapped 2 additional ov- serpins, cytoplasmic antiproteinase 2 (CAP2 or PI8) and bone marrow- associated serpin bomapin (PI10; 602058), to the same region. Three of the serpins (PI8, PI10, and PAI2) mapped to the same YACs. Bartuski et al. (1997) estimated that the size of the 18q21.3 serpin cluster spans approximately 500 kb and contains at least 6 serpin genes. The gene order is cen- - PI5- - SCCA2- - SCCA1- - PAI2- - PI10- - PI8- - tel. The characterization of the serpin gene cluster at 18q21 provided new opportunities to study coordinate gene regula-

tion and the evolution of gene families.

[35879]

[35880] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[35881] Bartuski, A. J.; Kamachi, Y.; Schick, C.; Overhauser, J.; Silverman, G. A. : Cytoplasmic antiproteinase 2 (PI8) and bomapin (PI10) map to the serpin cluster at 18q21.3. Genomics 43: 321- 328, 1997. ; and

[35882] Sprecher, C. A.; Morgenstern, K. A.; Mathewes, S.; Dahlen, J. R.; Schrader, S. K.; Foster, D. C.; Kisiel, W. : Molecular cloning, expression, and partial characterization of two novel m.

[35883] Further studies establishing the function and utilities of SERPINB8 are found in John Hopkins OMIM database record ID 601697, and in cited publications listed in Table 5, which are hereby incorporated by reference.Serine (or cysteine) proteinase inhibitor, clade b (ovalbumin), member 9 (SERPINB9, Accession NP_004146.1) is another GAM281 target gene, herein designated TARGET GENE. SERPINB9 BINDING SITE1 and SERPINB9 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SERPINB9, corresponding to target

binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SERPINB9 BINDING SITE1 and SERPINB9 BINDING SITE2, designated SEQ ID:4363 and SEQ ID:9152 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35884] Another function of GAM281 is therefore inhibition of Serine (or cysteine) proteinase inhibitor, clade b (ovalbumin), member 9 (SERPINB9, Accession NP_004146.1), a gene which may be a serpin serine protease inhibitor that interacts with granzyme B (GZMB). Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SERPINB9.

[35885] The function of SERPINB9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM88.2.Sideroflexin 2 (SFXN2, Accession NP_849189.1) is another GAM281 target gene, herein designated TARGET GENE. SFXN2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SFXN2, correspond-

ing to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SFXN2 BINDING SITE, designated SEQ ID:3678, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35886] Another function of GAM281 is therefore inhibition of Sideroflexin 2 (SFXN2, Accession NP_849189.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SFXN2.

[35887] Sideroflexin 2 (SFXN2, Accession XP_058359.2) is another GAM281 target gene, herein designated TARGET GENE. SFXN2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SFXN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SFXN2 BINDING SITE, designated SEQ ID:3678, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35888] Another function of GAM281 is therefore inhibition of Sideroflexin 2 (SFXN2, Accession XP_058359.2) . Accord-

ingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SFXN2.

[35889] Sideroflexin 5 (SFXN5, Accession NP_653180.1) is another GAM281 target gene, herein designated TARGET GENE. SFXN5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SFXN5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SFXN5 BINDING SITE, designated SEQ ID:11307, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35890] Another function of GAM281 is therefore inhibition of Sideroflexin 5 (SFXN5, Accession NP_653180.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SFXN5.

[35891] Sh3-domain binding protein 2 (SH3BP2, Accession NP_003014.2) is another GAM281 target gene, herein designated TARGET GENE. SH3BP2 BINDING SITE1 and SH3BP2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by SH3BP2, corre-

sponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SH3BP2 BINDING SITE1 and SH3BP2 BINDING SITE2, designated SEQ ID:3836 and SEQ ID:9440 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35892] Another function of GAM281 is therefore inhibition of Sh3-domain binding protein 2 (SH3BP2, Accession NP_003014.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SH3BP2.

[35893] Split hand/foot malformation (ectrodactyly) type 3 (SHFM3, Accession NP_071322.1) is another GAM281 target gene, herein designated TARGET GENE. SHFM3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SHFM3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SHFM3 BINDING SITE, designated SEQ ID:2197, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35894] Another function of GAM281 is therefore inhibition of Split hand/foot malformation (ectrodactyly) type 3 (SHFM3, Accession NP_071322.1), a gene which probably binds to some phosphorylated proteins and promotes their degradation. and therefore may be associated with Split- hand/split- foot malformation. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Split- hand/split- foot malformation, and of other diseases and clinical conditions associated with SHFM3.

[35895] The function of SHFM3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Short stature homeobox (SHOX, Accession NP_006874.1) is another GAM281 target gene, herein designated TARGET GENE. SHOX BINDING SITE1 and SHOX BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by SHOX, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SHOX BINDING SITE1 and SHOX BINDING SITE2, designated SEQ ID:4375 and SEQ ID:16527 respectively, to the nucleotide sequence of GAM281 RNA,

herein designated GAM RNA, also designated SEQ ID:278.

[35896] Another function of GAM281 is therefore inhibition of Short stature homeobox (SHOX, Accession NP_006874.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SHOX.

[35897] Sialic acid binding ig-like lectin 8 (SIGLEC8, Accession NP_055257.1) is another GAM281 target gene, herein designated TARGET GENE. SIGLEC8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SIGLEC8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIGLEC8 BINDING SITE, designated SEQ ID:4513, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35898] Another function of GAM281 is therefore inhibition of Sialic acid binding ig-like lectin 8 (SIGLEC8, Accession NP_055257.1), a gene which is a cell adhesion molecule for postnatal neural development. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIGLEC8.

[35899] The function of SIGLEC8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Tal1 (scl) interrupting locus (SIL, Accession NP_003026.1) is another GAM281 target gene, herein designated TARGET GENE. SIL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SIL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIL BINDING SITE, designated SEQ ID:12411, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35900] Another function of GAM281 is therefore inhibition of Tal1 (scl) interrupting locus (SIL, Accession NP_003026.1), a gene which may be required for axial development and left- right specification and therefore may be associated with Prominent midline neural tube defects, abnormal left- right development. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Prominent midline neural tube defects, abnormal left- right development, and of other diseases and clinical conditions associated with SIL.

[35901] The function of SIL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Signal-regulatory protein beta 1 (SIRPB1, Accession NP_006056.1) is another GAM281 target gene, herein designated TARGET GENE. SIRPB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SIRPB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIRPB1 BINDING SITE, designated SEQ ID:14771, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35902] Another function of GAM281 is therefore inhibition of Signal-regulatory protein beta 1 (SIRPB1, Accession NP_006056.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIRPB1.

[35903] Src-like-adaptor 2 (SLA2, Accession NP_778252.1) is another GAM281 target gene, herein designated TARGET GENE. SLA2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of

mRNA encoded by SLA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLA2 BINDING SITE, designated SEQ ID:19573, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35904] Another function of GAM281 is therefore inhibition of Src-like-adaptor 2 (SLA2, Accession NP_778252.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLA2.

[35905] Src-like-adaptor 2 (SLA2, Accession NP_115590.1) is another GAM281 target gene, herein designated TARGET GENE. SLA2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SLA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLA2 BINDING SITE, designated SEQ ID:19573, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35906] Another function of GAM281 is therefore inhibition of Src-like-adaptor 2 (SLA2, Accession NP_115590.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLA2.

[35907] Solute carrier family 12 (potassium/chloride transporters), member 8 (SLC12A8, Accession NP_078904.1) is another GAM281 target gene, herein designated TARGET GENE. SLC12A8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC12A8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC12A8 BINDING SITE, designated SEQ ID:5190, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35908] Another function of GAM281 is therefore inhibition of Solute carrier family 12 (potassium/chloride transporters), member 8 (SLC12A8, Accession NP_078904.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC12A8.

[35909] Solute carrier family 13 (sodium/sulfate symporters),

member 1 (SLC13A1, Accession NP_071889.2) is another GAM281 target gene, herein designated TARGET GENE. SLC13A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC13A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC13A1 BINDING SITE, designated SEQ ID:4370, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35910] Another function of GAM281 is therefore inhibition of Solute carrier family 13 (sodium/sulfate symporters), member 1 (SLC13A1, Accession NP_071889.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC13A1.

[35911] Solute carrier family 13 (sodium-dependent dicarboxylate transporter), member 3 (SLC13A3, Accession NP_073740.2) is another GAM281 target gene, herein designated TARGET GENE. SLC13A3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC13A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC13A3 BINDING SITE, designated SEQ ID:7448, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35912] Another function of GAM281 is therefore inhibition of Solute carrier family 13 (sodium-dependent dicarboxylate transporter), member 3 (SLC13A3, Accession NP_073740.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC13A3.

[35913] Solute carrier family 14 (urea transporter), member 2 (SLC14A2, Accession NP_009094.2) is another GAM281 target gene, herein designated TARGET GENE. SLC14A2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SLC14A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC14A2 BINDING SITE, designated SEQ ID:4514, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35914] Another function of GAM281 is therefore inhibition of So-

lute carrier family 14 (urea transporter), member 2 (SLC14A2, Accession NP_009094.2), a gene which is a renal urea transporter 2. and therefore may be associated with Orthostatic hypotension. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Orthostatic hypotension, and of other diseases and clinical conditions associated with SLC14A2.

[35915] The function of SLC14A2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM97.1.Solute carrier family 15 (oligopeptide transporter), member 1 (SLC15A1, Accession NP_005064.1) is another GAM281 target gene, herein designated TARGET GENE. SLC15A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC15A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC15A1 BINDING SITE, designated SEQ ID:18930, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35916] Another function of GAM281 is therefore inhibition of So-

lute carrier family 15 (oligopeptide transporter), member 1 (SLC15A1, Accession NP_005064.1), a gene which is a H(+)- coupled peptide transporter. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC15A1.

[35917] The function of SLC15A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Solute carrier family 16 (monocarboxylic acid transporters), member 4 (SLC16A4, Accession NP_004687.1) is another GAM281 target gene, herein designated TARGET GENE. SLC16A4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC16A4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC16A4 BINDING SITE, designated SEQ ID:611, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35918] Another function of GAM281 is therefore inhibition of Solute carrier family 16 (monocarboxylic acid transporters),

member 4 (SLC16A4, Accession NP_004687.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC16A4.

[35919] Solute carrier family 16 (monocarboxylic acid transporters), member 6 (SLC16A6, Accession NP_004685.1) is another GAM281 target gene, herein designated TARGET GENE. SLC16A6 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SLC16A6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC16A6 BINDING SITE, designated SEQ ID:5302, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35920] Another function of GAM281 is therefore inhibition of Solute carrier family 16 (monocarboxylic acid transporters), member 6 (SLC16A6, Accession NP_004685.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC16A6.

[35921] Solute carrier family 19, member 3 (SLC19A3, Accession NP_079519.1) is another GAM281 target gene, herein

designated TARGET GENE. SLC19A3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC19A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC19A3 BINDING SITE, designated SEQ ID:6713, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35922] Another function of GAM281 is therefore inhibition of Solute carrier family 19, member 3 (SLC19A3, Accession NP_079519.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC19A3.

[35923] Solute carrier family 1 (neutral amino acid transporter), member 5 (SLC1A5, Accession NP_005619.1) is another GAM281 target gene, herein designated TARGET GENE. SLC1A5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC1A5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC1A5 BINDING SITE, designated SEQ ID:1277, to the

nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35924] Another function of GAM281 is therefore inhibition of Solute carrier family 1 (neutral amino acid transporter), member 5 (SLC1A5, Accession NP_005619.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC1A5.

[35925] Solute carrier family 21 (prostaglandin transporter), member 2 (SLC21A2, Accession NP_005621.1) is another GAM281 target gene, herein designated TARGET GENE. SLC21A2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC21A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC21A2 BINDING SITE, designated SEQ ID:18939, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35926] Another function of GAM281 is therefore inhibition of Solute carrier family 21 (prostaglandin transporter), member 2 (SLC21A2, Accession NP_005621.1), a gene which is a Prostaglandin transporter. Accordingly, utilities of

GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC21A2.

[35927] The function of SLC21A2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM148.1.Solute carrier family 24 (sodium/potassium/calcium exchanger), member 1 (SLC24A1, Accession NP_004718.1) is another GAM281 target gene, herein designated TARGET GENE. SLC24A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC24A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC24A1 BINDING SITE, designated SEQ ID:10966, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35928] Another function of GAM281 is therefore inhibition of Solute carrier family 24 (sodium/potassium/calcium exchanger), member 1 (SLC24A1, Accession NP_004718.1), a gene which is a critical component of the visual transduction cascade, controlling the calcium concentration of outer segments during light and darkness. Accordingly,

utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC24A1.

[35929] The function of SLC24A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.SLC30A5 (Accession NP_076960.1) is another GAM281 target gene, herein designated TARGET GENE. SLC30A5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SLC30A5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC30A5 BINDING SITE, designated SEQ ID:3692, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35930] Another function of GAM281 is therefore inhibition of SLC30A5 (Accession NP_076960.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC30A5.

[35931] SLC30A6 (Accession NP_060434.2) is another GAM281

target gene, herein designated TARGET GENE. SLC30A6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC30A6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC30A6 BINDING SITE, designated SEQ ID:5362, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35932] Another function of GAM281 is therefore inhibition of SLC30A6 (Accession NP_060434.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC30A6.

[35933] SLC35E2 (Accession XP_049733.6) is another GAM281 target gene, herein designated TARGET GENE. SLC35E2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC35E2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC35E2 BINDING SITE, designated SEQ ID:13336, to the nucleotide sequence of GAM281 RNA, herein designated

GAM RNA, also designated SEQ ID:278.

[35934] Another function of GAM281 is therefore inhibition of SLC35E2 (Accession XP_049733.6) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC35E2.

[35935] Solute carrier family 39 (zinc transporter), member 1 (SLC39A1, Accession NP_055252.2) is another GAM281 target gene, herein designated TARGET GENE. SLC39A1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SLC39A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC39A1 BINDING SITE, designated SEQ ID:9528, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35936] Another function of GAM281 is therefore inhibition of Solute carrier family 39 (zinc transporter), member 1 (SLC39A1, Accession NP_055252.2), a gene which is a divalent (zinc/iron) metal ion transporter. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

SLC39A1.

[35937] The function of SLC39A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.1.Solute carrier family 39 (zinc transporter), member 3 (SLC39A3, Accession NP_653165.1) is another GAM281 target gene, herein designated TARGET GENE. SLC39A3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC39A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC39A3 BINDING SITE, designated SEQ ID:20136, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35938] Another function of GAM281 is therefore inhibition of Solute carrier family 39 (zinc transporter), member 3 (SLC39A3, Accession NP_653165.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC39A3.

[35939] Solute carrier family 6 (neurotransmitter transporter), member 14 (SLC6A14, Accession NP_009162.1) is another

GAM281 target gene, herein designated TARGET GENE. SLC6A14 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC6A14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC6A14 BINDING SITE, designated SEQ ID:13830, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35940] Another function of GAM281 is therefore inhibition of Solute carrier family 6 (neurotransmitter transporter), member 14 (SLC6A14, Accession NP_009162.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC6A14.

[35941] Solute carrier family 6 (neurotransmitter transporter, dopamine), member 3 (SLC6A3, Accession NP_001035.1) is another GAM281 target gene, herein designated TARGET GENE. SLC6A3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC6A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of SLC6A3 BINDING SITE, designated SEQ ID:12941, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35942] Another function of GAM281 is therefore inhibition of Solute carrier family 6 (neurotransmitter transporter, dopamine), member 3 (SLC6A3, Accession NP_001035.1), a gene which terminates the action of dopamine by its high affinity sodium- dependent reuptake into presynaptic terminals. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC6A3.

[35943] The function of SLC6A3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.SMAC (Accession NP_620308.1) is another GAM281 target gene, herein designated TARGET GENE. SMAC BINDING SITE1 and SMAC BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by SMAC, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMAC BIND-

ING SITE1 and SMAC BINDING SITE2, designated SEQ ID:1861 and SEQ ID:18165 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35944] Another function of GAM281 is therefore inhibition of SMAC (Accession NP_620308.1), a gene which promotes apoptosis via caspase activation. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMAC.

[35945] The function of SMAC and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Smith-magenis syndrome chromosome region, candidate 5 (SMCR5, Accession NP_658987.1) is another GAM281 target gene, herein designated TARGET GENE. SMCR5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SMCR5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMCR5 BINDING SITE, designated SEQ ID:8677, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35946] Another function of GAM281 is therefore inhibition of Smith-magenis syndrome chromosome region, candidate 5 (SMCR5, Accession NP_658987.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMCR5.

[35947] Synaptosomal-associated protein, 23kda (SNAP23, Accession NP_003816.2) is another GAM281 target gene, herein designated TARGET GENE. SNAP23 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNAP23, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNAP23 BINDING SITE, designated SEQ ID:19007, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35948] Another function of GAM281 is therefore inhibition of Synaptosomal-associated protein, 23kda (SNAP23, Accession NP_003816.2), a gene which is essential component of the high affinity receptor for the general membrane fusion machinery. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNAP23.

[35949] The function of SNAP23 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Synaptosomal-associated protein, 23kda (SNAP23, Accession NP_570710.1) is another GAM281 target gene, herein designated TARGET GENE. SNAP23 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNAP23, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNAP23 BINDING SITE, designated SEQ ID:19007, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35950] Another function of GAM281 is therefore inhibition of Synaptosomal-associated protein, 23kda (SNAP23, Accession NP_570710.1), a gene which is essential component of the high affinity receptor for the general membrane fusion machinery. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNAP23.

[35951] The function of SNAP23 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.SNARK (Accession NP_112214.1) is another GAM281 target gene, herein designated TARGET GENE. SNARK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNARK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNARK BINDING SITE, designated SEQ ID:18622, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35952] Another function of GAM281 is therefore inhibition of SNARK (Accession NP_112214.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNARK.

[35953] Syntaphilin (SNPH, Accession NP_055538.1) is another GAM281 target gene, herein designated TARGET GENE. SNPH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNPH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

SNPH BINDING SITE, designated SEQ ID:15041, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35954] Another function of GAM281 is therefore inhibition of Syntaphilin (SNPH, Accession NP_055538.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNPH.

[35955] Sorting nexin 15 (SNX15, Accession NP_037438.2) is another GAM281 target gene, herein designated TARGET GENE. SNX15 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNX15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNX15 BINDING SITE, designated SEQ ID:7625, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35956] Another function of GAM281 is therefore inhibition of Sorting nexin 15 (SNX15, Accession NP_037438.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions as-

sociated with SNX15.

[35957] Sorting nexin 15 (SNX15, Accession NP_680086.1) is another GAM281 target gene, herein designated TARGET GENE. SNX15 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SNX15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNX15 BINDING SITE, designated SEQ ID:7625, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35958] Another function of GAM281 is therefore inhibition of Sorting nexin 15 (SNX15, Accession NP_680086.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNX15.

[35959] SNX22 (Accession NP_079074.1) is another GAM281 target gene, herein designated TARGET GENE. SNX22 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNX22, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the

complementarity of the nucleotide sequences of SNX22 BINDING SITE, designated SEQ ID:13596, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35960] Another function of GAM281 is therefore inhibition of SNX22 (Accession NP_079074.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNX22.

[35961] SNX27 (Accession NP_112180.4) is another GAM281 target gene, herein designated TARGET GENE. SNX27 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNX27, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNX27 BINDING SITE, designated SEQ ID:16941, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35962] Another function of GAM281 is therefore inhibition of SNX27 (Accession NP_112180.4) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNX27.

[35963] Sialophorin (gpl115, leukosialin, cd43) (SPN, Accession

NP_003114.1) is another GAM281 target gene, herein designated TARGET GENE. SPN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SPN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPN BINDING SITE, designated SEQ ID:16209, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35964] Another function of GAM281 is therefore inhibition of Sialophorin (gpl115, leukosialin, cd43) (SPN, Accession NP_003114.1), a gene which plays a role in the physico-chemical properties of the t- cell surface and in lectin binding. presents carbohydrate ligands to selectins. . and therefore may be associated with Wiskott- aldrich syndrome. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Wiskott- aldrich syndrome, and of other diseases and clinical conditions associated with SPN.

[35965] The function of SPN and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM130.1.Speckle-type poz protein (SPOP, Accession NP_003554.1) is another GAM281 target gene, herein designated TARGET GENE. SPOP BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SPOP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPOP BINDING SITE, designated SEQ ID:5610, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35966] Another function of GAM281 is therefore inhibition of Speckle-type poz protein (SPOP, Accession NP_003554.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SPOP.

[35967] SQV7L (Accession XP_047287.1) is another GAM281 target gene, herein designated TARGET GENE. SQV7L BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SQV7L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SQV7L BINDING SITE, designated SEQ ID:7375, to the nucleotide se-

quence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35968] Another function of GAM281 is therefore inhibition of SQV7L (Accession XP_047287.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SQV7L.

[35969] Sarcalumenin (SRL, Accession XP_064152.3) is another GAM281 target gene, herein designated TARGET GENE. SRL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SRL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SRL BINDING SITE, designated SEQ ID:6681, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35970] Another function of GAM281 is therefore inhibition of Sarcalumenin (SRL, Accession XP_064152.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SRL.

[35971] Serine/arginine repetitive matrix 2 (SRRM2, Accession NP_057417.2) is another GAM281 target gene, herein

designated TARGET GENE. SRRM2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SRRM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SRRM2 BINDING SITE, designated SEQ ID:18975, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35972] Another function of GAM281 is therefore inhibition of Serine/arginine repetitive matrix 2 (SRRM2, Accession NP_057417.2), a gene which RELATED NUCLEAR MATRIX PROTEIN. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SRRM2.

[35973] The function of SRRM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Synovial sarcoma translocation, chromosome 18 (SS18, Accession NP_005628.1) is another GAM281 target gene, herein designated TARGET GENE. SS18 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SS18, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SS18 BINDING SITE, designated SEQ ID:17762, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35974] Another function of GAM281 is therefore inhibition of Synovial sarcoma translocation, chromosome 18 (SS18, Accession NP_005628.1), a gene which is a putative transcriptional activator. and therefore is associated with Human synovial sarcomas. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Human synovial sarcomas., and of other diseases and clinical conditions associated with SS18.

[35975] The function of SS18 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.STAF65(gamma) (Accession NP_055675.1) is another GAM281 target gene, herein designated TARGET GENE. STAF65(gamma) BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by STAF65(gamma), corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STAF65(gamma) BINDING SITE, designated SEQ ID:2196, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35976] Another function of GAM281 is therefore inhibition of STAF65(gamma) (Accession NP_055675.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STAF65(gamma).

[35977] Signal transducing adaptor molecule (sh3 domain and itam motif) 2 (STAM2, Accession NP_005834.3) is another GAM281 target gene, herein designated TARGET GENE. STAM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by STAM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STAM2 BINDING SITE, designated SEQ ID:5301, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35978] Another function of GAM281 is therefore inhibition of Signal transducing adaptor molecule (sh3 domain and itam

motif) 2 (STAM2, Accession NP_005834.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STAM2.

[35979] Staufen, rna binding protein (drosophila) (STAU, Accession NP_004593.1) is another GAM281 target gene, herein designated TARGET GENE. STAU BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by STAU, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STAU BINDING SITE, designated SEQ ID:3950, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35980] Another function of GAM281 is therefore inhibition of Staufen, rna binding protein (drosophila) (STAU, Accession NP_004593.1), a gene which may play a role in specific positioning of mrnas at given sites in the cell and in stimulating their translation at the site. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STAU.

[35981] The function of STAU and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM37.1.Sulfotransferase, estrogen-preferring (STE, Accession NP_005411.1) is another GAM281 target gene, herein designated TARGET GENE. STE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by STE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STE BINDING SITE, designated SEQ ID:3303, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35982] Another function of GAM281 is therefore inhibition of Sulfotransferase, estrogen-preferring (STE, Accession NP_005411.1), a gene which sulfates estrone and dehydroepiandrosterone, but not dopamine. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STE.

[35983] The function of STE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Six transmembrane epithelial antigen of

prostate 2 (STEAP2, Accession NP_694544.1) is another GAM281 target gene, herein designated TARGET GENE. STEAP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by STEAP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STEAP2 BINDING SITE, designated SEQ ID:9147, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35984] Another function of GAM281 is therefore inhibition of Six transmembrane epithelial antigen of prostate 2 (STEAP2, Accession NP_694544.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STEAP2.

[35985] Serine/threonine kinase 10 (STK10, Accession NP_005981.1) is another GAM281 target gene, herein designated TARGET GENE. STK10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by STK10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STK10 BINDING SITE, designated

SEQ ID:2481, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35986] Another function of GAM281 is therefore inhibition of Serine/threonine kinase 10 (STK10, Accession NP_005981.1), a gene which can act on substrates such as myelin basic protein and histone iia on serine and threonine residues. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STK10.

[35987] The function of STK10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM71.1.Stomatin (STOM, Accession NP_004090.3) is another GAM281 target gene, herein designated TARGET GENE. STOM BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by STOM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STOM BINDING SITE, designated SEQ ID:2907, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35988] Another function of GAM281 is therefore inhibition of

Stomatin (STOM, Accession NP_004090.3) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STOM.

[35989] Synaptotagmin xi (SYT11, Accession NP_689493.2) is another GAM281 target gene, herein designated TARGET GENE. SYT11 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SYT11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SYT11 BINDING SITE, designated SEQ ID:9033, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35990] Another function of GAM281 is therefore inhibition of Synaptotagmin xi (SYT11, Accession NP_689493.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SYT11.

[35991] Synaptotagmin xiii (SYT13, Accession NP_065877.1) is another GAM281 target gene, herein designated TARGET GENE. SYT13 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SYT13,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SYT13 BINDING SITE, designated SEQ ID:15294, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35992] Another function of GAM281 is therefore inhibition of Synaptotagmin xiii (SYT13, Accession NP_065877.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SYT13.

[35993] TADA3L (Accession NP_597814.1) is another GAM281 target gene, herein designated TARGET GENE. TADA3L BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TADA3L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TADA3L BINDING SITE, designated SEQ ID:9087, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35994] Another function of GAM281 is therefore inhibition of TADA3L (Accession NP_597814.1) . Accordingly, utilities

of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TADA3L.

[35995] Taf11 rna polymerase ii, tata box binding protein (tbp)-associated factor, 28kda (TAF11, Accession NP_005634.1) is another GAM281 target gene, herein designated TARGET GENE. TAF11 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TAF11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TAF11 BINDING SITE, designated SEQ ID:1997, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35996] Another function of GAM281 is therefore inhibition of Taf11 rna polymerase ii, tata box binding protein (tbp)-associated factor, 28kda (TAF11, Accession NP_005634.1), a gene which plays a central role in mediating promoter responses to various activators and repressors. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAF11.

[35997] The function of TAF11 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.T-cell acute lymphocytic leukemia 1 (TAL1, Accession NP_003180.1) is another GAM281 target gene, herein designated TARGET GENE. TAL1 BINDING SITE1 and TAL1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TAL1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TAL1 BINDING SITE1 and TAL1 BINDING SITE2, designated SEQ ID:18260 and SEQ ID:3146 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[35998] Another function of GAM281 is therefore inhibition of T-cell acute lymphocytic leukemia 1 (TAL1, Accession NP_003180.1), a gene which may help control cell growth and differentiation. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAL1.

[35999] The function of TAL1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM30.1.Tap binding protein (tapasin) (TAPBP, Accession NP_003181.3) is another GAM281 target gene, herein designated TARGET GENE. TAPBP BINDING SITE1 through TAPBP BINDING SITE3 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TAPBP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TAPBP BINDING SITE1 through TAPBP BINDING SITE3, designated SEQ ID:12247, SEQ ID:11523 and SEQ ID:16940 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36000] Another function of GAM281 is therefore inhibition of Tap binding protein (tapasin) (TAPBP, Accession NP_003181.3), a gene which is involved in MHC class I-restricted antigen processing. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAPBP.

[36001] The function of TAPBP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Tyrosine aminotransferase (TAT, Accession

NP_000344.1) is another GAM281 target gene, herein designated TARGET GENE. TAT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TAT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TAT BINDING SITE, designated SEQ ID:18942, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36002] Another function of GAM281 is therefore inhibition of Tyrosine aminotransferase (TAT, Accession NP_000344.1), a gene which is tyrosine aminotransferase and strongly similar to rat Rn.9947, which plays a role in gluconeogenesis. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAT.

[36003] The function of TAT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Tafazzin (cardiomyopathy, dilated 3a (x-linked); endocardial fibroelastosis 2; barth syndrome) (TAZ, Accession NP_851831.1) is another GAM281 target

gene, herein designated TARGET GENE. TAZ BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TAZ, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TAZ BINDING SITE, designated SEQ ID:9257, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36004] Another function of GAM281 is therefore inhibition of Tafazzin (cardiomyopathy, dilated 3a (x-linked); endocardial fibroelastosis 2; barth syndrome) (TAZ, Accession NP_851831.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TAZ.

[36005] Tbc1 domain family, member 5 (TBC1D5, Accession NP_055559.1) is another GAM281 target gene, herein designated TARGET GENE. TBC1D5 BINDING SITE1 and TBC1D5 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TBC1D5, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

TBC1D5 BINDING SITE1 and TBC1D5 BINDING SITE2, designated SEQ ID:16449 and SEQ ID:14859 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36006] Another function of GAM281 is therefore inhibition of Tbc1 domain family, member 5 (TBC1D5, Accession NP_055559.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TBC1D5.

[36007] Transcription factor 2, hepatic; lf-b3; variant hepatic nuclear factor (TCF2, Accession NP_006472.1) is another GAM281 target gene, herein designated TARGET GENE. TCF2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TCF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCF2 BINDING SITE, designated SEQ ID:625, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36008] Another function of GAM281 is therefore inhibition of Transcription factor 2, hepatic; lf-b3; variant hepatic nuclear factor (TCF2, Accession NP_006472.1), a gene which

probably binds to the inverted palindrome 5'- gttaatnat-taac- 3'. and therefore is associated with Maturity- onset diabetes of the young type 5 (mody5), familial hypoplastic glomerulocystic kidney disease (gckd). Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Maturity- onset diabetes of the young type 5 (mody5), familial hypoplastic glomerulocystic kidney disease (gckd), and of other diseases and clinical conditions associated with TCF2.

[36009] The function of TCF2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.1.T-cell leukemia/lymphoma 6 (TCL6, Accession NP_055233.1) is another GAM281 target gene, herein designated TARGET GENE. TCL6 BINDING SITE1 and TCL6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TCL6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL6 BINDING SITE1 and TCL6 BINDING SITE2, designated SEQ ID:17450 and SEQ ID:17450 respectively, to the nucleotide sequence of GAM281 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:278.

[36010] Another function of GAM281 is therefore inhibition of T-cell leukemia/lymphoma 6 (TCL6, Accession NP_055233.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCL6.

[36011] T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065577.2) is another GAM281 target gene, herein designated TARGET GENE. TCL6 BINDING SITE1 and TCL6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TCL6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL6 BINDING SITE1 and TCL6 BINDING SITE2, designated SEQ ID:17450 and SEQ ID:9387 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36012] Another function of GAM281 is therefore inhibition of T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065577.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCL6.

[36013] T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065578.2) is another GAM281 target gene, herein designated TARGET GENE. TCL6 BINDING SITE1 and TCL6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TCL6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL6 BINDING SITE1 and TCL6 BINDING SITE2, designated SEQ ID:9387 and SEQ ID:17450 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36014] Another function of GAM281 is therefore inhibition of T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065578.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCL6.

[36015] Teratocarcinoma-derived growth factor 1 (TDGF1, Accession NP_003203.1) is another GAM281 target gene, herein designated TARGET GENE. TDGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TDGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TDGF1 BINDING SITE, designated SEQ ID:8563, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36016] Another function of GAM281 is therefore inhibition of Teratocarcinoma-derived growth factor 1 (TDGF1, Accession NP_003203.1), a gene which can play a role in the determination of the epiblastic cells that subsequently give rise to the mesoderm. and therefore may be associated with Forebrain defects. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Forebrain defects, and of other diseases and clinical conditions associated with TDGF1.

[36017] The function of TDGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.TERA (Accession NP_067061.1) is another GAM281 target gene, herein designated TARGET GENE. TERA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TERA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

TERA BINDING SITE, designated SEQ ID:17755, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36018] Another function of GAM281 is therefore inhibition of TERA (Accession NP_067061.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TERA.

[36019] Telomeric repeat binding factor (nima-interacting) 1 (TERF1, Accession NP_003209.1) is another GAM281 target gene, herein designated TARGET GENE. TERF1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TERF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TERF1 BINDING SITE, designated SEQ ID:1745, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36020] Another function of GAM281 is therefore inhibition of Telomeric repeat binding factor (nima-interacting) 1 (TERF1, Accession NP_003209.1), a gene which negatively regulates telomere length, involves in regulation of the mitotic spindle. Accordingly, utilities of GAM281 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with TERF1.

[36021] The function of TERF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Telomeric repeat binding factor (nima-interacting) 1 (TERF1, Accession NP_059523.1) is another GAM281 target gene, herein designated TARGET GENE. TERF1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TERF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TERF1 BINDING SITE, designated SEQ ID:1745, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36022] Another function of GAM281 is therefore inhibition of Telomeric repeat binding factor (nima-interacting) 1 (TERF1, Accession NP_059523.1), a gene which negatively regulates telomere length, involves in regulation of the mitotic spindle. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with TERF1.

[36023] The function of TERF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Telomeric repeat binding factor 2 (TERF2, Accession NP_005643.1) is another GAM281 target gene, herein designated TARGET GENE. TERF2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TERF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TERF2 BINDING SITE, designated SEQ ID:1744, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36024] Another function of GAM281 is therefore inhibition of Telomeric repeat binding factor 2 (TERF2, Accession NP_005643.1), a gene which plays a key role in the protective activity of telomeres. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TERF2.

[36025] The function of TERF2 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM133.2.Tgfb-induced factor 2 (tale family homeobox) (TGIF2, Accession NP_068581.1) is another GAM281 target gene, herein designated TARGET GENE. TGIF2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TGIF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TGIF2 BINDING SITE, designated SEQ ID:6881, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36026] Another function of GAM281 is therefore inhibition of Tgfb-induced factor 2 (tale family homeobox) (TGIF2, Accession NP_068581.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TGIF2.

[36027] Thioesterase, adipose associated (THEA, Accession NP_671517.1) is another GAM281 target gene, herein designated TARGET GENE. THEA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by THEA, corresponding to a target binding site such as BINDING SITE I, BINDING

SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of THEA BINDING SITE, designated SEQ ID:14452, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36028] Another function of GAM281 is therefore inhibition of Thioesterase, adipose associated (THEA, Accession NP_671517.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with THEA.

[36029] Tigger transposable element derived 6 (TIGD6, Accession NP_112215.1) is another GAM281 target gene, herein designated TARGET GENE. TIGD6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TIGD6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TIGD6 BINDING SITE, designated SEQ ID:4933, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36030] Another function of GAM281 is therefore inhibition of Tigger transposable element derived 6 (TIGD6, Accession NP_112215.1) . Accordingly, utilities of GAM281 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with TIGD6.

[36031] TIM50L (Accession XP_053074.2) is another GAM281 target gene, herein designated TARGET GENE. TIM50L BINDING SITE1 and TIM50L BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TIM50L, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TIM50L BINDING SITE1 and TIM50L BINDING SITE2, designated SEQ ID:10157 and SEQ ID:5989 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36032] Another function of GAM281 is therefore inhibition of TIM50L (Accession XP_053074.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TIM50L.

[36033] Thymidine kinase 2, mitochondrial (TK2, Accession NP_004605.1) is another GAM281 target gene, herein designated TARGET GENE. TK2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TK2 BINDING SITE, designated SEQ ID:3160, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36034] Another function of GAM281 is therefore inhibition of Thymidine kinase 2, mitochondrial (TK2, Accession NP_004605.1), a gene which phosphorylates thymidine, deoxycytidine, deoxyuridine, and also anti- viral and anti-cancer nucleoside analogs and therefore may be associated with Mitochondrial dna depletion myopathy. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Mitochondrial dna depletion myopathy, and of other diseases and clinical conditions associated with TK2.

[36035] The function of TK2 has been established by previous studies. Johansson and Karlsson (1997) cloned cDNAs encoding human TK2. The gene encodes a 234- amino acid polypeptide. Although TK2 is believed to reside in mitochondria, it contains no mitochondrial translocation signal sequence. Northern blot analysis revealed that TK2 was ubiquitously expressed as 2 transcripts of 2.4 and 4 kb. Expression of the TK2 cDNA revealed a 60- kD protein with phosphorylation activity similar to purified human

TK2. Based on the partial protein sequence of human TK2, Wang et al. (1999) isolated a human brain TK2 cDNA. These authors noted that although the cDNA they isolated corresponds to the full- length mature protein, it is likely to be incomplete because it lacks the coding region for a mitochondrial target presequence. They reported that the predicted protein sequence matched that of purified TK2, but differed at the N- terminus and at amino acid 28 from the TK2 sequence deduced by Johansson and Karlsson (1997). TK2 shares approximately 40% identity with deoxycytidine kinase (OMIM Ref. No. 125450) and deoxyguanosine kinase (OMIM Ref. No. 601465) on the amino acid level. Wang et al. (1999) characterized both recombinant and native TK2 forms and found that the enzyme has broad substrate specificity and complex kinetics, suggesting that it may play a role in the activation of chemotherapeutic nucleoside analogs. Northern blot analysis indicated that the TK2 gene was expressed as multiple transcripts, some of which show a tissue- specific pattern. The highest levels of expression were observed in testis and ovary. Saada et al. (2001) identified 2 mutations in TK2, his90 to asn (188250.0001) and ile181 to asn (188250.0002), in 4 individuals who developed devastat-

ing myopathy and depletion of muscular mtDNA in infancy. In these individuals, the activity of TK2 in muscle mitochondria was reduced to 14 to 45% of the mean value in healthy control individuals. Mandel et al. (2001) identified mutations in the DGUOK gene in another form of mtDNA depletion syndrome, the hepatocerebral form (see OMIM Ref. No. 251880). They noted that the main supply of dNTPs for mtDNA synthesis comes from the salvage pathway initiated by DGK and TK2. The association of mtDNA depletion with mutations in the genes encoding these 2 kinases suggested that the salvage pathway enzymes are involved in the maintenance of balanced mitochondrial dNTP pools.

[36036]

[36037] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[36038] Wang, L.; Munch- Petersen, B.; Herrstrom Sjoberg, A.; Hellman, U.; Bergman, T.; Jornvall, H.; Eriksson, S. : Human thymidine kinase 2: molecular cloning and characterisation of the enzyme activity with antiviral and cytostatic nucleoside substrates. FEBS Lett. 443: 170- 174, 1999. ; and

[36039] Saada, A.; Shaag, A.; Mandel, H.; Nevo, Y.; Eriksson, S.; Elpeleg, O. : Mutant mitochondrial thymidine kinase in mitochondrial DNA depletion myopathy. Nature Genet. 29: 342- 344, 2001.

[36040] Further studies establishing the function and utilities of TK2 are found in John Hopkins OMIM database record ID 188250, and in cited publications listed in Table 5, which are hereby incorporated by reference.Toll-like receptor 5 (TLR5, Accession NP_003259.2) is another GAM281 target gene, herein designated TARGET GENE. TLR5 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TLR5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TLR5 BINDING SITE, designated SEQ ID:16229, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36041] Another function of GAM281 is therefore inhibition of Toll-like receptor 5 (TLR5, Accession NP_003259.2), a gene which participates in the innate immune response to bacterial flagellins. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and

clinical conditions associated with TLR5.

[36042] The function of TLR5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1.Transmembrane, cochlear expressed, 1 (TMC1, Accession NP_619636.2) is another GAM281 target gene, herein designated TARGET GENE. TMC1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TMC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMC1 BINDING SITE, designated SEQ ID:2152, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36043] Another function of GAM281 is therefore inhibition of Transmembrane, cochlear expressed, 1 (TMC1, Accession NP_619636.2), a gene which is required for normal function of cochlear hair cells and therefore may be associated with Autosomal recessive nonsyndromic neurosensory deafness and autosomal dominant nonsyndromic sensorineural hearing loss . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Autosomal

recessive nonsyndromic neurosensory deafness and autosomal dominant nonsyndromic sensorineural hearing loss ., and of other diseases and clinical conditions associated with TMC1.

[36044] The function of TMC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.TMEM14A (Accession NP_054770.1) is another GAM281 target gene, herein designated TARGET GENE. TMEM14A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TMEM14A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMEM14A BINDING SITE, designated SEQ ID:5271, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36045] Another function of GAM281 is therefore inhibition of TMEM14A (Accession NP_054770.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMEM14A.

[36046] Transmembrane protease, serine 3 (TMPRSS3, Accession

NP_076927.1) is another GAM281 target gene, herein designated TARGET GENE. TMPRSS3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TMPRSS3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMPRSS3 BINDING SITE, designated SEQ ID:6625, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36047] Another function of GAM281 is therefore inhibition of Transmembrane protease, serine 3 (TMPRSS3, Accession NP_076927.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMPRSS3.

[36048] Transmembrane protease, serine 3 (TMPRSS3, Accession NP_115780.1) is another GAM281 target gene, herein designated TARGET GENE. TMPRSS3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TMPRSS3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

TMPRSS3 BINDING SITE, designated SEQ ID:6625, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36049] Another function of GAM281 is therefore inhibition of Transmembrane protease, serine 3 (TMPRSS3, Accession NP_115780.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TMPRSS3.

[36050] Transmembrane protease, serine 3 (TMPRSS3, Accession NP_115777.1) is another GAM281 target gene, herein designated TARGET GENE. TMPRSS3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TMPRSS3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TMPRSS3 BINDING SITE, designated SEQ ID:6625, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36051] Another function of GAM281 is therefore inhibition of Transmembrane protease, serine 3 (TMPRSS3, Accession NP_115777.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with TMPRSS3.

[36052] Tumor necrosis factor, alpha-induced protein 2 (TNFAIP2, Accession NP_006282.2) is another GAM281 target gene, herein designated TARGET GENE. TNFAIP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNFAIP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFAIP2 BINDING SITE, designated SEQ ID:17621, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36053] Another function of GAM281 is therefore inhibition of Tumor necrosis factor, alpha-induced protein 2 (TNFAIP2, Accession NP_006282.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFAIP2.

[36054] Tumor necrosis factor receptor superfamily, member 10b (TNFRSF10B, Accession NP_003833.3) is another GAM281 target gene, herein designated TARGET GENE. TNFRSF10B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF10B, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF10B BINDING SITE, designated SEQ ID:4398, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36055] Another function of GAM281 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 10b (TNFRSF10B, Accession NP_003833.3), a gene which forms complex that induces apoptosis. and therefore may be associated with Squamous cell carcinoma . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Squamous cell carcinoma ., and of other diseases and clinical conditions associated with TNFRSF10B.

[36056] The function of TNFRSF10B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Tumor necrosis factor receptor superfamily, member 10b (TNFRSF10B, Accession NP_671716.1) is another GAM281 target gene, herein designated TARGET GENE. TNFRSF10B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF10B, corresponding to

a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF10B BINDING SITE, designated SEQ ID:4398, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36057] Another function of GAM281 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 10b (TNFRSF10B, Accession NP_671716.1), a gene which forms complex that induces apoptosis. and therefore may be associated with Squamous cell carcinoma . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Squamous cell carcinoma ., and of other diseases and clinical conditions associated with TNFRSF10B.

[36058] The function of TNFRSF10B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Tumor necrosis factor receptor superfamily, member 11a, activator of nfkb (TNFRSF11A, Accession NP_003830.1) is another GAM281 target gene, herein designated TARGET GENE. TNFRSF11A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNFRSF11A, corresponding to

a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF11A BINDING SITE, designated SEQ ID:2200, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36059] Another function of GAM281 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 11a, activator of nfkb (TNFRSF11A, Accession NP_003830.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFRSF11A.

[36060] Tumor necrosis factor receptor superfamily, member 18 (TNFRSF18, Accession NP_683700.1) is another GAM281 target gene, herein designated TARGET GENE. TNFRSF18 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF18 BINDING SITE, designated SEQ ID:8120, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36061] Another function of GAM281 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 18 (TNFRSF18, Accession NP_683700.1), a gene which interacts between activated t lymphocytes and endothelial cells. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFRSF18.

[36062] The function of TNFRSF18 has been established by previous studies. Members of the tumor necrosis factor (TNF; 191160) and TNF receptor (TNFR) superfamilies regulate diverse biologic functions, including cell proliferation, differentiation, and survival. See 191190. Using differential display to identify T cell mRNAs induced by the synthetic glucocorticoid hormone dexamethasone, Nocentini et al. (1997) identified a mouse cDNA encoding a novel member of the TNFR family. They designated the corresponding gene Gitr for 'glucocorticoid- induced TNFR family- related gene.' Like other TNFRs, the predicted Gitr protein contains cysteine- rich repeats in the extracellular domain. In addition, the intracellular domain of Gitr shares significant homology with those of the mouse and human TNFRs 4- 1BB (OMIM Ref. No. 602250) and CD27 (OMIM Ref. No. 186711). Nocentini et al. (1997) demonstrated

that the Gitr gene is induced in T cells by dexamethasone as well as by other cell- activating stimuli. Gitr expression protected T cells from apoptosis induced by treatment with anti- CD3 (OMIM Ref. No. 186790) antibodies, but not by other apoptotic agents. The authors concluded that Gitr is a new member of the TNFR family involved in the regulation of T cell receptor- mediated cell death. Kwon et al. (1999) isolated cDNAs encoding the human Gitr homolog and the Gitr ligand (OMIM Ref. No. 603898), which they designated AITR (activation- inducible TNFR family member) and AITRL, respectively. These authors reported that the predicted 234- amino acid AITR protein is a type I transmembrane protein with a signal peptide and a single transmembrane region. AITR and mouse Gitr proteins are 55% identical. As with other TNFR family members, when expressed in mammalian cells, AITR mediated NF- kappa- B (see OMIM Ref. No. 164011) activation via TRAF2 (OMIM Ref. No. 601895). TRAF1 (OMIM Ref. No. 601711) and TRAF3 (OMIM Ref. No. 601896) appeared to downregulate AITR- induced NF- kappa- B activation. Northern blot analysis revealed that the 1.25- kb AITR mRNA is expressed in lymph node, peripheral blood leukocytes, and, weakly, in spleen. Expression of AITR, like that of other

TNFRs, was upregulated in peripheral mononuclear cells after antigen stimulation. AITRL was constitutively expressed in an endothelial cell line, leading the authors to suggest that AITR and its ligand may be important for interactions between activated T lymphocytes and endothelial cells. Independently, Gurney et al. (1999) identified cDNAs encoding AITR and AITRL, which they called GITR and GITRL, respectively. Coexpression of ligand and receptor protected Jurkat T cells against antigen receptor-induced cell death, suggesting that GITRL and GITR may modulate T lymphocyte survival in peripheral tissues.

[36063]

[36064] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[36065] Gurney, A. L.; Marsters, S. A.; Huang, A.; Pitti, R. M.; Mark, M.; Baldwin, D. T.; Gray, A. M.; Dowd, P.; Brush, J.; Heldens, S.; Schow, P.; Goddard, A. D.; Wood, W. I.; Baker, K. P.; Godowski, P. J.; Ashkenazi, A. : Identification of a new member of the tumor necrosis factor family and its receptor, a human ortholog of mouse GITR. Curr. Biol. 9: 215- 218, 1999. ; and

[36066] Kwon, B.; Yu, K.- Y.; Ni, J.; Yu, G.- L.; Jang, I.- K.; Kim, Y.-

J.; Xing, L.; Liu, D.; Wang, S.- X.; Kwon, B. S. : Identification of a novel activation- inducible protein of the tumor necro.

[36067] Further studies establishing the function and utilities of TNFRSF18 are found in John Hopkins OMIM database record ID 603905, and in cited publications listed in Table 5, which are hereby incorporated by reference.Tumor necrosis factor receptor superfamily, member 18 (TNFRSF18, Accession NP_004186.1) is another GAM281 target gene, herein designated TARGET GENE. TNFRSF18 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF18 BINDING SITE, designated SEQ ID:8120, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36068] Another function of GAM281 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 18 (TNFRSF18, Accession NP_004186.1), a gene which interacts between activated t lymphocytes and endothelial cells. Accordingly, utilities of GAM281 include diagnosis,

prevention and treatment of diseases and clinical conditions associated with TNFRSF18.

[36069] The function of TNFRSF18 has been established by previous studies. Members of the tumor necrosis factor (TNF; 191160) and TNF receptor (TNFR) superfamilies regulate diverse biologic functions, including cell proliferation, differentiation, and survival. See 191190. Using differential display to identify T cell mRNAs induced by the synthetic glucocorticoid hormone dexamethasone, Nocentini et al. (1997) identified a mouse cDNA encoding a novel member of the TNFR family. They designated the corresponding gene Gitr for 'glucocorticoid- induced TNFR family- related gene.' Like other TNFRs, the predicted Gitr protein contains cysteine- rich repeats in the extracellular domain. In addition, the intracellular domain of Gitr shares significant homology with those of the mouse and human TNFRs 4- 1BB (OMIM Ref. No. 602250) and CD27 (OMIM Ref. No. 186711). Nocentini et al. (1997) demonstrated that the Gitr gene is induced in T cells by dexamethasone as well as by other cell- activating stimuli. Gitr expression protected T cells from apoptosis induced by treatment with anti- CD3 (OMIM Ref. No. 186790) antibodies, but not by other apoptotic agents. The authors concluded that

Gitr is a new member of the TNFR family involved in the regulation of T cell receptor- mediated cell death. Kwon et al. (1999) isolated cDNAs encoding the human Gitr homolog and the Gitr ligand (OMIM Ref. No. 603898), which they designated AITR (activation- inducible TNFR family member) and AITRL, respectively. These authors reported that the predicted 234- amino acid AITR protein is a type I transmembrane protein with a signal peptide and a single transmembrane region. AITR and mouse Gitr proteins are 55% identical. As with other TNFR family members, when expressed in mammalian cells, AITR mediated NF- kappa-B (see OMIM Ref. No. 164011) activation via TRAF2 (OMIM Ref. No. 601895). TRAF1 (OMIM Ref. No. 601711) and TRAF3 (OMIM Ref. No. 601896) appeared to downregulate AITR- induced NF- kappa- B activation. Northern blot analysis revealed that the 1.25- kb AITR mRNA is expressed in lymph node, peripheral blood leukocytes, and, weakly, in spleen. Expression of AITR, like that of other TNFRs, was upregulated in peripheral mononuclear cells after antigen stimulation. AITRL was constitutively expressed in an endothelial cell line, leading the authors to suggest that AITR and its ligand may be important for interactions between activated T lymphocytes and endothe-

lial cells. Independently, Gurney et al. (1999) identified cDNAs encoding AITR and AITRL, which they called GITR and GITRL, respectively. Coexpression of ligand and receptor protected Jurkat T cells against antigen receptor-induced cell death, suggesting that GITRL and GITR may modulate T lymphocyte survival in peripheral tissues.

[36070]

[36071] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[36072] Gurney, A. L.; Marsters, S. A.; Huang, A.; Pitti, R. M.; Mark, M.; Baldwin, D. T.; Gray, A. M.; Dowd, P.; Brush, J.; Heldens, S.; Schow, P.; Goddard, A. D.; Wood, W. I.; Baker, K. P.; Godowski, P. J.; Ashkenazi, A. : Identification of a new member of the tumor necrosis factor family and its receptor, a human ortholog of mouse GITR. Curr. Biol. 9: 215- 218, 1999. ; and

[36073] Kwon, B.; Yu, K.- Y.; Ni, J.; Yu, G.- L.; Jang, I.- K.; Kim, Y.- J.; Xing, L.; Liu, D.; Wang, S.- X.; Kwon, B. S. : Identification of a novel activation- inducible protein of the tumor necro.

[36074] Further studies establishing the function and utilities of TNFRSF18 are found in John Hopkins OMIM database

record ID 603905, and in cited publications listed in Table 5, which are hereby incorporated by reference.Tumor necrosis factor receptor superfamily, member 18 (TNFRSF18, Accession NP_683699.1) is another GAM281 target gene, herein designated TARGET GENE. TNFRSF18 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF18 BINDING SITE, designated SEQ ID:8120, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36075] Another function of GAM281 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 18 (TNFRSF18, Accession NP_683699.1), a gene which interacts between activated t lymphocytes and endothelial cells. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFRSF18.

[36076] The function of TNFRSF18 has been established by previous studies. Members of the tumor necrosis factor (TNF; 191160) and TNF receptor (TNFR) superfamilies regulate

diverse biologic functions, including cell proliferation, differentiation, and survival. See 191190. Using differential display to identify T cell mRNAs induced by the synthetic glucocorticoid hormone dexamethasone, Nocentini et al. (1997) identified a mouse cDNA encoding a novel member of the TNFR family. They designated the corresponding gene Gitr for 'glucocorticoid- induced TNFR family- related gene.' Like other TNFRs, the predicted Gitr protein contains cysteine- rich repeats in the extracellular domain. In addition, the intracellular domain of Gitr shares significant homology with those of the mouse and human TNFRs 4- 1BB (OMIM Ref. No. 602250) and CD27 (OMIM Ref. No. 186711). Nocentini et al. (1997) demonstrated that the Gitr gene is induced in T cells by dexamethasone as well as by other cell- activating stimuli. Gitr expression protected T cells from apoptosis induced by treatment with anti- CD3 (OMIM Ref. No. 186790) antibodies, but not by other apoptotic agents. The authors concluded that Gitr is a new member of the TNFR family involved in the regulation of T cell receptor- mediated cell death. Kwon et al. (1999) isolated cDNAs encoding the human Gitr homolog and the Gitr ligand (OMIM Ref. No. 603898), which they designated AITR (activation- inducible TNFR family

member) and AITRL, respectively. These authors reported that the predicted 234- amino acid AITR protein is a type I transmembrane protein with a signal peptide and a single transmembrane region. AITR and mouse Gitr proteins are 55% identical. As with other TNFR family members, when expressed in mammalian cells, AITR mediated NF- kappa-B (see OMIM Ref. No. 164011) activation via TRAF2 (OMIM Ref. No. 601895). TRAF1 (OMIM Ref. No. 601711) and TRAF3 (OMIM Ref. No. 601896) appeared to downregulate AITR- induced NF- kappa- B activation. Northern blot analysis revealed that the 1.25- kb AITR mRNA is expressed in lymph node, peripheral blood leukocytes, and, weakly, in spleen. Expression of AITR, like that of other TNFRs, was upregulated in peripheral mononuclear cells after antigen stimulation. AITRL was constitutively expressed in an endothelial cell line, leading the authors to suggest that AITR and its ligand may be important for interactions between activated T lymphocytes and endothelial cells. Independently, Gurney et al. (1999) identified cDNAs encoding AITR and AITRL, which they called GITR and GITRL, respectively. Coexpression of ligand and receptor protected Jurkat T cells against antigen receptor-induced cell death, suggesting that GITRL and GITR may

modulate T lymphocyte survival in peripheral tissues.

[36077]

[36078] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[36079] Gurney, A. L.; Marsters, S. A.; Huang, A.; Pitti, R. M.; Mark, M.; Baldwin, D. T.; Gray, A. M.; Dowd, P.; Brush, J.; Heldens, S.; Schow, P.; Goddard, A. D.; Wood, W. I.; Baker, K. P.; Godowski, P. J.; Ashkenazi, A. : Identification of a new member of the tumor necrosis factor family and its receptor, a human ortholog of mouse GITR. Curr. Biol. 9: 215- 218, 1999. ; and

[36080] Kwon, B.; Yu, K.- Y.; Ni, J.; Yu, G.- L.; Jang, I.- K.; Kim, Y.- J.; Xing, L.; Liu, D.; Wang, S.- X.; Kwon, B. S. : Identification of a novel activation- inducible protein of the tumor necro.

[36081] Further studies establishing the function and utilities of TNFRSF18 are found in John Hopkins OMIM database record ID 603905, and in cited publications listed in Table 5, which are hereby incorporated by reference.Tumor necrosis factor receptor superfamily, member 9 (TNFRSF9, Accession NP_001552.2) is another GAM281 target gene, herein designated TARGET GENE. TNFRSF9 BINDING SITE is

a target binding site found in the 3` untranslated region of mRNA encoded by TNFRSF9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF9 BINDING SITE, designated SEQ ID:13464, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36082] Another function of GAM281 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 9 (TNFRSF9, Accession NP_001552.2), a gene which inhibits proliferation of activated T lymphocytes. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFRSF9.

[36083] The function of TNFRSF9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Tnfaip3 interacting protein 3 (TNIP3, Accession NP_079149.2) is another GAM281 target gene, herein designated TARGET GENE. TNIP3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TNIP3, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNIP3 BINDING SITE, designated SEQ ID:15713, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36084] Another function of GAM281 is therefore inhibition of Tnfaip3 interacting protein 3 (TNIP3, Accession NP_079149.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNIP3.

[36085] TOLLIP (Accession NP_061882.2) is another GAM281 target gene, herein designated TARGET GENE. TOLLIP BINDING SITE1 and TOLLIP BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by TOLLIP, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TOLLIP BINDING SITE1 and TOLLIP BINDING SITE2, designated SEQ ID:9557 and SEQ ID:13694 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36086] Another function of GAM281 is therefore inhibition of

TOLLIP (Accession NP_061882.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TOLLIP.

[36087] Torsin family 1, member b (torsin b) (TOR1B, Accession NP_055321.1) is another GAM281 target gene, herein designated TARGET GENE. TOR1B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TOR1B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TOR1B BINDING SITE, designated SEQ ID:14221, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36088] Another function of GAM281 is therefore inhibition of Torsin family 1, member b (torsin b) (TOR1B, Accession NP_055321.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TOR1B.

[36089] Tumor protein p53 (li-fraumeni syndrome) (TP53, Accession NP_000537.2) is another GAM281 target gene, herein designated TARGET GENE. TP53 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by TP53, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TP53 BINDING SITE, designated SEQ ID:4654, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36090] Another function of GAM281 is therefore inhibition of Tumor protein p53 (li-fraumeni syndrome) (TP53, Accession NP_000537.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TP53.

[36091] Thiopurine s-methyltransferase (TPMT, Accession NP_000358.1) is another GAM281 target gene, herein designated TARGET GENE. TPMT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TPMT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TPMT BINDING SITE, designated SEQ ID:19670, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36092] Another function of GAM281 is therefore inhibition of

Thiopurine s-methyltransferase (TPMT, Accession NP_000358.1), a gene which catalyzes the s- methylation of thiopurine drugs such as 6- mercaptopurine. and therefore may be associated with Thiopurine s- methyl-transferase polymorphism. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Thiopurine s- methyltransferase polymorphism, and of other diseases and clinical conditions associated with TPMT.

[36093] The function of TPMT and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Tnf receptor-associated factor 2 (TRAF2, Accession NP_663770.1) is another GAM281 target gene, herein designated TARGET GENE. TRAF2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TRAF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRAF2 BINDING SITE, designated SEQ ID:778, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36094] Another function of GAM281 is therefore inhibition of Tnf receptor-associated factor 2 (TRAF2, Accession NP_663770.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRAF2.

[36095] Tnf receptor-associated factor 2 (TRAF2, Accession NP_066961.2) is another GAM281 target gene, herein designated TARGET GENE. TRAF2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TRAF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRAF2 BINDING SITE, designated SEQ ID:778, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36096] Another function of GAM281 is therefore inhibition of Tnf receptor-associated factor 2 (TRAF2, Accession NP_066961.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRAF2.

[36097] Tnf receptor-associated factor 5 (TRAF5, Accession NP_665702.1) is another GAM281 target gene, herein

designated TARGET GENE. TRAF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TRAF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRAF5 BINDING SITE, designated SEQ ID:7045, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36098] Another function of GAM281 is therefore inhibition of Tnf receptor-associated factor 5 (TRAF5, Accession NP_665702.1), a gene which Member of a family of proteins that interact with TNF receptors; binds the lymphotoxin beta receptor (LTBR). Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRAF5.

[36099] The function of TRAF5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM69.2.Tnf receptor-associated factor 5 (TRAF5, Accession NP_004610.1) is another GAM281 target gene, herein designated TARGET GENE. TRAF5 BINDING SITE is a target binding site found in the 3` untranslated region of

multiple transcripts of mRNA encoded by TRAF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRAF5 BINDING SITE, designated SEQ ID:7045, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36100] Another function of GAM281 is therefore inhibition of Tnf receptor-associated factor 5 (TRAF5, Accession NP_004610.1), a gene which Member of a family of proteins that interact with TNF receptors; binds the lymphotoxin beta receptor (LTBR). Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRAF5.

[36101] The function of TRAF5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM69.2.TRAP150 (Accession NP_005110.1) is another GAM281 target gene, herein designated TARGET GENE. TRAP150 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRAP150, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4

illustrates the complementarity of the nucleotide sequences of TRAP150 BINDING SITE, designated SEQ ID:4929, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36102] Another function of GAM281 is therefore inhibition of TRAP150 (Accession NP_005110.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRAP150.

[36103] Three prime repair exonuclease 1 (TREX1, Accession NP_338598.1) is another GAM281 target gene, herein designated TARGET GENE. TREX1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by TREX1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TREX1 BINDING SITE, designated SEQ ID:8479, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36104] Another function of GAM281 is therefore inhibition of Three prime repair exonuclease 1 (TREX1, Accession NP_338598.1) . Accordingly, utilities of GAM281 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with TREX1.

[36105] Tripartite motif-containing 16 (TRIM16, Accession NP_006461.2) is another GAM281 target gene, herein designated TARGET GENE. TRIM16 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRIM16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM16 BINDING SITE, designated SEQ ID:4601, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36106] Another function of GAM281 is therefore inhibition of Tripartite motif-containing 16 (TRIM16, Accession NP_006461.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM16.

[36107] Tripartite motif-containing 5 (TRIM5, Accession NP_149023.1) is another GAM281 target gene, herein designated TARGET GENE. TRIM5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TRIM5, corresponding

to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM5 BINDING SITE, designated SEQ ID:5879, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36108] Another function of GAM281 is therefore inhibition of Tripartite motif-containing 5 (TRIM5, Accession NP_149023.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM5.

[36109] Tripartite motif-containing 6 (TRIM6, Accession NP_477514.1) is another GAM281 target gene, herein designated TARGET GENE. TRIM6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRIM6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRIM6 BINDING SITE, designated SEQ ID:13572, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36110] Another function of GAM281 is therefore inhibition of Tri-

partite motif-containing 6 (TRIM6, Accession NP_477514.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRIM6.

[36111] Transient receptor potential cation channel, subfamily m, member 6 (TRPM6, Accession NP_060132.3) is another GAM281 target gene, herein designated TARGET GENE. TRPM6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TRPM6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPM6 BINDING SITE, designated SEQ ID:18177, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36112] Another function of GAM281 is therefore inhibition of Transient receptor potential cation channel, subfamily m, member 6 (TRPM6, Accession NP_060132.3), a gene which contains a predicted ion channel domain and a protein kinase domain. and therefore is associated with Hypomagnesemia with secondary hypocalcemia. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Hypomagnesemia with secondary hypocalcemia,

and of other diseases and clinical conditions associated with TRPM6.

[36113] The function of TRPM6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542436.1) is another GAM281 target gene, herein designated TARGET GENE. TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TRPV1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2, designated SEQ ID:19833 and SEQ ID:16980 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36114] Another function of GAM281 is therefore inhibition of Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542436.1), a gene which functions as a receptor for capsaicin. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with TRPV1.

[36115] The function of TRPV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_061197.3) is another GAM281 target gene, herein designated TARGET GENE. TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TRPV1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2, designated SEQ ID:16980 and SEQ ID:19833 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36116] Another function of GAM281 is therefore inhibition of Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_061197.3), a gene which functions as a receptor for capsaicin. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRPV1.

[36117] The function of TRPV1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542435.1) is another GAM281 target gene, herein designated TARGET GENE. TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TRPV1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2, designated SEQ ID:19833 and SEQ ID:16980 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36118] Another function of GAM281 is therefore inhibition of Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542435.1), a gene which functions as a receptor for capsaicin. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRPV1.

[36119] The function of TRPV1 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542437.1) is another GAM281 target gene, herein designated TARGET GENE. TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TRPV1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TRPV1 BINDING SITE1 and TRPV1 BINDING SITE2, designated SEQ ID:19833 and SEQ ID:16980 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36120] Another function of GAM281 is therefore inhibition of Transient receptor potential cation channel, subfamily v, member 1 (TRPV1, Accession NP_542437.1), a gene which functions as a receptor for capsaicin. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TRPV1.

[36121] The function of TRPV1 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM130.1.Tuberous sclerosis 1 (TSC1, Accession NP_000359.1) is another GAM281 target gene, herein designated TARGET GENE. TSC1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TSC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TSC1 BINDING SITE, designated SEQ ID:15082, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36122] Another function of GAM281 is therefore inhibition of Tuberous sclerosis 1 (TSC1, Accession NP_000359.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TSC1.

[36123] Tspy-like (TSPYL, Accession XP_166325.1) is another GAM281 target gene, herein designated TARGET GENE. TSPYL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TSPYL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of TSPYL BINDING SITE, designated SEQ ID:15042, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36124] Another function of GAM281 is therefore inhibition of Tspy-like (TSPYL, Accession XP_166325.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TSPYL.

[36125] Tetratricopeptide repeat domain 4 (TTC4, Accession NP_004614.1) is another GAM281 target gene, herein designated TARGET GENE. TTC4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TTC4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TTC4 BINDING SITE, designated SEQ ID:9587, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36126] Another function of GAM281 is therefore inhibition of Tetratricopeptide repeat domain 4 (TTC4, Accession NP_004614.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with TTC4.

[36127] TTY7 (Accession NP_114132.1) is another GAM281 target gene, herein designated TARGET GENE. TTY7 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TTY7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TTY7 BINDING SITE, designated SEQ ID:1016, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36128] Another function of GAM281 is therefore inhibition of TTY7 (Accession NP_114132.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TTY7.

[36129] TU12B1-TY (Accession NP_057659.1) is another GAM281 target gene, herein designated TARGET GENE. TU12B1-TY BINDING SITE1 through TU12B1-TY BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by TU12B1-TY, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TU12B1-TY

BINDING SITE1 through TU12B1-TY BINDING SITE3, designated SEQ ID:16036, SEQ ID:15780 and SEQ ID:4256 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36130] Another function of GAM281 is therefore inhibition of TU12B1-TY (Accession NP_057659.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TU12B1-TY.

[36131] TUCAN (Accession NP_055774.1) is another GAM281 target gene, herein designated TARGET GENE. TUCAN BINDING SITE1 through TUCAN BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by TUCAN, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TUCAN BINDING SITE1 through TUCAN BINDING SITE3, designated SEQ ID:9530, SEQ ID:7106 and SEQ ID:13395 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36132] Another function of GAM281 is therefore inhibition of TUCAN (Accession NP_055774.1) . Accordingly, utilities of

GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TUCAN.

[36133] Tuftelin 1 (TUFT1, Accession NP_064512.1) is another GAM281 target gene, herein designated TARGET GENE. TUFT1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TUFT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TUFT1 BINDING SITE, designated SEQ ID:6115, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36134] Another function of GAM281 is therefore inhibition of Tuftelin 1 (TUFT1, Accession NP_064512.1), a gene which appears to play a role in cytokinesis, cell shape, and specialized functions such as secretion and capping. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TUFT1.

[36135] The function of TUFT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.TXL-2 (Accession NP_835231.1) is another

GAM281 target gene, herein designated TARGET GENE. TXL-2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TXL-2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TXL-2 BINDING SITE, designated SEQ ID:15381, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36136] Another function of GAM281 is therefore inhibition of TXL-2 (Accession NP_835231.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TXL-2.

[36137] Thioredoxin-like 2 (TXNL2, Accession NP_006532.1) is another GAM281 target gene, herein designated TARGET GENE. TXNL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TXNL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TXNL2 BINDING SITE, designated SEQ ID:9147, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36138] Another function of GAM281 is therefore inhibition of Thioredoxin-like 2 (TXNL2, Accession NP_006532.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TXNL2.

[36139] U1SNRNPBP (Accession NP_851030.1) is another GAM281 target gene, herein designated TARGET GENE. U1SNRNPBP BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by U1SNRNPBP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of U1SNRNPBP BINDING SITE, designated SEQ ID:9590, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36140] Another function of GAM281 is therefore inhibition of U1SNRNPBP (Accession NP_851030.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with U1SNRNPBP.

[36141] U1SNRNPBP (Accession NP_851034.1) is another GAM281 target gene, herein designated TARGET GENE. U1SNRNPBP

BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by U1SNRNPBP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of U1SNRNPBP BINDING SITE, designated SEQ ID:9590, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36142] Another function of GAM281 is therefore inhibition of U1SNRNPBP (Accession NP_851034.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with U1SNRNPBP.

[36143] U1SNRNPBP (Accession NP_008951.1) is another GAM281 target gene, herein designated TARGET GENE. U1SNRNPBP BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by U1SNRNPBP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of U1SNRNPBP BINDING SITE, designated SEQ ID:9590, to the nucleotide sequence of

GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36144] Another function of GAM281 is therefore inhibition of U1SNRNPBP (Accession NP_008951.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with U1SNRNPBP.

[36145] UCK1 (Accession NP_113620.1) is another GAM281 target gene, herein designated TARGET GENE. UCK1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UCK1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UCK1 BINDING SITE, designated SEQ ID:14148, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36146] Another function of GAM281 is therefore inhibition of UCK1 (Accession NP_113620.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UCK1.

[36147] Udp-glucose dehydrogenase (UGDH, Accession NP_003350.1) is another GAM281 target gene, herein

designated TARGET GENE. UGDH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UGDH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UGDH BINDING SITE, designated SEQ ID:7909, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36148] Another function of GAM281 is therefore inhibition of Udp-glucose dehydrogenase (UGDH, Accession NP_003350.1), a gene which is an UDP- glucose dehydrogenase. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UGDH.

[36149] The function of UGDH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM69.2.Udp glycosyltransferase 1 family, polypeptide a1 (UGT1A1, Accession NP_000454.1) is another GAM281 target gene, herein designated TARGET GENE. UGT1A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UGT1A1, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UGT1A1 BINDING SITE, designated SEQ ID:10967, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36150] Another function of GAM281 is therefore inhibition of Udp glycosyltransferase 1 family, polypeptide a1 (UGT1A1, Accession NP_000454.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UGT1A1.

[36151] Udp glycosyltransferase 1 family, polypeptide a10 (UGT1A10, Accession NP_061948.1) is another GAM281 target gene, herein designated TARGET GENE. UGT1A10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UGT1A10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UGT1A10 BINDING SITE, designated SEQ ID:10967, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36152] Another function of GAM281 is therefore inhibition of Udp glycosyltransferase 1 family, polypeptide a10 (UGT1A10,

Accession NP_061948.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UGT1A10.

[36153] Udp glycosyltransferase 1 family, polypeptide a4 (UGT1A4, Accession NP_009051.1) is another GAM281 target gene, herein designated TARGET GENE. UGT1A4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UGT1A4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UGT1A4 BINDING SITE, designated SEQ ID:10967, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36154] Another function of GAM281 is therefore inhibition of Udp glycosyltransferase 1 family, polypeptide a4 (UGT1A4, Accession NP_009051.1), a gene which is of major importance in the conjugation and subsequent elimination of potentially toxic xenobiotics and endogenous compounds. and therefore may be associated with Gilbert's syndrome, crigler- najjar. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Gilbert's syndrome, crigler- najjar, and of other diseases and clinical

conditions associated with UGT1A4.

[36155] The function of UGT1A4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Udp glycosyltransferase 1 family, polypeptide a6 (UGT1A6, Accession NP_001063.1) is another GAM281 target gene, herein designated TARGET GENE. UGT1A6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UGT1A6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UGT1A6 BINDING SITE, designated SEQ ID:10967, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36156] Another function of GAM281 is therefore inhibition of Udp glycosyltransferase 1 family, polypeptide a6 (UGT1A6, Accession NP_001063.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UGT1A6.

[36157] Udp glycosyltransferase 1 family, polypeptide a8 (UGT1A8, Accession NP_061949.3) is another GAM281 target gene, herein designated TARGET GENE. UGT1A8

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UGT1A8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UGT1A8 BINDING SITE, designated SEQ ID:10967, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36158] Another function of GAM281 is therefore inhibition of Udp glycosyltransferase 1 family, polypeptide a8 (UGT1A8, Accession NP_061949.3), a gene which is of major importance in the conjugation and subsequent elimination of potentially toxic xenobiotics and endogenous compounds. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UGT1A8.

[36159] The function of UGT1A8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Udp glycosyltransferase 1 family, polypeptide a9 (UGT1A9, Accession NP_066307.1) is another GAM281 target gene, herein designated TARGET GENE. UGT1A9 BINDING SITE is a target binding site found in the

3` untranslated region of mRNA encoded by UGT1A9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UGT1A9 BINDING SITE, designated SEQ ID:10967, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36160] Another function of GAM281 is therefore inhibition of Udp glycosyltransferase 1 family, polypeptide a9 (UGT1A9, Accession NP_066307.1), a gene which is of major importance in the conjugation and subsequent elimination of potentially toxic xenobiotics and endogenous compounds. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UGT1A9.

[36161] The function of UGT1A9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Uridine monophosphate synthetase (orotate phosphoribosyl transferase and orotidine-5'-decarboxylase) (UMPS, Accession NP_000364.1) is another GAM281 target gene, herein designated TARGET GENE. UMPS BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by UMPS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UMPS BINDING SITE, designated SEQ ID:2144, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36162] Another function of GAM281 is therefore inhibition of Uridine monophosphate synthetase (orotate phosphoribosyl transferase and orotidine-5'-decarboxylase) (UMPS, Accession NP_000364.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UMPS.

[36163] Unc-84 homolog a (c. elegans) (UNC84B, Accession XP_039332.1) is another GAM281 target gene, herein designated TARGET GENE. UNC84B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by UNC84B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UNC84B BINDING SITE, designated SEQ ID:13541, to the nucleotide sequence of GAM281 RNA, herein designated

GAM RNA, also designated SEQ ID:278.

[36164] Another function of GAM281 is therefore inhibition of Unc-84 homolog a (c. elegans) (UNC84B, Accession XP_039332.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UNC84B.

[36165] Unc-84 homolog a (c. elegans) (UNC84B, Accession NP_056189.1) is another GAM281 target gene, herein designated TARGET GENE. UNC84B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by UNC84B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UNC84B BINDING SITE, designated SEQ ID:13541, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36166] Another function of GAM281 is therefore inhibition of Unc-84 homolog a (c. elegans) (UNC84B, Accession NP_056189.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UNC84B.

[36167] URG4 (Accession NP_060390.2) is another GAM281 target

gene, herein designated TARGET GENE. URG4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by URG4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of URG4 BINDING SITE, designated SEQ ID:6788, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36168] Another function of GAM281 is therefore inhibition of URG4 (Accession NP_060390.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with URG4.

[36169] Ubiquitin specific protease 22 (USP22, Accession XP_042698.2) is another GAM281 target gene, herein designated TARGET GENE. USP22 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by USP22, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of USP22 BINDING SITE, designated SEQ ID:11288, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ

ID:278.

[36170] Another function of GAM281 is therefore inhibition of Ubiquitin specific protease 22 (USP22, Accession XP_042698.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with USP22.

[36171] VDU1 (Accession NP_055832.2) is another GAM281 target gene, herein designated TARGET GENE. VDU1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VDU1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VDU1 BINDING SITE, designated SEQ ID:3187, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36172] Another function of GAM281 is therefore inhibition of VDU1 (Accession NP_055832.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VDU1.

[36173] Vent-like homeobox 2 (VENTX2, Accession NP_055283.1) is another GAM281 target gene, herein designated TARGET GENE. VENTX2 BINDING SITE is a target binding site

found in the 3` untranslated region of mRNA encoded by VENTX2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VENTX2 BINDING SITE, designated SEQ ID:19331, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36174] Another function of GAM281 is therefore inhibition of Vent-like homeobox 2 (VENTX2, Accession NP_055283.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VENTX2.

[36175] Von hippel-lindau syndrome (VHL, Accession NP_000542.1) is another GAM281 target gene, herein designated TARGET GENE. VHL BINDING SITE1 and VHL BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by VHL, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VHL BINDING SITE1 and VHL BINDING SITE2, designated SEQ ID:3873 and SEQ ID:8786 respectively, to the nucleotide sequence

of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36176] Another function of GAM281 is therefore inhibition of Von hippel-lindau syndrome (VHL, Accession NP_000542.1), a gene which may control rna stability through the selective degradation of rna- bound proteins. and therefore is associated with Von hippel- lindau disease. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Von hippel- lindau disease, and of other diseases and clinical conditions associated with VHL.

[36177] The function of VHL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Vasoactive intestinal peptide receptor 2 (VIPR2, Accession NP_003373.2) is another GAM281 target gene, herein designated TARGET GENE. VIPR2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VIPR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VIPR2 BINDING SITE, designated SEQ ID:7754, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA,

also designated SEQ ID:278.

[36178] Another function of GAM281 is therefore inhibition of Vasoactive intestinal peptide receptor 2 (VIPR2, Accession NP_003373.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VIPR2.

[36179] Vacuolar protein sorting 33a (yeast) (VPS33A, Accession NP_075067.2) is another GAM281 target gene, herein designated TARGET GENE. VPS33A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VPS33A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VPS33A BINDING SITE, designated SEQ ID:16690, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36180] Another function of GAM281 is therefore inhibition of Vacuolar protein sorting 33a (yeast) (VPS33A, Accession NP_075067.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VPS33A.

[36181] Vesicle transport through interaction with t-snares ho-

molog 1a (yeast) (VTI1A, Accession NP_660207.1) is another GAM281 target gene, herein designated TARGET GENE. VTI1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VTI1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VTI1A BINDING SITE, designated SEQ ID:2313, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36182] Another function of GAM281 is therefore inhibition of Vesicle transport through interaction with t-snares homolog 1a (yeast) (VTI1A, Accession NP_660207.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VTI1A.

[36183] Williams-beuren syndrome chromosome region 1 (WBSCR1, Accession NP_071496.1) is another GAM281 target gene, herein designated TARGET GENE. WBSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by WBSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WBSCR1 BINDING SITE, designated SEQ ID:11337, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36184] Another function of GAM281 is therefore inhibition of Williams-beuren syndrome chromosome region 1 (WBSCR1, Accession NP_071496.1), a gene which stimulates protein translation and therefore may be associated with Williams syndrome. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Williams syndrome, and of other diseases and clinical conditions associated with WBSCR1.

[36185] The function of WBSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Williams-beuren syndrome chromosome region 1 (WBSCR1, Accession NP_114381.1) is another GAM281 target gene, herein designated TARGET GENE. WBSCR1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by WBSCR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING

SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WBSCR1 BINDING SITE, designated SEQ ID:11337, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36186] Another function of GAM281 is therefore inhibition of Williams-beuren syndrome chromosome region 1 (WBSCR1, Accession NP_114381.1), a gene which stimulates protein translation and therefore may be associated with Williams syndrome. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Williams syndrome, and of other diseases and clinical conditions associated with WBSCR1.

[36187] The function of WBSCR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Williams beuren syndrome chromosome region 18 (WBSCR18, Accession NP_115693.2) is another GAM281 target gene, herein designated TARGET GENE. WBSCR18 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by WBSCR18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WBSCR18 BINDING SITE, designated SEQ ID:2152, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36188] Another function of GAM281 is therefore inhibition of Williams beuren syndrome chromosome region 18 (WBSCR18, Accession NP_115693.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WBSCR18.

[36189] Wolf-hirschhorn syndrome candidate 1 (WHSC1, Accession NP_579889.1) is another GAM281 target gene, herein designated TARGET GENE. WHSC1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by WHSC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WHSC1 BINDING SITE, designated SEQ ID:9245, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36190] Another function of GAM281 is therefore inhibition of Wolf-hirschhorn syndrome candidate 1 (WHSC1, Acces-

sion NP_579889.1), a gene which binds covalently to and repairs g/t mismatches. and therefore may be associated with Wolf- hirschhorn syndrome. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of Wolf- hirschhorn syndrome, and of other diseases and clinical conditions associated with WHSC1.

[36191] The function of WHSC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Wnt1 inducible signaling pathway protein 2 (WISP2, Accession NP_003872.1) is another GAM281 target gene, herein designated TARGET GENE. WISP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by WISP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WISP2 BINDING SITE, designated SEQ ID:6412, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36192] Another function of GAM281 is therefore inhibition of Wnt1 inducible signaling pathway protein 2 (WISP2, Accession NP_003872.1) . Accordingly, utilities of GAM281

include diagnosis, prevention and treatment of diseases and clinical conditions associated with WISP2.

[36193] X-ray repair complementing defective repair in chinese hamster cells 2 (XRCC2, Accession NP_005422.1) is another GAM281 target gene, herein designated TARGET GENE. XRCC2 BINDING SITE1 through XRCC2 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by XRCC2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of XRCC2 BINDING SITE1 through XRCC2 BINDING SITE3, designated SEQ ID:12605, SEQ ID:10148 and SEQ ID:9688 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36194] Another function of GAM281 is therefore inhibition of X-ray repair complementing defective repair in chinese hamster cells 2 (XRCC2, Accession NP_005422.1), a gene which involves in the homologous recombination repair (hrr) pathway of double- stranded dna. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with XRCC2.

[36195] The function of XRCC2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.V-yes-1 yamaguchi sarcoma viral oncogene homolog 1 (YES1, Accession NP_005424.1) is another GAM281 target gene, herein designated TARGET GENE. YES1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by YES1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of YES1 BINDING SITE, designated SEQ ID:16112, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36196] Another function of GAM281 is therefore inhibition of V-yes-1 yamaguchi sarcoma viral oncogene homolog 1 (YES1, Accession NP_005424.1), a gene which is a putative protein- tyrosine kinase. Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with YES1.

[36197] The function of YES1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM30.1.ZAK (Accession NP_598407.1) is another GAM281 target gene, herein designated TARGET GENE. ZAK BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ZAK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZAK BINDING SITE, designated SEQ ID:7294, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36198] Another function of GAM281 is therefore inhibition of ZAK (Accession NP_598407.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZAK.

[36199] ZAP (Accession NP_064504.2) is another GAM281 target gene, herein designated TARGET GENE. ZAP BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ZAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZAP BINDING SITE, designated SEQ ID:3071, to the nucleotide sequence of GAM281 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:278.

[36200] Another function of GAM281 is therefore inhibition of ZAP (Accession NP_064504.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZAP.

[36201] Z-dna binding protein 1 (ZBP1, Accession NP_110403.1) is another GAM281 target gene, herein designated TARGET GENE. ZBP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZBP1 BINDING SITE, designated SEQ ID:16276, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36202] Another function of GAM281 is therefore inhibition of Z-dna binding protein 1 (ZBP1, Accession NP_110403.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZBP1.

[36203] ZFP30 (Accession NP_055713.1) is another GAM281 target gene, herein designated TARGET GENE. ZFP30 BINDING SITE is a target binding site found in the 3` untranslated

region of mRNA encoded by ZFP30, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFP30 BINDING SITE, designated SEQ ID:9331, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36204] Another function of GAM281 is therefore inhibition of ZFP30 (Accession NP_055713.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFP30.

[36205] ZFP42 (Accession NP_777560.1) is another GAM281 target gene, herein designated TARGET GENE. ZFP42 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZFP42, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFP42 BINDING SITE, designated SEQ ID:10587, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36206] Another function of GAM281 is therefore inhibition of ZFP42 (Accession NP_777560.1) . Accordingly, utilities of

GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFP42.

[36207] Zinc finger protein 64 homolog (mouse) (ZFP64, Accession NP_060667.1) is another GAM281 target gene, herein designated TARGET GENE. ZFP64 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ZFP64, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFP64 BINDING SITE, designated SEQ ID:15043, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36208] Another function of GAM281 is therefore inhibition of Zinc finger protein 64 homolog (mouse) (ZFP64, Accession NP_060667.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFP64.

[36209] Zinc finger protein 64 homolog (mouse) (ZFP64, Accession NP_071371.2) is another GAM281 target gene, herein designated TARGET GENE. ZFP64 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ZFP64, corresponding

to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFP64 BINDING SITE, designated SEQ ID:15043, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36210] Another function of GAM281 is therefore inhibition of Zinc finger protein 64 homolog (mouse) (ZFP64, Accession NP_071371.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFP64.

[36211] ZFYVE26 (Accession XP_031077.1) is another GAM281 target gene, herein designated TARGET GENE. ZFYVE26 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZFYVE26, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZFYVE26 BINDING SITE, designated SEQ ID:12160, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36212] Another function of GAM281 is therefore inhibition of ZFYVE26 (Accession XP_031077.1) . Accordingly, utilities

of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZFYVE26.

[36213] ZMYND17 (Accession NP_848546.1) is another GAM281 target gene, herein designated TARGET GENE. ZMYND17 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZMYND17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZMYND17 BINDING SITE, designated SEQ ID:456, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36214] Another function of GAM281 is therefore inhibition of ZMYND17 (Accession NP_848546.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZMYND17.

[36215] Zinc finger protein 253 (ZNF253, Accession NP_066385.1) is another GAM281 target gene, herein designated TARGET GENE. ZNF253 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF253, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF253 BINDING SITE, designated SEQ ID:19746, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36216] Another function of GAM281 is therefore inhibition of Zinc finger protein 253 (ZNF253, Accession NP_066385.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF253.

[36217] Zinc finger protein 264 (ZNF264, Accession NP_003408.1) is another GAM281 target gene, herein designated TARGET GENE. ZNF264 BINDING SITE1 and ZNF264 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ZNF264, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF264 BINDING SITE1 and ZNF264 BINDING SITE2, designated SEQ ID:3319 and SEQ ID:9147 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36218] Another function of GAM281 is therefore inhibition of Zinc finger protein 264 (ZNF264, Accession NP_003408.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF264.

[36219] Zinc finger protein 273 (ZNF273, Accession XP_088082.1) is another GAM281 target gene, herein designated TARGET GENE. ZNF273 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF273, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF273 BINDING SITE, designated SEQ ID:18868, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36220] Another function of GAM281 is therefore inhibition of Zinc finger protein 273 (ZNF273, Accession XP_088082.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF273.

[36221] Zinc finger protein 289, id1 regulated (ZNF289, Accession NP_115765.2) is another GAM281 target gene, herein

designated TARGET GENE. ZNF289 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF289, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF289 BINDING SITE, designated SEQ ID:13159, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36222] Another function of GAM281 is therefore inhibition of Zinc finger protein 289, id1 regulated (ZNF289, Accession NP_115765.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF289.

[36223] Zinc finger protein 305 (ZNF305, Accession NP_055539.1) is another GAM281 target gene, herein designated TARGET GENE. ZNF305 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF305, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF305 BINDING SITE, designated SEQ ID:18505, to the nucleotide sequence of GAM281

RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36224] Another function of GAM281 is therefore inhibition of Zinc finger protein 305 (ZNF305, Accession NP_055539.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF305.

[36225] Zinc finger protein 334 (ZNF334, Accession NP_060572.2) is another GAM281 target gene, herein designated TARGET GENE. ZNF334 BINDING SITE1 and ZNF334 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ZNF334, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF334 BINDING SITE1 and ZNF334 BINDING SITE2, designated SEQ ID:5064 and SEQ ID:9628 respectively, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36226] Another function of GAM281 is therefore inhibition of Zinc finger protein 334 (ZNF334, Accession NP_060572.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions

associated with ZNF334.

[36227] Zinc finger protein 339 (ZNF339, Accession NP_067043.1) is another GAM281 target gene, herein designated TARGET GENE. ZNF339 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF339, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF339 BINDING SITE, designated SEQ ID:1729, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36228] Another function of GAM281 is therefore inhibition of Zinc finger protein 339 (ZNF339, Accession NP_067043.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF339.

[36229] Zinc finger protein 345 (ZNF345, Accession NP_003410.1) is another GAM281 target gene, herein designated TARGET GENE. ZNF345 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF345, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of ZNF345 BINDING SITE, designated SEQ ID:1011, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36230] Another function of GAM281 is therefore inhibition of Zinc finger protein 345 (ZNF345, Accession NP_003410.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF345.

[36231] Zinc finger protein 347 (ZNF347, Accession NP_115973.1) is another GAM281 target gene, herein designated TARGET GENE. ZNF347 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF347, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF347 BINDING SITE, designated SEQ ID:8447, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36232] Another function of GAM281 is therefore inhibition of Zinc finger protein 347 (ZNF347, Accession NP_115973.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF347.

[36233] Zinc finger protein 398 (ZNF398, Accession NP_065832.1) is another GAM281 target gene, herein designated TARGET GENE. ZNF398 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by ZNF398, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF398 BINDING SITE, designated SEQ ID:8530, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36234] Another function of GAM281 is therefore inhibition of Zinc finger protein 398 (ZNF398, Accession NP_065832.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF398.

[36235] ZNF431 (Accession XP_086098.2) is another GAM281 target gene, herein designated TARGET GENE. ZNF431 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF431, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF431

BINDING SITE, designated SEQ ID:8477, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36236] Another function of GAM281 is therefore inhibition of ZNF431 (Accession XP_086098.2) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF431.

[36237] ZNF432 (Accession NP_055465.1) is another GAM281 target gene, herein designated TARGET GENE. ZNF432 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF432, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF432 BINDING SITE, designated SEQ ID:5065, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36238] Another function of GAM281 is therefore inhibition of ZNF432 (Accession NP_055465.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF432.

[36239] ZNF440 (Accession NP_689570.1) is another GAM281 tar-

get gene, herein designated TARGET GENE. ZNF440 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF440, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF440 BINDING SITE, designated SEQ ID:1744, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36240] Another function of GAM281 is therefore inhibition of ZNF440 (Accession NP_689570.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF440.

[36241] Zinc finger protein 70 (cos17) (ZNF70, Accession NP_068735.1) is another GAM281 target gene, herein designated TARGET GENE. ZNF70 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ZNF70, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF70 BINDING SITE, designated SEQ ID:17076, to the nu-

cleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36242] Another function of GAM281 is therefore inhibition of Zinc finger protein 70 (cos17) (ZNF70, Accession NP_068735.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF70.

[36243] Zinc finger protein 70 (cos17) (ZNF70, Accession NP_852101.1) is another GAM281 target gene, herein designated TARGET GENE. ZNF70 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ZNF70, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF70 BINDING SITE, designated SEQ ID:17076, to the nucleotide sequence of GAM281 RNA, herein designated GAM RNA, also designated SEQ ID:278.

[36244] Another function of GAM281 is therefore inhibition of Zinc finger protein 70 (cos17) (ZNF70, Accession NP_852101.1) . Accordingly, utilities of GAM281 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF70.

[36245]

[36246] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 391 (GAM391), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[36247] GAM391 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM391 was detected is described hereinabove with reference to Figs. 8-15.

[36248] GAM391 gene, herein designated GAM GENE, and GAM391 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[36249] GAM391 gene encodes a GAM391 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM391 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM391 precursor RNA is designated SEQ ID:199, and is provided hereinbelow with reference to the sequence listing part.

[36250] GAM391 precursor RNA folds onto itself, forming GAM391

folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[36251] GAM391 precursor RNA folds onto itself, forming GAM391 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[36252] Nucleotide sequence of GAM391 precursor RNA, designated SEQ-ID: 199, and a schematic representation of a predicted secondary folding of GAM391 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[36253] An enzyme complex designated DICER COMPLEX, `dices`

the GAM391 folded precursor RNA into GAM391 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: C) nucleotide sequence of GAM391 RNA is designated SEQ ID:326, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[36254] GAM391 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM391 target RNA, herein designated GAM TARGET RNA. GAM391 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[36255] GAM391 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM391 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM391

RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM391 RNA may have a different number of target binding sites in untranslated regions of a GAM391 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[36256] The complementary binding of GAM391 RNA, herein designated GAM RNA, to target binding sites on GAM391 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM391 target RNA into GAM391 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[36257] It is appreciated that GAM391 target gene, herein designated TARGET GENE, in fact represents a plurality of

GAM391 target genes. The mRNA of each one of this plurality of GAM391 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM391 RNA, herein designated GAM RNA, and which when bound by GAM391 RNA causes inhibition of translation of respective one or more GAM391 target proteins.

[36258] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM391 gene, herein designated GAM GENE, on one or more GAM391 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[36259] It is appreciated that specific functions and accordingly utilities of GAM391 correlate with, and may be deduced from, the identity of the target genes which GAM391 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[36260]

[36261]

[36262] 5'OY11.1 (Accession NP_542942.1) is a GAM391 target gene, herein designated TARGET GENE. 5'OY11.1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by 5'OY11.1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of 5'OY11.1 BINDING SITE, designated SEQ ID:5923, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36263] A function of GAM391 is therefore inhibition of 5'OY11.1 (Accession NP_542942.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with 5'OY11.1.

[36264] APBB3 (Accession NP_573422.1) is another GAM391 target

gene, herein designated TARGET GENE. APBB3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APBB3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APBB3 BINDING SITE, designated SEQ ID:539, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36265] Another function of GAM391 is therefore inhibition of APBB3 (Accession NP_573422.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APBB3.

[36266] APBB3 (Accession NP_573421.1) is another GAM391 target gene, herein designated TARGET GENE. APBB3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APBB3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APBB3 BINDING SITE, designated SEQ ID:539, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36267] Another function of GAM391 is therefore inhibition of APBB3 (Accession NP_573421.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APBB3.

[36268] Amyloid beta precursor protein (cytoplasmic tail) binding protein 2 (APPBP2, Accession NP_006371.2) is another GAM391 target gene, herein designated TARGET GENE. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APPBP2 BINDING SITE, designated SEQ ID:1844, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36269] Another function of GAM391 is therefore inhibition of Amyloid beta precursor protein (cytoplasmic tail) binding protein 2 (APPBP2, Accession NP_006371.2), a gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore may be associated with Alzheimer's disease. Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of Alzheimer's disease, and of other diseases and clinical conditions as-

sociated with APPBP2.

[36270] The function of APPBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Ankyrin repeat and socs box-containing 1 (ASB1, Accession NP_057198.1) is another GAM391 target gene, herein designated TARGET GENE. ASB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ASB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASB1 BINDING SITE, designated SEQ ID:11800, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36271] Another function of GAM391 is therefore inhibition of Ankyrin repeat and socs box-containing 1 (ASB1, Accession NP_057198.1), a gene which May mediate protein-protein interactions. Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASB1.

[36272] The function of ASB1 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM47.1.Atpase, class i, type 8b, member 2 (ATP8B2, Accession XP_290875.1) is another GAM391 target gene, herein designated TARGET GENE. ATP8B2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ATP8B2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP8B2 BINDING SITE, designated SEQ ID:11976, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36273] Another function of GAM391 is therefore inhibition of Atpase, class i, type 8b, member 2 (ATP8B2, Accession XP_290875.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP8B2.

[36274] Axotrophin (AXOT, Accession NP_073737.1) is another GAM391 target gene, herein designated TARGET GENE. AXOT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AXOT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of AXOT BINDING SITE, designated SEQ ID:3201, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36275] Another function of GAM391 is therefore inhibition of Axotrophin (AXOT, Accession NP_073737.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AXOT.

[36276] C14orf78 (Accession XP_290629.1) is another GAM391 target gene, herein designated TARGET GENE. C14orf78 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by C14orf78, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf78 BINDING SITE, designated SEQ ID:3928, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36277] Another function of GAM391 is therefore inhibition of C14orf78 (Accession XP_290629.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

C14orf78.

[36278] Chromosome 1 open reading frame 24 (C1orf24, Accession NP_071366.1) is another GAM391 target gene, herein designated TARGET GENE. C1orf24 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by C1orf24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1orf24 BINDING SITE, designated SEQ ID:1181, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36279] Another function of GAM391 is therefore inhibition of Chromosome 1 open reading frame 24 (C1orf24, Accession NP_071366.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf24.

[36280] Chromosome 1 open reading frame 24 (C1orf24, Accession NP_443198.1) is another GAM391 target gene, herein designated TARGET GENE. C1orf24 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by C1orf24, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1orf24 BINDING SITE, designated SEQ ID:1181, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36281] Another function of GAM391 is therefore inhibition of Chromosome 1 open reading frame 24 (C1orf24, Accession NP_443198.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf24.

[36282] Chromosome 21 open reading frame 82 (C21orf82, Accession NP_715632.1) is another GAM391 target gene, herein designated TARGET GENE. C21orf82 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C21orf82, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C21orf82 BINDING SITE, designated SEQ ID:5611, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36283] Another function of GAM391 is therefore inhibition of Chromosome 21 open reading frame 82 (C21orf82, Ac-

cession NP_715632.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C21orf82.

[36284] Reserved (C8orf6, Accession NP_663631.1) is another GAM391 target gene, herein designated TARGET GENE. C8orf6 BINDING SITE1 and C8orf6 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by C8orf6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C8orf6 BINDING SITE1 and C8orf6 BINDING SITE2, designated SEQ ID:6819 and SEQ ID:16546 respectively, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36285] Another function of GAM391 is therefore inhibition of Reserved (C8orf6, Accession NP_663631.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C8orf6.

[36286] Chromosome 9 open reading frame 25 (C9orf25, Accession NP_671735.1) is another GAM391 target gene, herein designated TARGET GENE. C9orf25 BINDING SITE is a tar-

get binding site found in the 3` untranslated region of mRNA encoded by C9orf25, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C9orf25 BINDING SITE, designated SEQ ID:2377, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36287] Another function of GAM391 is therefore inhibition of Chromosome 9 open reading frame 25 (C9orf25, Accession NP_671735.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C9orf25.

[36288] Chemokine (c-c motif) receptor 2 (CCR2, Accession NP_000638.1) is another GAM391 target gene, herein designated TARGET GENE. CCR2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CCR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCR2 BINDING SITE, designated SEQ ID:9391, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA,

also designated SEQ ID:326.

[36289] Another function of GAM391 is therefore inhibition of Chemokine (c-c motif) receptor 2 (CCR2, Accession NP_000638.1), a gene which binds chemokines and transduces a signal by increasing the intracellular calcium ions level. and therefore may be associated with Hiv- 1 infection. Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of Hiv- 1 infection, and of other diseases and clinical conditions associated with CCR2.

[36290] The function of CCR2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM175.1.Cat eye syndrome chromosome region, candidate 6 (CECR6, Accession NP_114096.1) is another GAM391 target gene, herein designated TARGET GENE. CECR6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CECR6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CECR6 BINDING SITE, designated SEQ ID:1794, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36291] Another function of GAM391 is therefore inhibition of Cat eye syndrome chromosome region, candidate 6 (CECR6, Accession NP_114096.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CECR6.

[36292] Centaurin, delta 2 (CENTD2, Accession NP_056057.1) is another GAM391 target gene, herein designated TARGET GENE. CENTD2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CENTD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CENTD2 BINDING SITE, designated SEQ ID:12112, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36293] Another function of GAM391 is therefore inhibition of Centaurin, delta 2 (CENTD2, Accession NP_056057.1), a gene which involved in cell signaling/communication. Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CENTD2.

[36294] The function of CENTD2 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM51.1.CGI-127 (Accession NP_057145.1) is another GAM391 target gene, herein designated TARGET GENE. CGI-127 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CGI-127, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CGI-127 BINDING SITE, designated SEQ ID:16833, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36295] Another function of GAM391 is therefore inhibition of CGI-127 (Accession NP_057145.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CGI-127.

[36296] Calcium homeostasis endoplasmic reticulum protein (CHERP, Accession NP_006378.2) is another GAM391 target gene, herein designated TARGET GENE. CHERP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CHERP, corresponding to a target binding site such as BINDING SITE I, BINDING

SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CHERP BINDING SITE, designated SEQ ID:18403, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36297] Another function of GAM391 is therefore inhibition of Calcium homeostasis endoplasmic reticulum protein (CHERP, Accession NP_006378.2) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHERP.

[36298] Cholinergic receptor, nicotinic, beta polypeptide 4 (CHRNB4, Accession NP_000741.1) is another GAM391 target gene, herein designated TARGET GENE. CHRNB4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CHRNB4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CHRNB4 BINDING SITE, designated SEQ ID:20038, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36299] Another function of GAM391 is therefore inhibition of Cholinergic receptor, nicotinic, beta polypeptide 4

(CHRNB4, Accession NP_000741.1), a gene which mediates fast signal transmission at synapses. Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHRNB4.

[36300] The function of CHRNB4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM76.1.Dab2 interacting protein (DAB2IP, Accession NP_115941.1) is another GAM391 target gene, herein designated TARGET GENE. DAB2IP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DAB2IP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DAB2IP BINDING SITE, designated SEQ ID:8058, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36301] Another function of GAM391 is therefore inhibition of Dab2 interacting protein (DAB2IP, Accession NP_115941.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DAB2IP.

[36302] Damage-specific dna binding protein 1, 127kda (DDB1, Accession NP_001914.2) is another GAM391 target gene, herein designated TARGET GENE. DDB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DDB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DDB1 BINDING SITE, designated SEQ ID:4279, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36303] Another function of GAM391 is therefore inhibition of Damage-specific dna binding protein 1, 127kda (DDB1, Accession NP_001914.2) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DDB1.

[36304] DKFZP434O047 (Accession NP_056409.1) is another GAM391 target gene, herein designated TARGET GENE. DKFZP434O047 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZP434O047, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of DKFZP434O047 BINDING SITE, designated SEQ ID:13168, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36305] Another function of GAM391 is therefore inhibition of DKFZP434O047 (Accession NP_056409.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434O047.

[36306] DKFZP434P211 (Accession NP_055364.1) is another GAM391 target gene, herein designated TARGET GENE. DKFZP434P211 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP434P211, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434P211 BINDING SITE, designated SEQ ID:7211, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36307] Another function of GAM391 is therefore inhibition of DKFZP434P211 (Accession NP_055364.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with DKFZP434P211.

[36308] E2f transcription factor 3 (E2F3, Accession NP_001940.1) is another GAM391 target gene, herein designated TARGET GENE. E2F3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by E2F3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of E2F3 BINDING SITE, designated SEQ ID:16925, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36309] Another function of GAM391 is therefore inhibition of E2f transcription factor 3 (E2F3, Accession NP_001940.1), a gene which binds dna and controls cell- cycle progression from g1 to s phase. and therefore may be associated with Hereditary autosomal dominant myoclonus dystonia. Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of Hereditary autosomal dominant myoclonus dystonia, and of other diseases and clinical conditions associated with E2F3.

[36310] The function of E2F3 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM44.1.Erythrocyte membrane protein band 4.1 like 4b (EPB41L4B, Accession NP_060894.1) is another GAM391 target gene, herein designated TARGET GENE. EPB41L4B BINDING SITE1 and EPB41L4B BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by EPB41L4B, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EPB41L4B BINDING SITE1 and EPB41L4B BINDING SITE2, designated SEQ ID:16985 and SEQ ID:5606 respectively, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36311] Another function of GAM391 is therefore inhibition of Erythrocyte membrane protein band 4.1 like 4b (EPB41L4B, Accession NP_060894.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EPB41L4B.

[36312] Ellis van creveld syndrome (EVC, Accession NP_714928.1) is another GAM391 target gene, herein designated TARGET GENE. EVC BINDING SITE1 and EVC BINDING SITE2 are target binding sites found in untranslated regions of mul-

tiple transcripts of mRNA encoded by EVC, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EVC BINDING SITE1 and EVC BINDING SITE2, designated SEQ ID:8983 and SEQ ID:672 respectively, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36313] Another function of GAM391 is therefore inhibition of Ellis van creveld syndrome (EVC, Accession NP_714928.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EVC.

[36314] FLJ10350 (Accession NP_060537.2) is another GAM391 target gene, herein designated TARGET GENE. FLJ10350 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10350, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10350 BINDING SITE, designated SEQ ID:5633, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36315] Another function of GAM391 is therefore inhibition of FLJ10350 (Accession NP_060537.2) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10350.

[36316] FLJ10702 (Accession NP_060654.1) is another GAM391 target gene, herein designated TARGET GENE. FLJ10702 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10702, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10702 BINDING SITE, designated SEQ ID:3052, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36317] Another function of GAM391 is therefore inhibition of FLJ10702 (Accession NP_060654.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10702.

[36318] FLJ12409 (Accession NP_079381.1) is another GAM391 target gene, herein designated TARGET GENE. FLJ12409 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by FLJ12409, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12409 BINDING SITE, designated SEQ ID:3246, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36319] Another function of GAM391 is therefore inhibition of FLJ12409 (Accession NP_079381.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12409.

[36320] FLJ14260 (Accession NP_079303.2) is another GAM391 target gene, herein designated TARGET GENE. FLJ14260 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ14260, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14260 BINDING SITE, designated SEQ ID:17291, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36321] Another function of GAM391 is therefore inhibition of

FLJ14260 (Accession NP_079303.2) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14260.

[36322] FLJ20275 (Accession NP_060207.1) is another GAM391 target gene, herein designated TARGET GENE. FLJ20275 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20275, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20275 BINDING SITE, designated SEQ ID:518, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36323] Another function of GAM391 is therefore inhibition of FLJ20275 (Accession NP_060207.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20275.

[36324] FLJ39005 (Accession NP_848616.1) is another GAM391 target gene, herein designated TARGET GENE. FLJ39005 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ39005, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39005 BINDING SITE, designated SEQ ID:3674, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36325] Another function of GAM391 is therefore inhibition of FLJ39005 (Accession NP_848616.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39005.

[36326] Forkhead box m1 (FOXM1, Accession NP_068772.1) is another GAM391 target gene, herein designated TARGET GENE. FOXM1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOXM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FOXM1 BINDING SITE, designated SEQ ID:11174, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36327] Another function of GAM391 is therefore inhibition of

Forkhead box m1 (FOXM1, Accession NP_068772.1), a gene which may play a role in the control of cell proliferation. Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FOXM1.

[36328] The function of FOXM1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM116.1.Forkhead box p1 (FOXP1, Accession NP_116071.2) is another GAM391 target gene, herein designated TARGET GENE. FOXP1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FOXP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FOXP1 BINDING SITE, designated SEQ ID:4841, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36329] Another function of GAM391 is therefore inhibition of Forkhead box p1 (FOXP1, Accession NP_116071.2) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FOXP1.

[36330] GALNACT-2 (Accession NP_061060.3) is another GAM391 target gene, herein designated TARGET GENE. GALNACT-2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GALNACT-2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GALNACT-2 BINDING SITE, designated SEQ ID:11066, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36331] Another function of GAM391 is therefore inhibition of GALNACT-2 (Accession NP_061060.3) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GALNACT-2.

[36332] Gata binding protein 2 (GATA2, Accession NP_116027.2) is another GAM391 target gene, herein designated TARGET GENE. GATA2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GATA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GATA2 BINDING SITE, designated

SEQ ID:12989, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36333] Another function of GAM391 is therefore inhibition of Gata binding protein 2 (GATA2, Accession NP_116027.2) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GATA2.

[36334] GEMIN7 (Accession NP_078983.1) is another GAM391 target gene, herein designated TARGET GENE. GEMIN7 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GEMIN7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GEMIN7 BINDING SITE, designated SEQ ID:6579, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36335] Another function of GAM391 is therefore inhibition of GEMIN7 (Accession NP_078983.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GEMIN7.

[36336] Glutamate receptor, ionotropic, n-methyl d-aspartate 2b (GRIN2B, Accession NP_000825.1) is another GAM391 target gene, herein designated TARGET GENE. GRIN2B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GRIN2B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRIN2B BINDING SITE, designated SEQ ID:14110, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36337] Another function of GAM391 is therefore inhibition of Glutamate receptor, ionotropic, n-methyl d-aspartate 2b (GRIN2B, Accession NP_000825.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRIN2B.

[36338] Hairy/enhancer-of-split related with yrpw motif-like (HEYL, Accession NP_055386.1) is another GAM391 target gene, herein designated TARGET GENE. HEYL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HEYL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HEYL BINDING SITE, designated SEQ ID:11546, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36339] Another function of GAM391 is therefore inhibition of Hairy/enhancer-of-split related with yrpw motif-like (HEYL, Accession NP_055386.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HEYL.

[36340] Indolethylamine n-methyltransferase (INMT, Accession NP_006765.3) is another GAM391 target gene, herein designated TARGET GENE. INMT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by INMT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of INMT BINDING SITE, designated SEQ ID:9915, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36341] Another function of GAM391 is therefore inhibition of Indolethylamine n-methyltransferase (INMT, Accession NP_006765.3) . Accordingly, utilities of GAM391 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with INMT.

[36342] Jumonji homolog (mouse) (JMJ, Accession NP_004964.2) is another GAM391 target gene, herein designated TARGET GENE. JMJ BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by JMJ, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of JMJ BINDING SITE, designated SEQ ID:2359, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36343] Another function of GAM391 is therefore inhibition of Jumonji homolog (mouse) (JMJ, Accession NP_004964.2), a gene which participates in the negative regulation of cell growth. Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with JMJ.

[36344] The function of JMJ and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Potassium voltage-gated channel, shaker-related subfamily, member 5 (KCNA5, Accession

NP_002225.2) is another GAM391 target gene, herein designated TARGET GENE. KCNA5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KCNA5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNA5 BINDING SITE, designated SEQ ID:3000, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36345] Another function of GAM391 is therefore inhibition of Potassium voltage-gated channel, shaker-related subfamily, member 5 (KCNA5, Accession NP_002225.2), a gene which mediates the voltage- dependent potassium ion permeability of excitable membranes. Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNA5.

[36346] The function of KCNA5 has been established by previous studies. Potassium channels play an important role in the regulation of pancreatic beta cells in response to glucose and the sulfonylurea oral hypoglycemic agents. Philipson et al. (1991) used a rat brain potassium channel probe to screen a human insulinoma cDNA library for clones en-

coding voltage- gated potassium channels. They isolated a series of cDNA clones which were then used to isolate and sequence a potassium channel gene, designated PCN1. Microinjection of synthetic RNA encoding PCN1 was accomplished in order to determine the electrophysiologic characteristics of the protein. These experiments demonstrated that the PCN1 potassium channel has the electrophysiologic characteristics of delayed- rectifier type channels. Tamkun et al. (1991) isolated human heart cDNAs encoding PCN1, which they called HK2, and HK1 (KCNA4; 176266). They reported that the predicted 605- amino acid HK2 protein shares the characteristics of voltage-gated potassium channels, with 6 potential membrane-spanning domains and a positively charged region in the fourth membrane- spanning domain. Northern blot analysis revealed that HK2 is expressed as a major 2.5- and a minor 1.5- kb mRNA in human atrium and ventricle. By study of somatic cell hybrids, McPherson et al. (1991) mapped a Shaker- related potassium voltage- gated channel gene to chromosome 12. Designated here KCNA5, the gene was identified with probe Kv1 from the rat. By multipoint linkage analysis of 8 CEPH families, Phromchotikul et al. (1993) mapped the KCNA5 gene to

12p and determined its position relative to 4 DNA markers. Using interspecific backcrosses between Mus musculus and Mus spretus, Klocke et al. (1993) mapped the Kcna5 gene to a cluster with the Kcna1 and Kcna6 (OMIM Ref. No. 176257) genes and the mouse homolog of TPI1 (OMIM Ref. No. 190450). Since TPI1 is located on band 12p13 in the human, the 3 K(+)- channel genes was predicted to be in the same band. Curran et al. (1992) mapped the KCNA5 gene, which they erroneously referred to as the KCNA1 gene, to chromosome 12 by use of human- rodent somatic cell panels and narrowed the localization to the distal short arm by in situ hybridization. Linkage studies had shown a maximum lod score of 2.72 at a recombination fraction of 0.05 between KCNA5 and the von Willebrand locus (VWF; 193400). Albrecht et al. (1995) determined that a 300- kb cluster on chromosome 12p13 contains the human KCNA6, KCNA1, and KCNA5 genes arranged in tandem

[36347]

[36348] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[36349] Albrecht, B.; Weber, K.; Pongs, O. : Characterization of a

voltage- activated K- channel gene cluster on human chromosome 12p13. Receptors Channels 3: 213- 220, 1995. ; and

[36350] Curran, M. E.; Landes, G. M.; Keating, M. T. : Molecular cloning, characterization, and genomic localization of a human potassium channel gene. Genomics 12: 729- 737, 1992.

[36351] Further studies establishing the function and utilities of KCNA5 are found in John Hopkins OMIM database record ID 176267, and in cited publications listed in Table 5, which are hereby incorporated by reference.KIAA0276 (Accession XP_048199.1) is another GAM391 target gene, herein designated TARGET GENE. KIAA0276 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0276, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0276 BINDING SITE, designated SEQ ID:13253, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36352] Another function of GAM391 is therefore inhibition of KIAA0276 (Accession XP_048199.1) . Accordingly, utilities

of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0276.

[36353] KIAA0376 (Accession XP_037759.2) is another GAM391 target gene, herein designated TARGET GENE. KIAA0376 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0376, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0376 BINDING SITE, designated SEQ ID:5037, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36354] Another function of GAM391 is therefore inhibition of KIAA0376 (Accession XP_037759.2) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0376.

[36355] KIAA0773 (Accession NP_055505.1) is another GAM391 target gene, herein designated TARGET GENE. KIAA0773 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0773, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0773 BINDING SITE, designated SEQ ID:7493, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36356] Another function of GAM391 is therefore inhibition of KIAA0773 (Accession NP_055505.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0773.

[36357] KIAA0937 (Accession XP_166213.1) is another GAM391 target gene, herein designated TARGET GENE. KIAA0937 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0937, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0937 BINDING SITE, designated SEQ ID:11761, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36358] Another function of GAM391 is therefore inhibition of KIAA0937 (Accession XP_166213.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with KIAA0937.

[36359] KIAA1462 (Accession XP_166132.1) is another GAM391 target gene, herein designated TARGET GENE. KIAA1462 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1462, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1462 BINDING SITE, designated SEQ ID:16373, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36360] Another function of GAM391 is therefore inhibition of KIAA1462 (Accession XP_166132.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1462.

[36361] KIAA1951 (Accession XP_057401.1) is another GAM391 target gene, herein designated TARGET GENE. KIAA1951 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1951, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of KIAA1951 BINDING SITE, designated SEQ ID:13357, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36362] Another function of GAM391 is therefore inhibition of KIAA1951 (Accession XP_057401.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1951.

[36363] KIFC2 (Accession NP_665697.1) is another GAM391 target gene, herein designated TARGET GENE. KIFC2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIFC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIFC2 BINDING SITE, designated SEQ ID:6714, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36364] Another function of GAM391 is therefore inhibition of KIFC2 (Accession NP_665697.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIFC2.

[36365] Kringle containing transmembrane protein 1 (KREMEN1, Accession NP_114434.3) is another GAM391 target gene, herein designated TARGET GENE. KREMEN1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KREMEN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KREMEN1 BINDING SITE, designated SEQ ID:7291, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36366] Another function of GAM391 is therefore inhibition of Kringle containing transmembrane protein 1 (KREMEN1, Accession NP_114434.3) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KREMEN1.

[36367] Lim domain binding 3 (LDB3, Accession XP_084376.6) is another GAM391 target gene, herein designated TARGET GENE. LDB3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LDB3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of LDB3 BINDING SITE, designated SEQ ID:2117, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36368] Another function of GAM391 is therefore inhibition of Lim domain binding 3 (LDB3, Accession XP_084376.6), a gene which could play a role during mating. Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LDB3.

[36369] The function of LDB3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1.LOC125061 (Accession XP_058889.3) is another GAM391 target gene, herein designated TARGET GENE. LOC125061 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC125061, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC125061 BINDING SITE, designated SEQ ID:19284, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36370] Another function of GAM391 is therefore inhibition of LOC125061 (Accession XP_058889.3) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC125061.

[36371] LOC139201 (Accession XP_208439.1) is another GAM391 target gene, herein designated TARGET GENE. LOC139201 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC139201, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC139201 BINDING SITE, designated SEQ ID:11240, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36372] Another function of GAM391 is therefore inhibition of LOC139201 (Accession XP_208439.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC139201.

[36373] LOC143310 (Accession XP_084485.1) is another GAM391 target gene, herein designated TARGET GENE. LOC143310 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC143310, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC143310 BINDING SITE, designated SEQ ID:12539, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36374] Another function of GAM391 is therefore inhibition of LOC143310 (Accession XP_084485.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC143310.

[36375] LOC145660 (Accession XP_085200.1) is another GAM391 target gene, herein designated TARGET GENE. LOC145660 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC145660, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145660 BINDING SITE, designated SEQ ID:10556, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36376] Another function of GAM391 is therefore inhibition of

LOC145660 (Accession XP_085200.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145660.

[36377] LOC145820 (Accession XP_085246.1) is another GAM391 target gene, herein designated TARGET GENE. LOC145820 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC145820, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC145820 BINDING SITE, designated SEQ ID:1993, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36378] Another function of GAM391 is therefore inhibition of LOC145820 (Accession XP_085246.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC145820.

[36379] LOC146243 (Accession XP_096956.1) is another GAM391 target gene, herein designated TARGET GENE. LOC146243 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146243, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146243 BINDING SITE, designated SEQ ID:11896, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36380] Another function of GAM391 is therefore inhibition of LOC146243 (Accession XP_096956.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146243.

[36381] LOC146517 (Accession XP_085491.1) is another GAM391 target gene, herein designated TARGET GENE. LOC146517 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146517, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146517 BINDING SITE, designated SEQ ID:18098, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36382] Another function of GAM391 is therefore inhibition of LOC146517 (Accession XP_085491.1) . Accordingly, utili-

ties of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146517.

[36383] LOC148709 (Accession XP_086281.1) is another GAM391 target gene, herein designated TARGET GENE. LOC148709 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC148709, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148709 BINDING SITE, designated SEQ ID:17147, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36384] Another function of GAM391 is therefore inhibition of LOC148709 (Accession XP_086281.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC148709.

[36385] LOC150174 (Accession XP_086802.2) is another GAM391 target gene, herein designated TARGET GENE. LOC150174 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150174, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150174 BINDING SITE, designated SEQ ID:7211, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36386] Another function of GAM391 is therefore inhibition of LOC150174 (Accession XP_086802.2) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150174.

[36387] LOC150213 (Accession XP_059324.1) is another GAM391 target gene, herein designated TARGET GENE. LOC150213 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150213, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150213 BINDING SITE, designated SEQ ID:7211, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36388] Another function of GAM391 is therefore inhibition of LOC150213 (Accession XP_059324.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC150213.

[36389] LOC151068 (Accession XP_098000.1) is another GAM391 target gene, herein designated TARGET GENE. LOC151068 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC151068, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151068 BINDING SITE, designated SEQ ID:6116, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36390] Another function of GAM391 is therefore inhibition of LOC151068 (Accession XP_098000.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151068.

[36391] LOC151124 (Accession XP_098006.1) is another GAM391 target gene, herein designated TARGET GENE. LOC151124 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC151124, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC151124 BINDING SITE, designated SEQ ID:6464, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36392] Another function of GAM391 is therefore inhibition of LOC151124 (Accession XP_098006.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151124.

[36393] LOC151877 (Accession XP_098132.1) is another GAM391 target gene, herein designated TARGET GENE. LOC151877 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC151877, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151877 BINDING SITE, designated SEQ ID:9078, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36394] Another function of GAM391 is therefore inhibition of LOC151877 (Accession XP_098132.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC151877.

[36395] LOC157531 (Accession XP_212210.1) is another GAM391 target gene, herein designated TARGET GENE. LOC157531 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by LOC157531, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157531 BINDING SITE, designated SEQ ID:9551, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36396] Another function of GAM391 is therefore inhibition of LOC157531 (Accession XP_212210.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157531.

[36397] LOC196988 (Accession XP_113795.1) is another GAM391 target gene, herein designated TARGET GENE. LOC196988 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC196988, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC196988 BINDING SITE, designated SEQ ID:19127, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36398] Another function of GAM391 is therefore inhibition of LOC196988 (Accession XP_113795.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC196988.

[36399] LOC199718 (Accession XP_113998.1) is another GAM391 target gene, herein designated TARGET GENE. LOC199718 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC199718, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC199718 BINDING SITE, designated SEQ ID:10043, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36400] Another function of GAM391 is therefore inhibition of LOC199718 (Accession XP_113998.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC199718.

[36401] LOC200225 (Accession XP_117206.2) is another GAM391 target gene, herein designated TARGET GENE. LOC200225 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC200225, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200225 BINDING SITE, designated SEQ ID:12207, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36402] Another function of GAM391 is therefore inhibition of LOC200225 (Accession XP_117206.2) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200225.

[36403] LOC221922 (Accession XP_166555.2) is another GAM391 target gene, herein designated TARGET GENE. LOC221922 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC221922, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC221922 BINDING SITE, designated SEQ ID:14906, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36404] Another function of GAM391 is therefore inhibition of LOC221922 (Accession XP_166555.2) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221922.

[36405] LOC254099 (Accession XP_173023.1) is another GAM391 target gene, herein designated TARGET GENE. LOC254099 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC254099, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC254099 BINDING SITE, designated SEQ ID:1936, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36406] Another function of GAM391 is therefore inhibition of LOC254099 (Accession XP_173023.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC254099.

[36407] LOC283030 (Accession XP_210858.1) is another GAM391 target gene, herein designated TARGET GENE. LOC283030 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283030, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283030 BINDING SITE, designated SEQ ID:19606, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36408] Another function of GAM391 is therefore inhibition of LOC283030 (Accession XP_210858.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283030.

[36409] LOC283049 (Accession XP_210868.1) is another GAM391 target gene, herein designated TARGET GENE. LOC283049 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283049, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283049 BINDING SITE, designated SEQ ID:7277, to

the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36410] Another function of GAM391 is therefore inhibition of LOC283049 (Accession XP_210868.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283049.

[36411] LOC283530 (Accession XP_211079.1) is another GAM391 target gene, herein designated TARGET GENE. LOC283530 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283530, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283530 BINDING SITE, designated SEQ ID:9689, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36412] Another function of GAM391 is therefore inhibition of LOC283530 (Accession XP_211079.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283530.

[36413] LOC283624 (Accession XP_211126.1) is another GAM391

target gene, herein designated TARGET GENE. LOC283624 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283624, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283624 BINDING SITE, designated SEQ ID:480, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36414] Another function of GAM391 is therefore inhibition of LOC283624 (Accession XP_211126.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283624.

[36415] LOC284167 (Accession XP_208171.1) is another GAM391 target gene, herein designated TARGET GENE. LOC284167 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284167, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284167 BINDING SITE, designated SEQ ID:6945, to the nucleotide sequence of GAM391 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:326.

[36416] Another function of GAM391 is therefore inhibition of LOC284167 (Accession XP_208171.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284167.

[36417] LOC284313 (Accession XP_209116.1) is another GAM391 target gene, herein designated TARGET GENE. LOC284313 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284313, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284313 BINDING SITE, designated SEQ ID:3674, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36418] Another function of GAM391 is therefore inhibition of LOC284313 (Accession XP_209116.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284313.

[36419] LOC284591 (Accession XP_211529.1) is another GAM391 target gene, herein designated TARGET GENE. LOC284591

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284591, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284591 BINDING SITE, designated SEQ ID:19633, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36420] Another function of GAM391 is therefore inhibition of LOC284591 (Accession XP_211529.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284591.

[36421] LOC284791 (Accession XP_211633.1) is another GAM391 target gene, herein designated TARGET GENE. LOC284791 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284791, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284791 BINDING SITE, designated SEQ ID:11856, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36422] Another function of GAM391 is therefore inhibition of LOC284791 (Accession XP_211633.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284791.

[36423] LOC285043 (Accession XP_211742.1) is another GAM391 target gene, herein designated TARGET GENE. LOC285043 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285043, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285043 BINDING SITE, designated SEQ ID:1586, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36424] Another function of GAM391 is therefore inhibition of LOC285043 (Accession XP_211742.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285043.

[36425] LOC285151 (Accession XP_211782.1) is another GAM391 target gene, herein designated TARGET GENE. LOC285151 BINDING SITE is a target binding site found in the 5` un-

translated region of mRNA encoded by LOC285151, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285151 BINDING SITE, designated SEQ ID:9288, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36426] Another function of GAM391 is therefore inhibition of LOC285151 (Accession XP_211782.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285151.

[36427] LOC285452 (Accession XP_209615.1) is another GAM391 target gene, herein designated TARGET GENE. LOC285452 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285452, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285452 BINDING SITE, designated SEQ ID:14330, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36428] Another function of GAM391 is therefore inhibition of

LOC285452 (Accession XP_209615.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285452.

[36429] LOC285687 (Accession XP_211985.1) is another GAM391 target gene, herein designated TARGET GENE. LOC285687 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285687, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285687 BINDING SITE, designated SEQ ID:15156, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36430] Another function of GAM391 is therefore inhibition of LOC285687 (Accession XP_211985.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285687.

[36431] LOC285996 (Accession XP_212128.1) is another GAM391 target gene, herein designated TARGET GENE. LOC285996 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285996, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285996 BINDING SITE, designated SEQ ID:8402, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36432] Another function of GAM391 is therefore inhibition of LOC285996 (Accession XP_212128.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285996.

[36433] LOC286220 (Accession XP_209954.1) is another GAM391 target gene, herein designated TARGET GENE. LOC286220 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286220, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286220 BINDING SITE, designated SEQ ID:1222, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36434] Another function of GAM391 is therefore inhibition of LOC286220 (Accession XP_209954.1) . Accordingly, utili-

ties of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286220.

[36435] LOC286372 (Accession XP_212294.1) is another GAM391 target gene, herein designated TARGET GENE. LOC286372 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286372, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286372 BINDING SITE, designated SEQ ID:16638, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36436] Another function of GAM391 is therefore inhibition of LOC286372 (Accession XP_212294.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286372.

[36437] LOC339568 (Accession XP_295008.1) is another GAM391 target gene, herein designated TARGET GENE. LOC339568 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339568, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339568 BINDING SITE, designated SEQ ID:12947, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36438] Another function of GAM391 is therefore inhibition of LOC339568 (Accession XP_295008.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339568.

[36439] LOC340731 (Accession XP_291690.2) is another GAM391 target gene, herein designated TARGET GENE. LOC340731 BINDING SITE1 through LOC340731 BINDING SITE5 are target binding sites found in untranslated regions of mRNA encoded by LOC340731, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340731 BINDING SITE1 through LOC340731 BINDING SITE5, designated SEQ ID:6111, SEQ ID:9019, SEQ ID:17313, SEQ ID:10106 and SEQ ID:1668 respectively, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36440] Another function of GAM391 is therefore inhibition of LOC340731 (Accession XP_291690.2) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340731.

[36441] LOC348461 (Accession XP_302764.1) is another GAM391 target gene, herein designated TARGET GENE. LOC348461 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348461, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348461 BINDING SITE, designated SEQ ID:13888, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36442] Another function of GAM391 is therefore inhibition of LOC348461 (Accession XP_302764.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348461.

[36443] LOC349408 (Accession XP_303044.1) is another GAM391 target gene, herein designated TARGET GENE. LOC349408 BINDING SITE1 through LOC349408 BINDING SITE3 are

target binding sites found in untranslated regions of mRNA encoded by LOC349408, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349408 BINDING SITE1 through LOC349408 BINDING SITE3, designated SEQ ID:6295, SEQ ID:10334 and SEQ ID:5729 respectively, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36444] Another function of GAM391 is therefore inhibition of LOC349408 (Accession XP_303044.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349408.

[36445] LOC349999 (Accession XP_303713.1) is another GAM391 target gene, herein designated TARGET GENE. LOC349999 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC349999, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349999 BINDING SITE, designated SEQ ID:12995, to the nucleotide sequence of GAM391 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:326.

[36446] Another function of GAM391 is therefore inhibition of LOC349999 (Accession XP_303713.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349999.

[36447] LOC90246 (Accession XP_030283.1) is another GAM391 target gene, herein designated TARGET GENE. LOC90246 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC90246, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90246 BINDING SITE, designated SEQ ID:7361, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36448] Another function of GAM391 is therefore inhibition of LOC90246 (Accession XP_030283.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90246.

[36449] LOC90719 (Accession XP_033704.1) is another GAM391 target gene, herein designated TARGET GENE. LOC90719

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC90719, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90719 BINDING SITE, designated SEQ ID:16755, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36450] Another function of GAM391 is therefore inhibition of LOC90719 (Accession XP_033704.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90719.

[36451] LOC90906 (Accession XP_034809.1) is another GAM391 target gene, herein designated TARGET GENE. LOC90906 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC90906, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90906 BINDING SITE, designated SEQ ID:17746, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36452] Another function of GAM391 is therefore inhibition of LOC90906 (Accession XP_034809.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90906.

[36453] Mitogen-activated protein kinase 8 interacting protein 3 (MAPK8IP3, Accession NP_203750.1) is another GAM391 target gene, herein designated TARGET GENE. MAPK8IP3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAPK8IP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAPK8IP3 BINDING SITE, designated SEQ ID:6962, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36454] Another function of GAM391 is therefore inhibition of Mitogen-activated protein kinase 8 interacting protein 3 (MAPK8IP3, Accession NP_203750.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAPK8IP3.

[36455] MGC10772 (Accession NP_085044.2) is another GAM391

target gene, herein designated TARGET GENE. MGC10772 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC10772, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10772 BINDING SITE, designated SEQ ID:3496, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36456] Another function of GAM391 is therefore inhibition of MGC10772 (Accession NP_085044.2) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10772.

[36457] MGC10870 (Accession NP_115677.1) is another GAM391 target gene, herein designated TARGET GENE. MGC10870 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC10870, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10870 BINDING SITE, designated SEQ ID:17365, to the nucleotide sequence of GAM391 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:326.

[36458] Another function of GAM391 is therefore inhibition of MGC10870 (Accession NP_115677.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10870.

[36459] MGC11102 (Accession NP_115701.2) is another GAM391 target gene, herein designated TARGET GENE. MGC11102 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC11102, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC11102 BINDING SITE, designated SEQ ID:17225, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36460] Another function of GAM391 is therefore inhibition of MGC11102 (Accession NP_115701.2) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC11102.

[36461] MGC17299 (Accession NP_653227.1) is another GAM391 target gene, herein designated TARGET GENE. MGC17299

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MGC17299, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC17299 BINDING SITE, designated SEQ ID:14020, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36462] Another function of GAM391 is therefore inhibition of MGC17299 (Accession NP_653227.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC17299.

[36463] MGC2306 (Accession NP_002041.2) is another GAM391 target gene, herein designated TARGET GENE. MGC2306 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC2306, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC2306 BINDING SITE, designated SEQ ID:12989, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36464] Another function of GAM391 is therefore inhibition of MGC2306 (Accession NP_002041.2) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2306.

[36465] MGC2508 (Accession NP_077303.1) is another GAM391 target gene, herein designated TARGET GENE. MGC2508 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC2508, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC2508 BINDING SITE, designated SEQ ID:11605, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36466] Another function of GAM391 is therefore inhibition of MGC2508 (Accession NP_077303.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2508.

[36467] MTO1 (Accession NP_598400.1) is another GAM391 target gene, herein designated TARGET GENE. MTO1 BINDING SITE is a target binding site found in the 3` untranslated

region of multiple transcripts of mRNA encoded by MTO1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MTO1 BINDING SITE, designated SEQ ID:17745, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36468] Another function of GAM391 is therefore inhibition of MTO1 (Accession NP_598400.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MTO1.

[36469] Myosin, light polypeptide kinase (MYLK, Accession NP_444253.1) is another GAM391 target gene, herein designated TARGET GENE. MYLK BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MYLK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYLK BINDING SITE, designated SEQ ID:11895, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36470] Another function of GAM391 is therefore inhibition of

Myosin, light polypeptide kinase (MYLK, Accession NP_444253.1), a gene which is involved in contraction of smooth muscle. Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYLK.

[36471] The function of MYLK and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.Myosin, light polypeptide kinase (MYLK, Accession NP_444256.1) is another GAM391 target gene, herein designated TARGET GENE. MYLK BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MYLK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYLK BINDING SITE, designated SEQ ID:11895, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36472] Another function of GAM391 is therefore inhibition of Myosin, light polypeptide kinase (MYLK, Accession NP_444256.1), a gene which is involved in contraction of smooth muscle. Accordingly, utilities of GAM391 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with MYLK.

[36473] The function of MYLK and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.Myosin, light polypeptide kinase (MYLK, Accession NP_444255.1) is another GAM391 target gene, herein designated TARGET GENE. MYLK BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MYLK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYLK BINDING SITE, designated SEQ ID:11895, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36474] Another function of GAM391 is therefore inhibition of Myosin, light polypeptide kinase (MYLK, Accession NP_444255.1), a gene which is involved in contraction of smooth muscle. Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYLK.

[36475] The function of MYLK and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.Myosin, light polypeptide kinase (MYLK, Accession NP_444254.1) is another GAM391 target gene, herein designated TARGET GENE. MYLK BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MYLK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYLK BINDING SITE, designated SEQ ID:11895, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36476] Another function of GAM391 is therefore inhibition of Myosin, light polypeptide kinase (MYLK, Accession NP_444254.1), a gene which is involved in contraction of smooth muscle. Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYLK.

[36477] The function of MYLK and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.Myosin, light polypeptide kinase (MYLK, Ac-

cession NP_444257.1) is another GAM391 target gene, herein designated TARGET GENE. MYLK BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by MYLK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYLK BINDING SITE, designated SEQ ID:11895, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36478] Another function of GAM391 is therefore inhibition of Myosin, light polypeptide kinase (MYLK, Accession NP_444257.1), a gene which is involved in contraction of smooth muscle. Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYLK.

[36479] The function of MYLK and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.N33 (Accession NP_006756.2) is another GAM391 target gene, herein designated TARGET GENE. N33 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA en-

coded by N33, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of N33 BINDING SITE, designated SEQ ID:6148, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36480] Another function of GAM391 is therefore inhibition of N33 (Accession NP_006756.2), a gene which is a putative integral membrane protein. and therefore may be associated with Metastatic prostate cancer. Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of Metastatic prostate cancer., and of other diseases and clinical conditions associated with N33.

[36481] The function of N33 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1.Nucleoporin 54kda (NUP54, Accession NP_059122.2) is another GAM391 target gene, herein designated TARGET GENE. NUP54 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NUP54, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of NUP54 BINDING SITE, designated SEQ ID:7998, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36482] Another function of GAM391 is therefore inhibition of Nucleoporin 54kda (NUP54, Accession NP_059122.2) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NUP54.

[36483] Orthopedia homolog (drosophila) (OTP, Accession NP_115485.1) is another GAM391 target gene, herein designated TARGET GENE. OTP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OTP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OTP BINDING SITE, designated SEQ ID:18727, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36484] Another function of GAM391 is therefore inhibition of Orthopedia homolog (drosophila) (OTP, Accession NP_115485.1), a gene which involves in the development of the forebrain and spinal cord. Accordingly, utilities of

GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OTP.

[36485] The function of OTP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM148.1.Progesterone receptor membrane component 2 (PGRMC2, Accession NP_006311.1) is another GAM391 target gene, herein designated TARGET GENE. PGRMC2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PGRMC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PGRMC2 BINDING SITE, designated SEQ ID:742, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36486] Another function of GAM391 is therefore inhibition of Progesterone receptor membrane component 2 (PGRMC2, Accession NP_006311.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PGRMC2.

[36487] Preimplantation protein 3 (PREI3, Accession NP_056202.1) is another GAM391 target gene, herein designated TAR-

GET GENE. PREI3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PREI3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PREI3 BINDING SITE, designated SEQ ID:13783, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36488] Another function of GAM391 is therefore inhibition of Preimplantation protein 3 (PREI3, Accession NP_056202.1). Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PREI3.

[36489] PRO2859 (Accession NP_061013.1) is another GAM391 target gene, herein designated TARGET GENE. PRO2859 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PRO2859, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO2859 BINDING SITE, designated SEQ ID:16593, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36490] Another function of GAM391 is therefore inhibition of PRO2859 (Accession NP_061013.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO2859.

[36491] Protease, serine, 11 (igf binding) (PRSS11, Accession NP_002766.1) is another GAM391 target gene, herein designated TARGET GENE. PRSS11 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRSS11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRSS11 BINDING SITE, designated SEQ ID:15793, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36492] Another function of GAM391 is therefore inhibition of Protease, serine, 11 (igf binding) (PRSS11, Accession NP_002766.1), a gene which stimulates the proliferation and differentiation of a vast number of cell types. Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRSS11.

[36493] The function of PRSS11 has been established by previous studies. Insulin- like growth factors (IGFs; OMIM Ref. No. 147440) stimulate the proliferation and differentiation of a vast number of cell types. The action of the growth factors is mediated and controlled by a complex system of components, including at least 2 different forms of IGF, 2 IGF receptors (e.g., 147370), 7 different IGF- binding proteins (IGFBPs; OMIM Ref. No. 146730), and several proteases that cleave the IGFBPs. CLONING Zumbrunn and Trueb (1996) cloned the cDNA for a human protein, termed L56 by them, that seemed to be part of the IGF signaling system. The predicted protein encodes a 480- amino acid polypeptide with a molecular mass of 51 kD. Zumbrunn and Trueb (1996) found that PRSS11 contains a secretory signal sequence, an IGFBP- binding domain, and a serine protease domain. The serine protease domain is most similar to certain bacterial serine proteases. By Northern blot analysis, Zumbrunn and Trueb (1996) showed that PRSS11 is expressed in a variety of human tissues, with strongest expression in placenta. Hu et al. (1998) also cloned PRSS11. The deduced 480- amino acid protein is 98% identical to the cow, guinea pig, and rabbit proteins. It contains an N terminus homologous to MAC25

(IGFBP7; 602867) with a conserved Kazal- type serine protease inhibitor motif, as well as a C- terminal PDZ domain. Semiquantitative RT- PCR and immunoblot analyses showed an approximately 7- fold increase of PRSS11 in osteoarthritis cartilage compared with controls. Functional and mutational analyses indicated that PRS11 is a serine protease dependent on the presence of a serine at position 328

[36494]

[36495] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[36496] Hu, S.- I.; Carozza, M.; Klein, M.; Nantermet, P.; Luk, D.; Crowl, R. M. : Human HtrA, an evolutionarily conserved serine protease identified as a differentially expressed gene product in osteoarthritic cartilage. J. Biol. Chem. 273: 34406- 34412, 1998. ; and

[36497] Zumbrunn, J.; Trueb, B. : Localization of the gene for a serine protease with IGF- binding domain (PRSS11) to human chromosome 10q25.3- q26.2. Genomics 45: 461- 462, 1997.

[36498] Further studies establishing the function and utilities of PRSS11 are found in John Hopkins OMIM database record

ID 602194, and in cited publications listed in Table 5, which are hereby incorporated by reference.Solute carrier family 15 (h+/peptide transporter), member 2 (SLC15A2, Accession NP_066568.2) is another GAM391 target gene, herein designated TARGET GENE. SLC15A2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC15A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC15A2 BINDING SITE, designated SEQ ID:1490, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36499] Another function of GAM391 is therefore inhibition of Solute carrier family 15 (h+/peptide transporter), member 2 (SLC15A2, Accession NP_066568.2) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC15A2.

[36500] Solute carrier family 19 (folate transporter), member 1 (SLC19A1, Accession NP_003047.1) is another GAM391 target gene, herein designated TARGET GENE. SLC19A1 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by SLC19A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC19A1 BINDING SITE, designated SEQ ID:16419, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36501] Another function of GAM391 is therefore inhibition of Solute carrier family 19 (folate transporter), member 1 (SLC19A1, Accession NP_003047.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC19A1.

[36502] Solute carrier family 20 (phosphate transporter), member 1 (SLC20A1, Accession NP_005406.3) is another GAM391 target gene, herein designated TARGET GENE. SLC20A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC20A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC20A1 BINDING SITE, designated SEQ ID:9287, to the nucleotide sequence of GAM391 RNA, herein designated

GAM RNA, also designated SEQ ID:326.

[36503] Another function of GAM391 is therefore inhibition of Solute carrier family 20 (phosphate transporter), member 1 (SLC20A1, Accession NP_005406.3), a gene which could be a sodium- phosphate symporter. Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC20A1.

[36504] The function of SLC20A1 has been established by previous studies. By expression in Xenopus oocytes and in mammalian cells, Kavanaugh et al. (1994) determined that GLVR1 is a sodium- dependent phosphate symporter. Voltage- clamp analysis indicated net cation influx, suggesting that phosphate is transported with excess sodium ions. Palmer et al. (1999) showed that the GLVR1 gene consists of 11 exons spanning approximately 18 kb of genomic DNA. Exon 1 is noncoding. Using a luciferase reporter gene assay in transiently transfected chondrocytes and osteoblasts, Palmer et al. (2001) determined that the activity of the promoter of SLC20A1, which they called PIT1, requires a TATA- like sequence and a single SP1 (OMIM Ref. No. 189906) site. They found that this SP1 site could bind SP1 and SP3 (OMIM Ref. No. 601804). Despite

the conservation of sequence between the human and mouse promoter, the promoter of mouse Pit1 depends on a combination of several cis- acting elements.

[36505]

[36506] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[36507] Kavanaugh, M. P.; Miller, D. G.; Zhang, W.; Law, W.; Kozak, S. L.; Kabat, D.; Miller, A. D. : Cell- surface receptors for gibbon ape leukemia virus and amphotropic murine retrovirus are inducible sodium- dependent phosphate symporters. Proc. Nat. Acad. Sci. 91: 7071- 7075, 1994. ; and

[36508] Palmer, G.; Manen, D.; Bonjour, J.- P.; Caverzasio, J. : Species- specific mechanisms control the activity of the Pit1/PIT1 phosphate transporter gene promoter in mouse and human. Gene 279.

[36509] Further studies establishing the function and utilities of SLC20A1 are found in John Hopkins OMIM database record ID 137570, and in cited publications listed in Table 5, which are hereby incorporated by reference.Solute carrier family 24 (sodium/potassium/calcium exchanger), member 1 (SLC24A1, Accession NP_004718.1) is another GAM391 target gene, herein designated TARGET GENE.

SLC24A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC24A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC24A1 BINDING SITE, designated SEQ ID:17502, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36510] Another function of GAM391 is therefore inhibition of Solute carrier family 24 (sodium/potassium/calcium exchanger), member 1 (SLC24A1, Accession NP_004718.1), a gene which is a critical component of the visual transduction cascade, controlling the calcium concentration of outer segments during light and darkness. Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC24A1.

[36511] The function of SLC24A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Solute carrier family 39 (zinc transporter), member 3 (SLC39A3, Accession NP_653165.1) is another GAM391 target gene, herein designated TARGET GENE.

SLC39A3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC39A3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC39A3 BINDING SITE, designated SEQ ID:15092, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36512] Another function of GAM391 is therefore inhibition of Solute carrier family 39 (zinc transporter), member 3 (SLC39A3, Accession NP_653165.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC39A3.

[36513] SNRK (Accession NP_060189.2) is another GAM391 target gene, herein designated TARGET GENE. SNRK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SNRK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SNRK BINDING SITE, designated SEQ ID:12233, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA,

also designated SEQ ID:326.

[36514] Another function of GAM391 is therefore inhibition of SNRK (Accession NP_060189.2) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SNRK.

[36515] Sry (sex determining region y)-box 11 (SOX11, Accession NP_003099.1) is another GAM391 target gene, herein designated TARGET GENE. SOX11 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SOX11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SOX11 BINDING SITE, designated SEQ ID:14726, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36516] Another function of GAM391 is therefore inhibition of Sry (sex determining region y)-box 11 (SOX11, Accession NP_003099.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SOX11.

[36517] Sepiapterin reductase (7,8-dihydrobiopterin:nadp+ oxidoreductase) (SPR, Accession NP_003115.1) is another

GAM391 target gene, herein designated TARGET GENE. SPR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SPR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPR BINDING SITE, designated SEQ ID:6469, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36518] Another function of GAM391 is therefore inhibition of Sepiapterin reductase (7,8-dihydrobiopterin:nadp+ oxidoreductase) (SPR, Accession NP_003115.1), a gene which catalyzes the and therefore is associated with Sepiapterin reductase deficiency. Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of Sepiapterin reductase deficiency, and of other diseases and clinical conditions associated with SPR.

[36519] The function of SPR has been established by previous studies. Bonafe et al. (2001) reported 2 patients with progressive psychomotor retardation, dystonia, severe dopamine and serotonin deficiencies (low levels of 5- hydroxyindoleacetic and homovanillic acids), and abnormal pterin pattern (high levels of biopterin and dihydro-

biopterin) in cerebrospinal fluid. They presented with normal urinary pterins and without hyperphenylalaninemia. Studies of skin fibroblasts revealed inactive sepiapterin reductase, the enzyme catalyzing the final 2- step reaction in the biosynthesis of tetrahydrobiopterin (BH4). Mutations in the SPR gene were detected in both patients: homozygous (182125.0001) in 1 and compound heterozygous (182125.0002) in the other. The authors suggested that autosomal recessive deficiency of sepiapterin reductase leads to BH4 and neurotransmitter deficiencies without hyperphenylalaninemia and may not be detected by neonatal screening for phenylketonuria.

[36520]

[36521] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[36522] Bonafe, L.; Thony, B.; Penzien, J. M.; Czarnecki, B.; Blau, N. : Mutations in the sepiapterin reductase gene cause a novel tetrahydrobiopterin- dependent monoamine- neurotransmitter deficiency without hyperphenylalaninemia. Am. J. Hum. Genet. 69: 269- 277, 2001. ; and

[36523] Blau, N.; Thony, B.; Renneberg, A.; Arnold, L. A.; Hyland, K. : Dihydropteridine reductase deficiency localized to the

central nervous system. J. Inherit. Metab. Dis. 21: 433-434, 1998.

[36524] Further studies establishing the function and utilities of SPR are found in John Hopkins OMIM database record ID 182125, and in cited publications listed in Table 5, which are hereby incorporated by reference.Sprouty homolog 4 (drosophila) (SPRY4, Accession NP_112226.2) is another GAM391 target gene, herein designated TARGET GENE. SPRY4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SPRY4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPRY4 BINDING SITE, designated SEQ ID:1887, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36525] Another function of GAM391 is therefore inhibition of Sprouty homolog 4 (drosophila) (SPRY4, Accession NP_112226.2) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SPRY4.

[36526] Signal transducer and activator of transcription 3 (acute-phase response factor) (STAT3, Accession

NP_644805.1) is another GAM391 target gene, herein designated TARGET GENE. STAT3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by STAT3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STAT3 BINDING SITE, designated SEQ ID:10246, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36527] Another function of GAM391 is therefore inhibition of Signal transducer and activator of transcription 3 (acute-phase response factor) (STAT3, Accession NP_644805.1), a gene which carries out a dual function: signal transduction and activation of transcription. Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STAT3.

[36528] The function of STAT3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Signal transducer and activator of transcription 3 (acute-phase response factor) (STAT3, Accession

NP_003141.2) is another GAM391 target gene, herein designated TARGET GENE. STAT3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by STAT3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of STAT3 BINDING SITE, designated SEQ ID:10246, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36529] Another function of GAM391 is therefore inhibition of Signal transducer and activator of transcription 3 (acute-phase response factor) (STAT3, Accession NP_003141.2), a gene which carries out a dual function: signal transduction and activation of transcription. Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STAT3.

[36530] The function of STAT3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Surfeit 6 (SURF6, Accession NP_006744.2) is another GAM391 target gene, herein designated TARGET

GENE. SURF6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SURF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SURF6 BINDING SITE, designated SEQ ID:10519, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36531] Another function of GAM391 is therefore inhibition of Surfeit 6 (SURF6, Accession NP_006744.2) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SURF6.

[36532] Synaptotagmin iii (SYT3, Accession NP_115674.1) is another GAM391 target gene, herein designated TARGET GENE. SYT3 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SYT3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SYT3 BINDING SITE, designated SEQ ID:3513, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36533] Another function of GAM391 is therefore inhibition of Synaptotagmin iii (SYT3, Accession NP_115674.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SYT3.

[36534] TBC1D7 (Accession NP_057579.1) is another GAM391 target gene, herein designated TARGET GENE. TBC1D7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TBC1D7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TBC1D7 BINDING SITE, designated SEQ ID:17570, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36535] Another function of GAM391 is therefore inhibition of TBC1D7 (Accession NP_057579.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TBC1D7.

[36536] T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065578.2) is another GAM391 target gene, herein designated TARGET GENE. TCL6 BINDING SITE is a target

binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TCL6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL6 BINDING SITE, designated SEQ ID:4551, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36537] Another function of GAM391 is therefore inhibition of T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065578.2) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCL6.

[36538] T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065577.2) is another GAM391 target gene, herein designated TARGET GENE. TCL6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TCL6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL6 BINDING SITE, designated SEQ ID:4551, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA,

also designated SEQ ID:326.

[36539] Another function of GAM391 is therefore inhibition of T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065577.2) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCL6.

[36540] Tumor necrosis factor receptor superfamily, member 19 (TNFRSF19, Accession NP_683760.1) is another GAM391 target gene, herein designated TARGET GENE. TNFRSF19 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF19, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF19 BINDING SITE, designated SEQ ID:14661, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36541] Another function of GAM391 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 19 (TNFRSF19, Accession NP_683760.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

TNFRSF19.

[36542] Testis-specific transcript, y-linked 14 (TTTY14, Accession NP_114138.1) is another GAM391 target gene, herein designated TARGET GENE. TTTY14 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by TTTY14, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TTTY14 BINDING SITE, designated SEQ ID:2750, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36543] Another function of GAM391 is therefore inhibition of Testis-specific transcript, y-linked 14 (TTTY14, Accession NP_114138.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TTTY14.

[36544] Testis-specific transcript, y-linked 14 (TTTY14, Accession XP_291361.1) is another GAM391 target gene, herein designated TARGET GENE. TTTY14 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by TTTY14, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TTTY14 BINDING SITE, designated SEQ ID:2750, to the nucleotide sequence of GAM391 RNA, herein designated GAM RNA, also designated SEQ ID:326.

[36545] Another function of GAM391 is therefore inhibition of Testis-specific transcript, y-linked 14 (TTTY14, Accession XP_291361.1) . Accordingly, utilities of GAM391 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TTTY14.

[36546]

[36547] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 633 (GAM633), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[36548] GAM633 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM633 was detected is described hereinabove with reference to Figs. 8-15.

[36549] GAM633 gene, herein designated GAM GENE, and GAM633 target gene, herein designated TARGET GENE,

are human genes contained in the human genome.

[36550] GAM633 gene encodes a GAM633 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM633 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM633 precursor RNA is designated SEQ ID:68, and is provided hereinbelow with reference to the sequence listing part.

[36551] GAM633 precursor RNA folds onto itself, forming GAM633 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[36552] GAM633 precursor RNA folds onto itself, forming GAM633 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is

due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[36553] Nucleotide sequence of GAM633 precursor RNA, designated SEQ-ID: 68, and a schematic representation of a predicted secondary folding of GAM633 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[36554] An enzyme complex designated DICER COMPLEX, `dices` the GAM633 folded precursor RNA into GAM633 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: C) nucleotide sequence of GAM633 RNA is designated SEQ ID:340, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[36555] GAM633 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM633 target

RNA, herein designated GAM TARGET RNA. GAM633 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[36556] GAM633 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM633 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM633 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM633 RNA may have a different number of target binding sites in untranslated regions of a GAM633 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR

and 5`UTR regions.

[36557] The complementary binding of GAM633 RNA, herein designated GAM RNA, to target binding sites on GAM633 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM633 target RNA into GAM633 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[36558] It is appreciated that GAM633 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM633 target genes. The mRNA of each one of this plurality of GAM633 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM633 RNA, herein designated GAM RNA, and which when bound by GAM633 RNA causes inhibition of translation of respective one or more GAM633 target proteins.

[36559] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM633 gene, herein designated GAM GENE, on one or more GAM633 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes.

As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[36560] It is appreciated that specific functions and accordingly utilities of GAM633 correlate with, and may be deduced from, the identity of the target genes which GAM633 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[36561]

[36562]

[36563] Adenylate cyclase 7 (ADCY7, Accession NM_001114.1) is a GAM633 target gene, herein designated TARGET GENE. ADCY7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ADCY7, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADCY7 BINDING SITE, designated SEQ ID:8228, to the nucleotide sequence of GAM633 RNA, herein designated GAM RNA, also designated SEQ ID:340.

[36564] A function of GAM633 is therefore inhibition of Adenylate cyclase 7 (ADCY7, Accession NM_001114.1), a gene which this a membrane- bound, ca(2+)- inhibitable adenylyl cyclase. Accordingly, utilities of GAM633 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADCY7.

[36565] The function of ADCY7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM75.1.KIAA1866 (Accession XM_027658.5) is another GAM633 target gene, herein designated TARGET GENE. KIAA1866 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1866, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1866 BINDING SITE, designated SEQ ID:3886, to the nucleotide sequence of GAM633 RNA,

herein designated GAM RNA, also designated SEQ ID:340.

[36566] Another function of GAM633 is therefore inhibition of KIAA1866 (Accession XM_027658.5) . Accordingly, utilities of GAM633 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1866.

[36567] KIAA1879 (Accession XM_056635.4) is another GAM633 target gene, herein designated TARGET GENE. KIAA1879 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA1879, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1879 BINDING SITE, designated SEQ ID:6010, to the nucleotide sequence of GAM633 RNA, herein designated GAM RNA, also designated SEQ ID:340.

[36568] Another function of GAM633 is therefore inhibition of KIAA1879 (Accession XM_056635.4) . Accordingly, utilities of GAM633 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1879.

[36569] LOC147178 (Accession) is another GAM633 target gene, herein designated TARGET GENE. LOC147178 BINDING

SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC147178, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147178 BINDING SITE, designated SEQ ID:2676, to the nucleotide sequence of GAM633 RNA, herein designated GAM RNA, also designated SEQ ID:340.

[36570] Another function of GAM633 is therefore inhibition of LOC147178 (Accession) . Accordingly, utilities of GAM633 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147178.

[36571] LOC157697 (Accession XM_291282.2) is another GAM633 target gene, herein designated TARGET GENE. LOC157697 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC157697, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157697 BINDING SITE, designated SEQ ID:20176, to the nucleotide sequence of GAM633 RNA, herein designated GAM RNA, also designated SEQ ID:340.

[36572] Another function of GAM633 is therefore inhibition of LOC157697 (Accession XM_291282.2) . Accordingly, utilities of GAM633 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157697.

[36573]

[36574] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 895 (GAM895), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[36575] GAM895 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM895 was detected is described hereinabove with reference to Figs. 8-15.

[36576] GAM895 gene, herein designated GAM GENE, and GAM895 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[36577] GAM895 gene encodes a GAM895 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM895 precursor RNA does not encode a protein. A nucleotide sequence

identical or highly similar to the nucleotide sequence of GAM895 precursor RNA is designated SEQ ID:93, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:93 is located at position 93949146 relative to chromosome 11.

[36578] GAM895 precursor RNA folds onto itself, forming GAM895 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[36579] GAM895 precursor RNA folds onto itself, forming GAM895 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[36580] Nucleotide sequence of GAM895 precursor RNA, designated SEQ-ID: 93, and a schematic representation of a predicted secondary folding of GAM895 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[36581] An enzyme complex designated DICER COMPLEX, `dices` the GAM895 folded precursor RNA into GAM895 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: A) nucleotide sequence of GAM895 RNA is designated SEQ ID:379, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[36582] GAM895 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM895 target RNA, herein designated GAM TARGET RNA. GAM895 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated

5`UTR, PROTEIN CODING and 3`UTR respectively.

[36583] GAM895 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM895 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM895 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM895 RNA may have a different number of target binding sites in untranslated regions of a GAM895 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[36584] The complementary binding of GAM895 RNA, herein designated GAM RNA, to target binding sites on GAM895 target RNA, herein designated GAM TARGET RNA, such as

BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM895 target RNA into GAM895 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[36585] It is appreciated that GAM895 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM895 target genes. The mRNA of each one of this plurality of GAM895 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM895 RNA, herein designated GAM RNA, and which when bound by GAM895 RNA causes inhibition of translation of respective one or more GAM895 target proteins.

[36586] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM895 gene, herein designated GAM GENE, on one or more GAM895 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other

recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[36587] It is appreciated that specific functions and accordingly utilities of GAM895 correlate with, and may be deduced from, the identity of the target genes which GAM895 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[36588]

[36589]

[36590] Atp-binding cassette, sub-family a (abc1), member 1 (ABCA1, Accession NP_005493.2) is a GAM895 target gene, herein designated TARGET GENE. ABCA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABCA1 BINDING SITE, designated SEQ ID:2647, to the nucleotide se-

quence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36591] A function of GAM895 is therefore inhibition of Atp-binding cassette, sub-family a (abc1), member 1 (ABCA1, Accession NP_005493.2), a gene which camp- dependent and sulfonylurea- sensitive anion transporter. and therefore is associated with Tangier disease (high density lipoprotein deficiency type i). Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of Tangier disease (high density lipoprotein deficiency type i), and of other diseases and clinical conditions associated with ABCA1.

[36592] The function of ABCA1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.AD034 (Accession NP_113668.2) is another GAM895 target gene, herein designated TARGET GENE. AD034 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AD034, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AD034 BINDING SITE, designated

SEQ ID:5799, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36593] Another function of GAM895 is therefore inhibition of AD034 (Accession NP_113668.2) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AD034.

[36594] AD034 (Accession NP_694550.1) is another GAM895 target gene, herein designated TARGET GENE. AD034 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AD034, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AD034 BINDING SITE, designated SEQ ID:5799, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36595] Another function of GAM895 is therefore inhibition of AD034 (Accession NP_694550.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AD034.

[36596] Aprataxin (APTX, Accession NP_778242.1) is another GAM895 target gene, herein designated TARGET GENE. APTX BINDING SITE is a target binding site found in the 5`

untranslated region of multiple transcripts of mRNA encoded by APTX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APTX BINDING SITE, designated SEQ ID:11308, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36597] Another function of GAM895 is therefore inhibition of Aprataxin (APTX, Accession NP_778242.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APTX.

[36598] Cdc42 guanine nucleotide exchange factor (gef) 9 (ARHGEF9, Accession NP_056000.1) is another GAM895 target gene, herein designated TARGET GENE. ARHGEF9 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHGEF9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHGEF9 BINDING SITE, designated SEQ ID:3229, to the nucleotide sequence of GAM895 RNA, herein designated

GAM RNA, also designated SEQ ID:379.

[36599] Another function of GAM895 is therefore inhibition of Cdc42 guanine nucleotide exchange factor (gef) 9 (ARHGEF9, Accession NP_056000.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHGEF9.

[36600] Actin related protein 2/3 complex, subunit 5, 16kda (ARPC5, Accession NP_005708.1) is another GAM895 target gene, herein designated TARGET GENE. ARPC5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARPC5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARPC5 BINDING SITE, designated SEQ ID:3112, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36601] Another function of GAM895 is therefore inhibition of Actin related protein 2/3 complex, subunit 5, 16kda (ARPC5, Accession NP_005708.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARPC5.

[36602] b5+b5R (Accession NP_057314.1) is another GAM895 target gene, herein designated TARGET GENE. b5+b5R BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by b5+b5R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of b5+b5R BINDING SITE, designated SEQ ID:14738, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36603] Another function of GAM895 is therefore inhibition of b5+b5R (Accession NP_057314.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with b5+b5R.

[36604] Baculoviral iap repeat-containing 5 (survivin) (BIRC5, Accession NP_001159.1) is another GAM895 target gene, herein designated TARGET GENE. BIRC5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BIRC5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BIRC5 BINDING SITE,

designated SEQ ID:19223, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36605] Another function of GAM895 is therefore inhibition of Baculoviral iap repeat-containing 5 (survivin) (BIRC5, Accession NP_001159.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BIRC5.

[36606] Basonuclin (BNC, Accession NP_001708.2) is another GAM895 target gene, herein designated TARGET GENE. BNC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BNC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BNC BINDING SITE, designated SEQ ID:19010, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36607] Another function of GAM895 is therefore inhibition of Basonuclin (BNC, Accession NP_001708.2), a gene which plays a role in the maintenance of proliferative capacity and prevention of terminal differentiation of keratinocytes. Accordingly, utilities of GAM895 include diag-

nosis, prevention and treatment of diseases and clinical conditions associated with BNC.

[36608] The function of BNC and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM427.1.C13orf18 (Accession NP_079389.1) is another GAM895 target gene, herein designated TARGET GENE. C13orf18 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C13orf18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C13orf18 BINDING SITE, designated SEQ ID:10373, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36609] Another function of GAM895 is therefore inhibition of C13orf18 (Accession NP_079389.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C13orf18.

[36610] Calcium-binding tyrosine-(y)-phosphorylation regulated (fibrousheathin 2) (CABYR, Accession NP_036321.2) is an-

other GAM895 target gene, herein designated TARGET GENE. CABYR BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CABYR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CABYR BINDING SITE, designated SEQ ID:16855, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36611] Another function of GAM895 is therefore inhibition of Calcium-binding tyrosine-(y)-phosphorylation regulated (fibrousheathin 2) (CABYR, Accession NP_036321.2) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CABYR.

[36612] Calcium-binding tyrosine-(y)-phosphorylation regulated (fibrousheathin 2) (CABYR, Accession NP_722453.1) is another GAM895 target gene, herein designated TARGET GENE. CABYR BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CABYR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BIND-

ING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CABYR BINDING SITE, designated SEQ ID:16855, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36613] Another function of GAM895 is therefore inhibition of Calcium-binding tyrosine-(y)-phosphorylation regulated (fibrousheathin 2) (CABYR, Accession NP_722453.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CABYR.

[36614] Calcium-binding tyrosine-(y)-phosphorylation regulated (fibrousheathin 2) (CABYR, Accession NP_722452.1) is another GAM895 target gene, herein designated TARGET GENE. CABYR BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CABYR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CABYR BINDING SITE, designated SEQ ID:16855, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36615] Another function of GAM895 is therefore inhibition of Calcium-binding tyrosine-(y)-phosphorylation regulated (fibrousheathin 2) (CABYR, Accession NP_722452.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CABYR.

[36616] Calcium-binding tyrosine-(y)-phosphorylation regulated (fibrousheathin 2) (CABYR, Accession NP_722454.1) is another GAM895 target gene, herein designated TARGET GENE. CABYR BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CABYR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CABYR BINDING SITE, designated SEQ ID:16855, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36617] Another function of GAM895 is therefore inhibition of Calcium-binding tyrosine-(y)-phosphorylation regulated (fibrousheathin 2) (CABYR, Accession NP_722454.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions as-

sociated with CABYR.

[36618] Calcium-binding tyrosine-(y)-phosphorylation regulated (fibrousheathin 2) (CABYR, Accession NP_619585.1) is another GAM895 target gene, herein designated TARGET GENE. CABYR BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CABYR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CABYR BINDING SITE, designated SEQ ID:16855, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36619] Another function of GAM895 is therefore inhibition of Calcium-binding tyrosine-(y)-phosphorylation regulated (fibrousheathin 2) (CABYR, Accession NP_619585.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CABYR.

[36620] Calmodulin 1 (phosphorylase kinase, delta) (CALM1, Accession NP_008819.1) is another GAM895 target gene, herein designated TARGET GENE. CALM1 BINDING SITE is a target binding site found in the 3` untranslated region of

mRNA encoded by CALM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CALM1 BINDING SITE, designated SEQ ID:10029, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36621] Another function of GAM895 is therefore inhibition of Calmodulin 1 (phosphorylase kinase, delta) (CALM1, Accession NP_008819.1), a gene which plays roles in growth and the cell cycle as well as in signal transduction and the synthesis and release of neurotransmitters. Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CALM1.

[36622] The function of CALM1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM180.1.Chromodomain protein, y chromosome-like (CDYL, Accession NP_004815.2) is another GAM895 target gene, herein designated TARGET GENE. CDYL BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CDYL,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDYL BINDING SITE, designated SEQ ID:11324, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36623] Another function of GAM895 is therefore inhibition of Chromodomain protein, y chromosome-like (CDYL, Accession NP_004815.2) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDYL.

[36624] Chromodomain protein, y chromosome-like (CDYL, Accession NP_736608.1) is another GAM895 target gene, herein designated TARGET GENE. CDYL BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CDYL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDYL BINDING SITE, designated SEQ ID:11324, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36625] Another function of GAM895 is therefore inhibition of

Chromodomain protein, y chromosome-like (CDYL, Accession NP_736608.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDYL.

[36626] Chromodomain protein, y chromosome-like (CDYL, Accession NP_736607.1) is another GAM895 target gene, herein designated TARGET GENE. CDYL BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CDYL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDYL BINDING SITE, designated SEQ ID:11324, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36627] Another function of GAM895 is therefore inhibition of Chromodomain protein, y chromosome-like (CDYL, Accession NP_736607.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDYL.

[36628] CGI-141 (Accession NP_057156.1) is another GAM895 target gene, herein designated TARGET GENE. CGI-141 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by CGI-141, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CGI-141 BINDING SITE, designated SEQ ID:12491, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36629] Another function of GAM895 is therefore inhibition of CGI-141 (Accession NP_057156.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CGI-141.

[36630] Contactin 3 (plasmacytoma associated) (CNTN3, Accession XP_039627.7) is another GAM895 target gene, herein designated TARGET GENE. CNTN3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNTN3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CNTN3 BINDING SITE, designated SEQ ID:19069, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36631] Another function of GAM895 is therefore inhibition of Contactin 3 (plasmacytoma associated) (CNTN3, Accession XP_039627.7), a gene which may play a role in the initial growth and guidance of axons. and therefore may be associated with Plasmacytomas. Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of Plasmacytomas, and of other diseases and clinical conditions associated with CNTN3.

[36632] The function of CNTN3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.2.CPR8 (Accession NP_065790.1) is another GAM895 target gene, herein designated TARGET GENE. CPR8 BINDING SITE1 and CPR8 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CPR8, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CPR8 BINDING SITE1 and CPR8 BINDING SITE2, designated SEQ ID:9187 and SEQ ID:1778 respectively, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36633] Another function of GAM895 is therefore inhibition of CPR8 (Accession NP_065790.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPR8.

[36634] Camp responsive element binding protein-like 2 (CREBL2, Accession NP_001301.1) is another GAM895 target gene, herein designated TARGET GENE. CREBL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CREBL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CREBL2 BINDING SITE, designated SEQ ID:14613, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36635] Another function of GAM895 is therefore inhibition of Camp responsive element binding protein-like 2 (CREBL2, Accession NP_001301.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CREBL2.

[36636] DKFZp761B107 (Accession NP_775734.1) is another GAM895 target gene, herein designated TARGET GENE. DKFZp761B107 BINDING SITE is a target binding site

found in the 3` untranslated region of mRNA encoded by DKFZp761B107, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761B107 BINDING SITE, designated SEQ ID:10303, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36637] Another function of GAM895 is therefore inhibition of DKFZp761B107 (Accession NP_775734.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761B107.

[36638] Edar-associated death domain (EDARADD, Accession NP_542776.1) is another GAM895 target gene, herein designated TARGET GENE. EDARADD BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by EDARADD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EDARADD BINDING SITE, designated SEQ ID:18853, to the nucleotide sequence of GAM895 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:379.

[36639] Another function of GAM895 is therefore inhibition of Edar-associated death domain (EDARADD, Accession NP_542776.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EDARADD.

[36640] Edar-associated death domain (EDARADD, Accession NP_665860.1) is another GAM895 target gene, herein designated TARGET GENE. EDARADD BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by EDARADD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EDARADD BINDING SITE, designated SEQ ID:18853, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36641] Another function of GAM895 is therefore inhibition of Edar-associated death domain (EDARADD, Accession NP_665860.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EDARADD.

[36642] EEF2K (Accession NP_037434.1) is another GAM895 target

gene, herein designated TARGET GENE. EEF2K BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EEF2K, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EEF2K BINDING SITE, designated SEQ ID:3811, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36643] Another function of GAM895 is therefore inhibition of EEF2K (Accession NP_037434.1), a gene which phosphorylates serine or threonine on the eukaryotic elongation factor- 2 and therefore may be associated with Systemic lupus erythematosus and cancer. Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of Systemic lupus erythematosus and cancer, and of other diseases and clinical conditions associated with EEF2K.

[36644] The function of EEF2K and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.EXO70 (Accession NP_056034.1) is another GAM895 target gene, herein designated TARGET GENE. EXO70 BINDING SITE is a target binding site found in the

3` untranslated region of mRNA encoded by EXO70, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EXO70 BINDING SITE, designated SEQ ID:16998, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36645] Another function of GAM895 is therefore inhibition of EXO70 (Accession NP_056034.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EXO70.

[36646] Fatty acid binding protein 7, brain (FABP7, Accession NP_001437.1) is another GAM895 target gene, herein designated TARGET GENE. FABP7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FABP7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FABP7 BINDING SITE, designated SEQ ID:14375, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36647] Another function of GAM895 is therefore inhibition of

Fatty acid binding protein 7, brain (FABP7, Accession NP_001437.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FABP7.

[36648] Fc fragment of igg, low affinity iiib, receptor for (cd16) (FCGR3B, Accession NP_000561.1) is another GAM895 target gene, herein designated TARGET GENE. FCGR3B BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FCGR3B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FCGR3B BINDING SITE, designated SEQ ID:12304, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36649] Another function of GAM895 is therefore inhibition of Fc fragment of igg, low affinity iiib, receptor for (cd16) (FCGR3B, Accession NP_000561.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FCGR3B.

[36650] Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial

dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075259.1) is another GAM895 target gene, herein designated TARGET GENE. FGFR2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FGFR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR2 BINDING SITE, designated SEQ ID:7425, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36651] Another function of GAM895 is therefore inhibition of Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075259.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR2.

[36652] Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jack-

son-weiss syndrome) (FGFR2, Accession NP_075418.1) is another GAM895 target gene, herein designated TARGET GENE. FGFR2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FGFR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR2 BINDING SITE, designated SEQ ID:7425, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36653] Another function of GAM895 is therefore inhibition of Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075418.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR2.

[36654] Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075264.2) is

another GAM895 target gene, herein designated TARGET GENE. FGFR2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FGFR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR2 BINDING SITE, designated SEQ ID:7425, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36655] Another function of GAM895 is therefore inhibition of Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075264.2) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR2.

[36656] Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075261.1) is another GAM895 target gene, herein designated TARGET

GENE. FGFR2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FGFR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR2 BINDING SITE, designated SEQ ID:7425, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36657] Another function of GAM895 is therefore inhibition of Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075261.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR2.

[36658] Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075258.1) is another GAM895 target gene, herein designated TARGET GENE. FGFR2 BINDING SITE is a target binding site found

in the 3` untranslated region of multiple transcripts of mRNA encoded by FGFR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR2 BINDING SITE, designated SEQ ID:7425, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36659] Another function of GAM895 is therefore inhibition of Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075258.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR2.

[36660] Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075420.1) is another GAM895 target gene, herein designated TARGET GENE. FGFR2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of

mRNA encoded by FGFR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR2 BINDING SITE, designated SEQ ID:7425, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36661] Another function of GAM895 is therefore inhibition of Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075420.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR2.

[36662] Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075419.1) is another GAM895 target gene, herein designated TARGET GENE. FGFR2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FGFR2, corresponding to a target bind-

ing site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR2 BINDING SITE, designated SEQ ID:7425, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36663] Another function of GAM895 is therefore inhibition of Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075419.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR2.

[36664] Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075417.1) is another GAM895 target gene, herein designated TARGET GENE. FGFR2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FGFR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BIND-

ING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGFR2 BINDING SITE, designated SEQ ID:7425, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36665] Another function of GAM895 is therefore inhibition of Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_075417.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR2.

[36666] Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_000132.1) is another GAM895 target gene, herein designated TARGET GENE. FGFR2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FGFR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementar-

ity of the nucleotide sequences of FGFR2 BINDING SITE, designated SEQ ID:7425, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36667] Another function of GAM895 is therefore inhibition of Fibroblast growth factor receptor 2 (bacteria-expressed kinase, keratinocyte growth factor receptor, craniofacial dysostosis 1, crouzon syndrome, pfeiffer syndrome, jackson-weiss syndrome) (FGFR2, Accession NP_000132.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGFR2.

[36668] Formin homology 2 domain containing 2 (FHOD2, Accession XP_057927.2) is another GAM895 target gene, herein designated TARGET GENE. FHOD2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FHOD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FHOD2 BINDING SITE, designated SEQ ID:19209, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36669] Another function of GAM895 is therefore inhibition of Formin homology 2 domain containing 2 (FHOD2, Accession XP_057927.2) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FHOD2.

[36670] FLJ10298 (Accession NP_060520.2) is another GAM895 target gene, herein designated TARGET GENE. FLJ10298 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ10298, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10298 BINDING SITE, designated SEQ ID:8638, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36671] Another function of GAM895 is therefore inhibition of FLJ10298 (Accession NP_060520.2) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10298.

[36672] FLJ12747 (Accession XP_290972.1) is another GAM895 target gene, herein designated TARGET GENE. FLJ12747 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by FLJ12747, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12747 BINDING SITE, designated SEQ ID:19622, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36673] Another function of GAM895 is therefore inhibition of FLJ12747 (Accession XP_290972.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12747.

[36674] FLJ20360 (Accession NP_060252.1) is another GAM895 target gene, herein designated TARGET GENE. FLJ20360 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20360, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20360 BINDING SITE, designated SEQ ID:6214, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36675] Another function of GAM895 is therefore inhibition of

FLJ20360 (Accession NP_060252.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20360.

[36676] FLJ20671 (Accession NP_060394.1) is another GAM895 target gene, herein designated TARGET GENE. FLJ20671 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20671, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20671 BINDING SITE, designated SEQ ID:14149, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36677] Another function of GAM895 is therefore inhibition of FLJ20671 (Accession NP_060394.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20671.

[36678] FLJ20719 (Accession NP_060410.1) is another GAM895 target gene, herein designated TARGET GENE. FLJ20719 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ20719, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20719 BINDING SITE, designated SEQ ID:17227, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36679] Another function of GAM895 is therefore inhibition of FLJ20719 (Accession NP_060410.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20719.

[36680] FLJ23053 (Accession NP_075058.1) is another GAM895 target gene, herein designated TARGET GENE. FLJ23053 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23053, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23053 BINDING SITE, designated SEQ ID:3463, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36681] Another function of GAM895 is therefore inhibition of FLJ23053 (Accession NP_075058.1) . Accordingly, utilities

of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23053.

[36682] Fbj murine osteosarcoma viral oncogene homolog b (FOSB, Accession NP_006723.1) is another GAM895 target gene, herein designated TARGET GENE. FOSB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FOSB BINDING SITE, designated SEQ ID:13889, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36683] Another function of GAM895 is therefore inhibition of Fbj murine osteosarcoma viral oncogene homolog b (FOSB, Accession NP_006723.1), a gene which interacts with jun proteins enhancing their dna binding activity. and therefore may be associated with Cocaine addiction. Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of Cocaine addiction, and of other diseases and clinical conditions associated with FOSB.

[36684] The function of FOSB and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM53.1.Forkhead box a1 (FOXA1, Accession NP_004487.2) is another GAM895 target gene, herein designated TARGET GENE. FOXA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FOXA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FOXA1 BINDING SITE, designated SEQ ID:19373, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36685] Another function of GAM895 is therefore inhibition of Forkhead box a1 (FOXA1, Accession NP_004487.2) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FOXA1.

[36686] Forkhead box d4 (FOXD4, Accession XP_095746.6) is another GAM895 target gene, herein designated TARGET GENE. FOXD4 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FOXD4, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FOXD4 BINDING SITE, designated SEQ ID:5668, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36687] Another function of GAM895 is therefore inhibition of Forkhead box d4 (FOXD4, Accession XP_095746.6) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FOXD4.

[36688] Fucose-1-phosphate guanylyltransferase (FPGT, Accession NP_003829.1) is another GAM895 target gene, herein designated TARGET GENE. FPGT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FPGT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FPGT BINDING SITE, designated SEQ ID:17275, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36689] Another function of GAM895 is therefore inhibition of Fucose-1-phosphate guanylyltransferase (FPGT, Accession

NP_003829.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FPGT.

[36690] HIST2H2BE (Accession NP_003519.1) is another GAM895 target gene, herein designated TARGET GENE. HIST2H2BE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HIST2H2BE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HIST2H2BE BINDING SITE, designated SEQ ID:7494, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36691] Another function of GAM895 is therefore inhibition of HIST2H2BE (Accession NP_003519.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HIST2H2BE.

[36692] Hippocalcin like 4 (HPCAL4, Accession NP_057341.1) is another GAM895 target gene, herein designated TARGET GENE. HPCAL4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HPCAL4, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HPCAL4 BINDING SITE, designated SEQ ID:11696, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36693] Another function of GAM895 is therefore inhibition of Hippocalcin like 4 (HPCAL4, Accession NP_057341.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HPCAL4.

[36694] Interferon regulatory factor 5 (IRF5, Accession NP_002191.1) is another GAM895 target gene, herein designated TARGET GENE. IRF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IRF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IRF5 BINDING SITE, designated SEQ ID:4930, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36695] Another function of GAM895 is therefore inhibition of In-

terferon regulatory factor 5 (IRF5, Accession NP_002191.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IRF5.

[36696] Interferon regulatory factor 5 (IRF5, Accession NP_116032.1) is another GAM895 target gene, herein designated TARGET GENE. IRF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IRF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IRF5 BINDING SITE, designated SEQ ID:4930, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36697] Another function of GAM895 is therefore inhibition of Interferon regulatory factor 5 (IRF5, Accession NP_116032.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IRF5.

[36698] Potassium voltage-gated channel, shaker-related subfamily, beta member 1 (KCNAB1, Accession NP_003462.2) is another GAM895 target gene, herein designated TARGET

GENE. KCNAB1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KCNAB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNAB1 BINDING SITE, designated SEQ ID:13233, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36699] Another function of GAM895 is therefore inhibition of Potassium voltage-gated channel, shaker-related subfamily, beta member 1 (KCNAB1, Accession NP_003462.2), a gene which is the regulatory beta subunit for a shaker-related voltage- gated potassium channel. Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNAB1.

[36700] The function of KCNAB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM333.1.Potassium voltage-gated channel, shaker-related subfamily, beta member 1 (KCNAB1, Accession NP_751891.1) is another GAM895 target gene, herein

designated TARGET GENE. KCNAB1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KCNAB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNAB1 BINDING SITE, designated SEQ ID:13233, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36701] Another function of GAM895 is therefore inhibition of Potassium voltage-gated channel, shaker-related subfamily, beta member 1 (KCNAB1, Accession NP_751891.1), a gene which is the regulatory beta subunit for a shaker-related voltage- gated potassium channel. Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNAB1.

[36702] The function of KCNAB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM333.1.Potassium voltage-gated channel, shaker-related subfamily, beta member 1 (KCNAB1, Accession NP_751892.1) is another GAM895 target gene, herein

designated TARGET GENE. KCNAB1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KCNAB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNAB1 BINDING SITE, designated SEQ ID:13233, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36703] Another function of GAM895 is therefore inhibition of Potassium voltage-gated channel, shaker-related subfamily, beta member 1 (KCNAB1, Accession NP_751892.1), a gene which is the regulatory beta subunit for a shaker-related voltage- gated potassium channel. Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNAB1.

[36704] The function of KCNAB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM333.1.Kdel (lys-asp-glu-leu) endoplasmic reticulum protein retention receptor 3 (KDELR3, Accession NP_006846.1) is another GAM895 target gene, herein

designated TARGET GENE. KDELR3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KDELR3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KDELR3 BINDING SITE, designated SEQ ID:20033, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36705] Another function of GAM895 is therefore inhibition of Kdel (lys-asp-glu-leu) endoplasmic reticulum protein retention receptor 3 (KDELR3, Accession NP_006846.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KDELR3.

[36706] Kinase insert domain receptor (a type iii receptor tyrosine kinase) (KDR, Accession NP_002244.1) is another GAM895 target gene, herein designated TARGET GENE. KDR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KDR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KDR BINDING SITE, designated SEQ ID:5354, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36707] Another function of GAM895 is therefore inhibition of Kinase insert domain receptor (a type iii receptor tyrosine kinase) (KDR, Accession NP_002244.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KDR.

[36708] KIAA0237 (Accession NP_055562.1) is another GAM895 target gene, herein designated TARGET GENE. KIAA0237 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0237, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0237 BINDING SITE, designated SEQ ID:14809, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36709] Another function of GAM895 is therefore inhibition of KIAA0237 (Accession NP_055562.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0237.

[36710] KIAA1594 (Accession XP_050754.5) is another GAM895 target gene, herein designated TARGET GENE. KIAA1594 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1594, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1594 BINDING SITE, designated SEQ ID:13533, to the

nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36711] Another function of GAM895 is therefore inhibition of KIAA1594 (Accession XP_050754.5) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1594.

[36712] KIAA1805 (Accession NP_115810.1) is another GAM895 target gene, herein designated TARGET GENE. KIAA1805 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1805, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1805 BINDING SITE, designated SEQ ID:11408, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36713] Another function of GAM895 is therefore inhibition of KIAA1805 (Accession NP_115810.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1805.

[36714] KIAA1894 (Accession XP_058025.2) is another GAM895

target gene, herein designated TARGET GENE. KIAA1894 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1894, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1894 BINDING SITE, designated SEQ ID:15021, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36715] Another function of GAM895 is therefore inhibition of KIAA1894 (Accession XP_058025.2) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1894.

[36716] KIAA1904 (Accession XP_056282.1) is another GAM895 target gene, herein designated TARGET GENE. KIAA1904 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1904, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1904 BINDING SITE, designated SEQ ID:17616, to the nucleotide sequence of GAM895 RNA, herein designated

GAM RNA, also designated SEQ ID:379.

[36717] Another function of GAM895 is therefore inhibition of KIAA1904 (Accession XP_056282.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1904.

[36718] LCHN (Accession XP_098615.2) is another GAM895 target gene, herein designated TARGET GENE. LCHN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LCHN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LCHN BINDING SITE, designated SEQ ID:13004, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36719] Another function of GAM895 is therefore inhibition of LCHN (Accession XP_098615.2) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LCHN.

[36720] LGN (Accession NP_037428.2) is another GAM895 target gene, herein designated TARGET GENE. LGN BINDING SITE is a target binding site found in the 3` untranslated re-

gion of mRNA encoded by LGN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LGN BINDING SITE, designated SEQ ID:9501, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36721] Another function of GAM895 is therefore inhibition of LGN (Accession NP_037428.2) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LGN.

[36722] LOC126755 (Accession XP_059074.1) is another GAM895 target gene, herein designated TARGET GENE. LOC126755 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC126755, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC126755 BINDING SITE, designated SEQ ID:11812, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36723] Another function of GAM895 is therefore inhibition of LOC126755 (Accession XP_059074.1) . Accordingly, utili-

ties of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC126755.

[36724] LOC134637 (Accession XP_059727.3) is another GAM895 target gene, herein designated TARGET GENE. LOC134637 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC134637, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC134637 BINDING SITE, designated SEQ ID:6440, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36725] Another function of GAM895 is therefore inhibition of LOC134637 (Accession XP_059727.3) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC134637.

[36726] LOC146520 (Accession XP_085492.1) is another GAM895 target gene, herein designated TARGET GENE. LOC146520 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146520, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146520 BINDING SITE, designated SEQ ID:4472, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36727] Another function of GAM895 is therefore inhibition of LOC146520 (Accession XP_085492.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146520.

[36728] LOC148696 (Accession XP_097505.1) is another GAM895 target gene, herein designated TARGET GENE. LOC148696 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC148696, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC148696 BINDING SITE, designated SEQ ID:12372, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36729] Another function of GAM895 is therefore inhibition of LOC148696 (Accession XP_097505.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC148696.

[36730] LOC151584 (Accession XP_098089.1) is another GAM895 target gene, herein designated TARGET GENE. LOC151584 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC151584, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151584 BINDING SITE, designated SEQ ID:19877, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36731] Another function of GAM895 is therefore inhibition of LOC151584 (Accession XP_098089.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151584.

[36732] LOC154084 (Accession XP_098468.1) is another GAM895 target gene, herein designated TARGET GENE. LOC154084 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC154084, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC154084 BINDING SITE, designated SEQ ID:10300, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36733] Another function of GAM895 is therefore inhibition of LOC154084 (Accession XP_098468.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154084.

[36734] LOC158427 (Accession NP_640339.3) is another GAM895 target gene, herein designated TARGET GENE. LOC158427 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC158427, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC158427 BINDING SITE, designated SEQ ID:1013, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36735] Another function of GAM895 is therefore inhibition of LOC158427 (Accession NP_640339.3) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC158427.

[36736] LOC199953 (Accession XP_114067.2) is another GAM895 target gene, herein designated TARGET GENE. LOC199953 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC199953, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC199953 BINDING SITE, designated SEQ ID:13875, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36737] Another function of GAM895 is therefore inhibition of LOC199953 (Accession XP_114067.2) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC199953.

[36738] LOC203107 (Accession XP_300975.1) is another GAM895 target gene, herein designated TARGET GENE. LOC203107 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC203107, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC203107 BINDING SITE, designated SEQ ID:1112, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36739] Another function of GAM895 is therefore inhibition of LOC203107 (Accession XP_300975.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC203107.

[36740] LOC203504 (Accession XP_117550.1) is another GAM895 target gene, herein designated TARGET GENE. LOC203504 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC203504, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC203504 BINDING SITE, designated SEQ ID:15970, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36741] Another function of GAM895 is therefore inhibition of LOC203504 (Accession XP_117550.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC203504.

[36742] LOC221424 (Accession XP_168060.2) is another GAM895 target gene, herein designated TARGET GENE. LOC221424 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC221424, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221424 BINDING SITE, designated SEQ ID:9114, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36743] Another function of GAM895 is therefore inhibition of LOC221424 (Accession XP_168060.2) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221424.

[36744] LOC256861 (Accession XP_173004.1) is another GAM895 target gene, herein designated TARGET GENE. LOC256861 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC256861, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC256861 BINDING SITE, designated SEQ ID:14032, to

the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36745] Another function of GAM895 is therefore inhibition of LOC256861 (Accession XP_173004.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC256861.

[36746] LOC283104 (Accession XP_210888.1) is another GAM895 target gene, herein designated TARGET GENE. LOC283104 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283104, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283104 BINDING SITE, designated SEQ ID:10722, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36747] Another function of GAM895 is therefore inhibition of LOC283104 (Accession XP_210888.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283104.

[36748] LOC283241 (Accession NP_787089.1) is another GAM895

target gene, herein designated TARGET GENE. LOC283241 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283241, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283241 BINDING SITE, designated SEQ ID:8821, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36749] Another function of GAM895 is therefore inhibition of LOC283241 (Accession NP_787089.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283241.

[36750] LOC283248 (Accession NP_775858.1) is another GAM895 target gene, herein designated TARGET GENE. LOC283248 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283248, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283248 BINDING SITE, designated SEQ ID:18722, to the nucleotide sequence of GAM895 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:379.

[36751] Another function of GAM895 is therefore inhibition of LOC283248 (Accession NP_775858.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283248.

[36752] LOC283425 (Accession XP_208665.1) is another GAM895 target gene, herein designated TARGET GENE. LOC283425 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283425, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283425 BINDING SITE, designated SEQ ID:2908, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36753] Another function of GAM895 is therefore inhibition of LOC283425 (Accession XP_208665.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283425.

[36754] LOC283578 (Accession XP_208746.1) is another GAM895 target gene, herein designated TARGET GENE. LOC283578

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283578, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283578 BINDING SITE, designated SEQ ID:14912, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36755] Another function of GAM895 is therefore inhibition of LOC283578 (Accession XP_208746.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283578.

[36756] LOC284018 (Accession XP_211303.1) is another GAM895 target gene, herein designated TARGET GENE. LOC284018 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284018, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284018 BINDING SITE, designated SEQ ID:12876, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36757] Another function of GAM895 is therefore inhibition of LOC284018 (Accession XP_211303.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284018.

[36758] LOC284433 (Accession XP_210787.1) is another GAM895 target gene, herein designated TARGET GENE. LOC284433 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284433, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284433 BINDING SITE, designated SEQ ID:6998, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36759] Another function of GAM895 is therefore inhibition of LOC284433 (Accession XP_210787.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284433.

[36760] LOC284440 (Accession XP_209210.1) is another GAM895 target gene, herein designated TARGET GENE. LOC284440 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC284440, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284440 BINDING SITE, designated SEQ ID:14287, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36761] Another function of GAM895 is therefore inhibition of LOC284440 (Accession XP_209210.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284440.

[36762] LOC284530 (Accession XP_211512.1) is another GAM895 target gene, herein designated TARGET GENE. LOC284530 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284530, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284530 BINDING SITE, designated SEQ ID:11717, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36763] Another function of GAM895 is therefore inhibition of

LOC284530 (Accession XP_211512.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284530.

[36764] LOC284840 (Accession XP_211657.1) is another GAM895 target gene, herein designated TARGET GENE. LOC284840 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284840, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284840 BINDING SITE, designated SEQ ID:14102, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36765] Another function of GAM895 is therefore inhibition of LOC284840 (Accession XP_211657.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284840.

[36766] LOC284950 (Accession XP_211703.1) is another GAM895 target gene, herein designated TARGET GENE. LOC284950 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284950, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284950 BINDING SITE, designated SEQ ID:13512, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36767] Another function of GAM895 is therefore inhibition of LOC284950 (Accession XP_211703.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284950.

[36768] LOC285167 (Accession XP_211790.1) is another GAM895 target gene, herein designated TARGET GENE. LOC285167 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285167, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285167 BINDING SITE, designated SEQ ID:13845, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36769] Another function of GAM895 is therefore inhibition of LOC285167 (Accession XP_211790.1) . Accordingly, utili-

ties of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285167.

[36770] LOC285256 (Accession XP_211818.1) is another GAM895 target gene, herein designated TARGET GENE. LOC285256 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285256, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285256 BINDING SITE, designated SEQ ID:18929, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36771] Another function of GAM895 is therefore inhibition of LOC285256 (Accession XP_211818.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285256.

[36772] LOC285500 (Accession XP_209639.1) is another GAM895 target gene, herein designated TARGET GENE. LOC285500 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285500, corresponding to a target binding site such as BINDING SITE

I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285500 BINDING SITE, designated SEQ ID:17122, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36773] Another function of GAM895 is therefore inhibition of LOC285500 (Accession XP_209639.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285500.

[36774] LOC285595 (Accession XP_211948.1) is another GAM895 target gene, herein designated TARGET GENE. LOC285595 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285595, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285595 BINDING SITE, designated SEQ ID:14073, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36775] Another function of GAM895 is therefore inhibition of LOC285595 (Accession XP_211948.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285595.

[36776] LOC285656 (Accession XP_211976.2) is another GAM895 target gene, herein designated TARGET GENE. LOC285656 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285656, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285656 BINDING SITE, designated SEQ ID:14073, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36777] Another function of GAM895 is therefore inhibition of LOC285656 (Accession XP_211976.2) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285656.

[36778] LOC285954 (Accession XP_212085.1) is another GAM895 target gene, herein designated TARGET GENE. LOC285954 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285954, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of LOC285954 BINDING SITE, designated SEQ ID:1096, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36779] Another function of GAM895 is therefore inhibition of LOC285954 (Accession XP_212085.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285954.

[36780] LOC286177 (Accession XP_212215.3) is another GAM895 target gene, herein designated TARGET GENE. LOC286177 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286177, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286177 BINDING SITE, designated SEQ ID:3170, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36781] Another function of GAM895 is therefore inhibition of LOC286177 (Accession XP_212215.3) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC286177.

[36782] LOC286401 (Accession XP_212310.1) is another GAM895 target gene, herein designated TARGET GENE. LOC286401 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286401, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286401 BINDING SITE, designated SEQ ID:5918, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36783] Another function of GAM895 is therefore inhibition of LOC286401 (Accession XP_212310.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286401.

[36784] LOC286437 (Accession XP_210050.1) is another GAM895 target gene, herein designated TARGET GENE. LOC286437 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286437, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of LOC286437 BINDING SITE, designated SEQ ID:17684, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36785] Another function of GAM895 is therefore inhibition of LOC286437 (Accession XP_210050.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286437.

[36786] LOC286532 (Accession XP_210093.1) is another GAM895 target gene, herein designated TARGET GENE. LOC286532 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286532, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286532 BINDING SITE, designated SEQ ID:3346, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36787] Another function of GAM895 is therefore inhibition of LOC286532 (Accession XP_210093.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286532.

[36788] LOC339299 (Accession XP_294904.1) is another GAM895 target gene, herein designated TARGET GENE. LOC339299 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339299, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339299 BINDING SITE, designated SEQ ID:4240, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36789] Another function of GAM895 is therefore inhibition of LOC339299 (Accession XP_294904.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339299.

[36790] LOC339831 (Accession XP_295080.1) is another GAM895 target gene, herein designated TARGET GENE. LOC339831 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339831, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339831 BINDING SITE, designated SEQ ID:8112, to

the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36791] Another function of GAM895 is therefore inhibition of LOC339831 (Accession XP_295080.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339831.

[36792] LOC340327 (Accession XP_294325.1) is another GAM895 target gene, herein designated TARGET GENE. LOC340327 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340327, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340327 BINDING SITE, designated SEQ ID:3197, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36793] Another function of GAM895 is therefore inhibition of LOC340327 (Accession XP_294325.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340327.

[36794] LOC340527 (Accession XP_291321.1) is another GAM895

target gene, herein designated TARGET GENE. LOC340527 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340527, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340527 BINDING SITE, designated SEQ ID:13494, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36795] Another function of GAM895 is therefore inhibition of LOC340527 (Accession XP_291321.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340527.

[36796] LOC346259 (Accession XP_299387.1) is another GAM895 target gene, herein designated TARGET GENE. LOC346259 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC346259, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC346259 BINDING SITE, designated SEQ ID:8351, to the nucleotide sequence of GAM895 RNA, herein desig-

nated GAM RNA, also designated SEQ ID:379.

[36797] Another function of GAM895 is therefore inhibition of LOC346259 (Accession XP_299387.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC346259.

[36798] LOC348393 (Accession XP_302741.1) is another GAM895 target gene, herein designated TARGET GENE. LOC348393 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348393, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348393 BINDING SITE, designated SEQ ID:9564, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36799] Another function of GAM895 is therefore inhibition of LOC348393 (Accession XP_302741.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348393.

[36800] LOC348475 (Accession XP_300748.1) is another GAM895 target gene, herein designated TARGET GENE. LOC348475

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348475, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348475 BINDING SITE, designated SEQ ID:18223, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36801] Another function of GAM895 is therefore inhibition of LOC348475 (Accession XP_300748.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348475.

[36802] LOC348532 (Accession XP_302818.1) is another GAM895 target gene, herein designated TARGET GENE. LOC348532 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348532, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348532 BINDING SITE, designated SEQ ID:9564, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36803] Another function of GAM895 is therefore inhibition of LOC348532 (Accession XP_302818.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348532.

[36804] LOC348989 (Accession XP_302935.1) is another GAM895 target gene, herein designated TARGET GENE. LOC348989 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348989, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348989 BINDING SITE, designated SEQ ID:14073, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36805] Another function of GAM895 is therefore inhibition of LOC348989 (Accession XP_302935.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348989.

[36806] LOC349254 (Accession XP_300471.1) is another GAM895 target gene, herein designated TARGET GENE. LOC349254 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by LOC349254, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349254 BINDING SITE, designated SEQ ID:11021, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36807] Another function of GAM895 is therefore inhibition of LOC349254 (Accession XP_300471.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349254.

[36808] LOC349327 (Accession XP_300483.1) is another GAM895 target gene, herein designated TARGET GENE. LOC349327 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349327, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349327 BINDING SITE, designated SEQ ID:11021, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36809] Another function of GAM895 is therefore inhibition of

LOC349327 (Accession XP_300483.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349327.

[36810] LOC92973 (Accession XP_048529.2) is another GAM895 target gene, herein designated TARGET GENE. LOC92973 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC92973, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC92973 BINDING SITE, designated SEQ ID:1682, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36811] Another function of GAM895 is therefore inhibition of LOC92973 (Accession XP_048529.2) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC92973.

[36812] LSM6 (Accession NP_009011.1) is another GAM895 target gene, herein designated TARGET GENE. LSM6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LSM6, corresponding to a

target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LSM6 BINDING SITE, designated SEQ ID:8191, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36813] Another function of GAM895 is therefore inhibition of LSM6 (Accession NP_009011.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LSM6.

[36814] Melanoma antigen, family a, 12 (MAGEA12, Accession NP_005358.1) is another GAM895 target gene, herein designated TARGET GENE. MAGEA12 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MAGEA12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAGEA12 BINDING SITE, designated SEQ ID:14575, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36815] Another function of GAM895 is therefore inhibition of Melanoma antigen, family a, 12 (MAGEA12, Accession

NP_005358.1), a gene which may play a role in tumor transformation or aspects of tumor progression and therefore may be associated with Melanoma. Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of Melanoma, and of other diseases and clinical conditions associated with MAGEA12.

[36816] The function of MAGEA12 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM499.2.Melanoma antigen, family a, 3 (MAGEA3, Accession NP_005353.1) is another GAM895 target gene, herein designated TARGET GENE. MAGEA3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MAGEA3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAGEA3 BINDING SITE, designated SEQ ID:14575, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36817] Another function of GAM895 is therefore inhibition of Melanoma antigen, family a, 3 (MAGEA3, Accession NP_005353.1), a gene which may play a role in embryonal

development and tumor transformation or aspects of tumor progression. antigen recognized on a melanoma by autologous cytolytic t lymphocytes. Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAGEA3.

[36818] The function of MAGEA3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM842.2.Melanoma antigen, family a, 6 (MAGEA6, Accession NP_787064.1) is another GAM895 target gene, herein designated TARGET GENE. MAGEA6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAGEA6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAGEA6 BINDING SITE, designated SEQ ID:14575, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36819] Another function of GAM895 is therefore inhibition of Melanoma antigen, family a, 6 (MAGEA6, Accession NP_787064.1) . Accordingly, utilities of GAM895 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with MAGEA6.

[36820] Melanoma antigen, family a, 6 (MAGEA6, Accession NP_005354.1) is another GAM895 target gene, herein designated TARGET GENE. MAGEA6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MAGEA6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAGEA6 BINDING SITE, designated SEQ ID:14575, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36821] Another function of GAM895 is therefore inhibition of Melanoma antigen, family a, 6 (MAGEA6, Accession NP_005354.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAGEA6.

[36822] Melanoma antigen, family a, 9 (MAGEA9, Accession NP_005356.1) is another GAM895 target gene, herein designated TARGET GENE. MAGEA9 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MAGEA9, corresponding to a target

binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MAGEA9 BINDING SITE, designated SEQ ID:7705, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36823] Another function of GAM895 is therefore inhibition of Melanoma antigen, family a, 9 (MAGEA9, Accession NP_005356.1), a gene which may play a role in embryonal development and tumor transformation or aspects of tumor progression. Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MAGEA9.

[36824] The function of MAGEA9 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM207.2.MDC1 (Accession NP_055456.1) is another GAM895 target gene, herein designated TARGET GENE. MDC1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MDC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of MDC1 BINDING SITE, designated SEQ ID:4580, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36825] Another function of GAM895 is therefore inhibition of MDC1 (Accession NP_055456.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MDC1.

[36826] Methyl cpg binding protein 2 (rett syndrome) (MECP2, Accession NP_004983.1) is another GAM895 target gene, herein designated TARGET GENE. MECP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MECP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MECP2 BINDING SITE, designated SEQ ID:534, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36827] Another function of GAM895 is therefore inhibition of Methyl cpg binding protein 2 (rett syndrome) (MECP2, Accession NP_004983.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MECP2.

[36828] MGC15827 (Accession NP_116271.1) is another GAM895 target gene, herein designated TARGET GENE. MGC15827 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC15827, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC15827 BINDING SITE, designated SEQ ID:14513, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36829] Another function of GAM895 is therefore inhibition of MGC15827 (Accession NP_116271.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC15827.

[36830] MGC4562 (Accession NP_588616.1) is another GAM895 target gene, herein designated TARGET GENE. MGC4562 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC4562, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC4562 BINDING SITE, designated SEQ ID:4552, to the

nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36831] Another function of GAM895 is therefore inhibition of MGC4562 (Accession NP_588616.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC4562.

[36832] Myosin va (heavy polypeptide 12, myoxin) (MYO5A, Accession NP_000250.1) is another GAM895 target gene, herein designated TARGET GENE. MYO5A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MYO5A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYO5A BINDING SITE, designated SEQ ID:18843, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36833] Another function of GAM895 is therefore inhibition of Myosin va (heavy polypeptide 12, myoxin) (MYO5A, Accession NP_000250.1), a gene which may have a role in intracellular transport. and therefore may be associated with Griscelli syndrome. Accordingly, utilities of GAM895

include diagnosis, prevention and treatment of Griscelli syndrome., and of other diseases and clinical conditions associated with MYO5A.

[36834] The function of MYO5A has been established by previous studies. Engle and Kennett (1994) cloned the human homolog of the 'dilute' gene and assigned it to human chromosome 15 by Southern blot analysis of a panel of human/rodent somatic cell hybrids. The 'dilute' gene maps to mouse chromosome 9, distal to a group of 3 loci of which the human homologs are located in the region 15q22- q26. Engle and Kennett (1994) suggested Griscelli syndrome (OMIM Ref. No. 214450) and neuroectodermal melanolysosomal disease (OMIM Ref. No. 256710) as candidates for mutations in the myoxin gene. By somatic cell hybrid analysis and in situ hybridization, Moore et al. (1995) mapped the MYH12 gene to 15q21, thus extending distally the region of chromosome 15 with homology of synteny to mouse chromosome 9.

[36835] Animal model experiments lend further support to the function of MYO5A. The 'flailer' (flr) mouse exhibits a phenotype consisting of frequent falling, convulsive limb movements (leg flailing), and ataxia persistent into adulthood. The phenotype is similar to that of homozygotes for

null alleles of Myo5a. Jones et al. (2000) determined that the flailer mouse expresses a novel gene combining the promoter and first 2 exons of guanine nucleotide- binding protein beta- 5 (GNB5; 604447) with the C- terminal exons of the closely linked myosin- 5A (MyoVA) gene (Myo5a). Biochemical and genetic studies indicated that the flailer protein, which is expressed predominantly in brain, competes with wildtype MyoVA in vivo, preventing the localization of smooth endoplasmic reticulum vesicles in the dendritic spines of cerebellar Purkinje cells. The flailer protein thus has a dominant- negative mechanism of action with a recessive mode of inheritance due to the dependence of competitive binding on the ratio between mutant and wildtype proteins. The chromosomal arrangement of Myo5a upstream of Gnb5 is consistent with non-homologous recombination as the mutational mechanism.

[36836] It is appreciated that the abovementioned animal model for MYO5A is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[36837] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[36838] Jones, J. M.; Huang, J.- D.; Mermall, V.; Hamilton, B. A.; Mooseker, M. S.; Escayg, A.; Copeland, N. G.; Jenkins, N. A.; Meisler, M. H. : The mouse neurological mutant flailer expresses a novel hybrid gene derived by exon shuffling between Gnb5 and Myo5a. Hum. Molec. Genet. 9: 821-828, 2000. ; and

[36839] Pastural, E.; Barrat, F. J.; Dufourcq- Lagelouse, R.; Certain, S.; Sanal, O.; Jabado, N.; Seger, R.; Griscelli, C.; Fischer, A.; de Saint Basile, G. : Griscelli disease maps to chromoso.

[36840] Further studies establishing the function and utilities of MYO5A are found in John Hopkins OMIM database record ID 160777, and in cited publications listed in Table 5, which are hereby incorporated by reference.Myozenin 3 (MYOZ3, Accession NP_588612.1) is another GAM895 target gene, herein designated TARGET GENE. MYOZ3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MYOZ3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYOZ3 BINDING SITE, designated SEQ ID:11685, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36841] Another function of GAM895 is therefore inhibition of Myozenin 3 (MYOZ3, Accession NP_588612.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYOZ3.

[36842] MYST2 (Accession NP_008998.1) is another GAM895 target gene, herein designated TARGET GENE. MYST2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MYST2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MYST2 BINDING SITE, designated SEQ ID:3346, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36843] Another function of GAM895 is therefore inhibition of MYST2 (Accession NP_008998.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MYST2.

[36844] Ndrg family member 4 (NDRG4, Accession NP_075061.1) is another GAM895 target gene, herein designated TARGET GENE. NDRG4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts

of mRNA encoded by NDRG4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NDRG4 BINDING SITE, designated SEQ ID:12095, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36845] Another function of GAM895 is therefore inhibition of Ndrg family member 4 (NDRG4, Accession NP_075061.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NDRG4.

[36846] Ndrg family member 4 (NDRG4, Accession NP_065198.1) is another GAM895 target gene, herein designated TARGET GENE. NDRG4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by NDRG4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NDRG4 BINDING SITE, designated SEQ ID:12095, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36847] Another function of GAM895 is therefore inhibition of Ndrg family member 4 (NDRG4, Accession NP_065198.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NDRG4.

[36848] Niemann-pick disease, type c2 (NPC2, Accession NP_006423.1) is another GAM895 target gene, herein designated TARGET GENE. NPC2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NPC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NPC2 BINDING SITE, designated SEQ ID:10948, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36849] Another function of GAM895 is therefore inhibition of Niemann-pick disease, type c2 (NPC2, Accession NP_006423.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NPC2.

[36850] Nad(p)h dehydrogenase, quinone 1 (NQO1, Accession NP_000894.1) is another GAM895 target gene, herein

designated TARGET GENE. NQO1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NQO1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NQO1 BINDING SITE, designated SEQ ID:13009, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36851] Another function of GAM895 is therefore inhibition of Nad(p)h dehydrogenase, quinone 1 (NQO1, Accession NP_000894.1), a gene which is cytochrome b5 reductase which reduces redox dyes and quinones. Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NQO1.

[36852] The function of NQO1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.5'-nucleotidase, ecto (cd73) (NT5E, Accession NP_002517.1) is another GAM895 target gene, herein designated TARGET GENE. NT5E BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by NT5E, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NT5E BINDING SITE, designated SEQ ID:17625, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36853] Another function of GAM895 is therefore inhibition of 5'-nucleotidase, ecto (cd73) (NT5E, Accession NP_002517.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NT5E.

[36854] P5 (Accession NP_005733.1) is another GAM895 target gene, herein designated TARGET GENE. P5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by P5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of P5 BINDING SITE, designated SEQ ID:17994, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36855] Another function of GAM895 is therefore inhibition of P5

(Accession NP_005733.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with P5.

[36856] Protein phosphatase 3 (formerly 2b), catalytic subunit, alpha isoform (calcineurin a alpha) (PPP3CA, Accession NP_000935.1) is another GAM895 target gene, herein designated TARGET GENE. PPP3CA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PPP3CA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPP3CA BINDING SITE, designated SEQ ID:4752, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36857] Another function of GAM895 is therefore inhibition of Protein phosphatase 3 (formerly 2b), catalytic subunit, alpha isoform (calcineurin a alpha) (PPP3CA, Accession NP_000935.1), a gene which is the catalytic subunit of calcium- dependent, calmodulin- stimulated protein phosphatase. Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PPP3CA.

[36858] The function of PPP3CA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM451.1.Protein kinase, y-linked (PRKY, Accession NP_002751.1) is another GAM895 target gene, herein designated TARGET GENE. PRKY BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRKY, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRKY BINDING SITE, designated SEQ ID:19311, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36859] Another function of GAM895 is therefore inhibition of Protein kinase, y-linked (PRKY, Accession NP_002751.1), a gene which is a putative protein kinase. Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRKY.

[36860] The function of PRKY and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM72.1.Protein s (alpha) (PROS1, Accession NP_000304.1) is another GAM895 target gene, herein designated TARGET GENE. PROS1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PROS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PROS1 BINDING SITE, designated SEQ ID:1078, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36861] Another function of GAM895 is therefore inhibition of Protein s (alpha) (PROS1, Accession NP_000304.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PROS1.

[36862] Prostaglandin d2 receptor (dp) (PTGDR, Accession NP_000944.1) is another GAM895 target gene, herein designated TARGET GENE. PTGDR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PTGDR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTGDR BINDING SITE, designated

SEQ ID:1012, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36863] Another function of GAM895 is therefore inhibition of Prostaglandin d2 receptor (dp) (PTGDR, Accession NP_000944.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTGDR.

[36864] Peroxisomal farnesylated protein (PXF, Accession NP_002848.1) is another GAM895 target gene, herein designated TARGET GENE. PXF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PXF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PXF BINDING SITE, designated SEQ ID:17226, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36865] Another function of GAM895 is therefore inhibition of Peroxisomal farnesylated protein (PXF, Accession NP_002848.1), a gene which may function in peroxisomal biogenesis or assembly and therefore may be associated with Peroxisome biogenesis disorder (pbd). Accordingly,

utilities of GAM895 include diagnosis, prevention and treatment of Peroxisome biogenesis disorder (pbd), and of other diseases and clinical conditions associated with PXF.

[36866] The function of PXF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM96.1.Rab5a, member ras oncogene family (RAB5A, Accession NP_004153.2) is another GAM895 target gene, herein designated TARGET GENE. RAB5A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAB5A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAB5A BINDING SITE, designated SEQ ID:3629, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36867] Another function of GAM895 is therefore inhibition of Rab5a, member ras oncogene family (RAB5A, Accession NP_004153.2), a gene which is a rate- limiting component of the machinery regulating the kinetics of membrane traffic. Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical condi-

tions associated with RAB5A.

[36868] The function of RAB5A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.Rap2a, member of ras oncogene family (RAP2A, Accession NP_066361.1) is another GAM895 target gene, herein designated TARGET GENE. RAP2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RAP2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RAP2A BINDING SITE, designated SEQ ID:8623, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36869] Another function of GAM895 is therefore inhibition of Rap2a, member of ras oncogene family (RAP2A, Accession NP_066361.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RAP2A.

[36870] Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_739580.1) is another GAM895 target gene, herein designated TARGET GENE. RASSF2 BINDING SITE is

a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RASSF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RASSF2 BINDING SITE, designated SEQ ID:16173, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36871] Another function of GAM895 is therefore inhibition of Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_739580.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RASSF2.

[36872] Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_739579.1) is another GAM895 target gene, herein designated TARGET GENE. RASSF2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RASSF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RASSF2 BINDING SITE, designated SEQ ID:16173, to the nucleotide sequence of GAM895 RNA, herein designated

GAM RNA, also designated SEQ ID:379.

[36873] Another function of GAM895 is therefore inhibition of Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_739579.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RASSF2.

[36874] Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_055552.1) is another GAM895 target gene, herein designated TARGET GENE. RASSF2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by RASSF2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RASSF2 BINDING SITE, designated SEQ ID:16173, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36875] Another function of GAM895 is therefore inhibition of Ras association (ralgds/af-6) domain family 2 (RASSF2, Accession NP_055552.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RASSF2.

[36876] Seryl-trna synthetase 2 (SARS2, Accession NP_060297.1)

is another GAM895 target gene, herein designated TARGET GENE. SARS2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SARS2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SARS2 BINDING SITE, designated SEQ ID:3298, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36877] Another function of GAM895 is therefore inhibition of Seryl-trna synthetase 2 (SARS2, Accession NP_060297.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SARS2.

[36878] Sec23 homolog b (s. cerevisiae) (SEC23B, Accession NP_116781.1) is another GAM895 target gene, herein designated TARGET GENE. SEC23B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SEC23B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEC23B BINDING SITE, designated SEQ ID:505, to the nu-

cleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36879] Another function of GAM895 is therefore inhibition of Sec23 homolog b (s. cerevisiae) (SEC23B, Accession NP_116781.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEC23B.

[36880] Sec23 homolog b (s. cerevisiae) (SEC23B, Accession NP_006354.2) is another GAM895 target gene, herein designated TARGET GENE. SEC23B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SEC23B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEC23B BINDING SITE, designated SEQ ID:505, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36881] Another function of GAM895 is therefore inhibition of Sec23 homolog b (s. cerevisiae) (SEC23B, Accession NP_006354.2) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEC23B.

[36882] Sec23 homolog b (s. cerevisiae) (SEC23B, Accession NP_116780.1) is another GAM895 target gene, herein designated TARGET GENE. SEC23B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SEC23B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SEC23B BINDING SITE, designated SEQ ID:505, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36883] Another function of GAM895 is therefore inhibition of Sec23 homolog b (s. cerevisiae) (SEC23B, Accession NP_116780.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SEC23B.

[36884] Sideroflexin 1 (SFXN1, Accession NP_073591.2) is another GAM895 target gene, herein designated TARGET GENE. SFXN1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SFXN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences

of SFXN1 BINDING SITE, designated SEQ ID:4597, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36885] Another function of GAM895 is therefore inhibition of Sideroflexin 1 (SFXN1, Accession NP_073591.2) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SFXN1.

[36886] Siat7c (Accession NP_694541.1) is another GAM895 target gene, herein designated TARGET GENE. Siat7c BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by Siat7c, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of Siat7c BINDING SITE, designated SEQ ID:3113, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36887] Another function of GAM895 is therefore inhibition of Siat7c (Accession NP_694541.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Siat7c.

[36888] S-phase kinase-associated protein 1a (p19a) (SKP1A, Ac-

cession NP_008861.2) is another GAM895 target gene, herein designated TARGET GENE. SKP1A BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SKP1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SKP1A BINDING SITE, designated SEQ ID:19958, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36889] Another function of GAM895 is therefore inhibition of S-phase kinase-associated protein 1a (p19a) (SKP1A, Accession NP_008861.2) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SKP1A.

[36890] S-phase kinase-associated protein 1a (p19a) (SKP1A, Accession NP_733779.1) is another GAM895 target gene, herein designated TARGET GENE. SKP1A BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SKP1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

SKP1A BINDING SITE, designated SEQ ID:19958, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36891] Another function of GAM895 is therefore inhibition of S-phase kinase-associated protein 1a (p19a) (SKP1A, Accession NP_733779.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SKP1A.

[36892] Spermatogenesis associated 2 (SPATA2, Accession NP_006029.1) is another GAM895 target gene, herein designated TARGET GENE. SPATA2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SPATA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPATA2 BINDING SITE, designated SEQ ID:17327, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36893] Another function of GAM895 is therefore inhibition of Spermatogenesis associated 2 (SPATA2, Accession NP_006029.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with SPATA2.

[36894] SRGAP1 (Accession XP_051143.3) is another GAM895 target gene, herein designated TARGET GENE. SRGAP1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SRGAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SRGAP1 BINDING SITE, designated SEQ ID:6087, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36895] Another function of GAM895 is therefore inhibition of SRGAP1 (Accession XP_051143.3) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SRGAP1.

[36896] Signal transducer and activator of transcription 1, 91kda (STAT1, Accession NP_009330.1) is another GAM895 target gene, herein designated TARGET GENE. STAT1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by STAT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of STAT1 BINDING SITE, designated SEQ ID:14937, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36897] Another function of GAM895 is therefore inhibition of Signal transducer and activator of transcription 1, 91kda (STAT1, Accession NP_009330.1), a gene which is involved in transcriptional regulation. Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with STAT1.

[36898] The function of STAT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1.Synaptotagmin vi (SYT6, Accession XP_086135.1) is another GAM895 target gene, herein designated TARGET GENE. SYT6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SYT6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SYT6 BINDING SITE, designated SEQ ID:9597, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36899] Another function of GAM895 is therefore inhibition of Synaptotagmin vi (SYT6, Accession XP_086135.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SYT6.

[36900] Tbc1 domain family, member 4 (TBC1D4, Accession NP_055647.1) is another GAM895 target gene, herein designated TARGET GENE. TBC1D4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TBC1D4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TBC1D4 BINDING SITE, designated SEQ ID:14754, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36901] Another function of GAM895 is therefore inhibition of Tbc1 domain family, member 4 (TBC1D4, Accession NP_055647.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TBC1D4.

[36902] T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065575.1) is another GAM895 target gene, herein

designated TARGET GENE. TCL6 BINDING SITE1 and TCL6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TCL6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL6 BINDING SITE1 and TCL6 BINDING SITE2, designated SEQ ID:779 and SEQ ID:5137 respectively, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36903] Another function of GAM895 is therefore inhibition of T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065575.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCL6.

[36904] T-cell leukemia/lymphoma 6 (TCL6, Accession NP_055233.1) is another GAM895 target gene, herein designated TARGET GENE. TCL6 BINDING SITE1 and TCL6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TCL6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of TCL6 BINDING SITE1 and TCL6 BINDING SITE2, designated SEQ ID:5137 and SEQ ID:779 respectively, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36905] Another function of GAM895 is therefore inhibition of T-cell leukemia/lymphoma 6 (TCL6, Accession NP_055233.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCL6.

[36906] T-cell leukemia/lymphoma 6 (TCL6, Accession NP_065577.2) is another GAM895 target gene, herein designated TARGET GENE. TCL6 BINDING SITE1 and TCL6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TCL6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL6 BINDING SITE1 and TCL6 BINDING SITE2, designated SEQ ID:779 and SEQ ID:5137 respectively, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36907] Another function of GAM895 is therefore inhibition of T-cell leukemia/lymphoma 6 (TCL6, Accession

NP_065577.2) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCL6.

[36908] T-cell leukemia/lymphoma 6 (TCL6, Accession NP_036600.2) is another GAM895 target gene, herein designated TARGET GENE. TCL6 BINDING SITE1 and TCL6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by TCL6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TCL6 BINDING SITE1 and TCL6 BINDING SITE2, designated SEQ ID:5137 and SEQ ID:779 respectively, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36909] Another function of GAM895 is therefore inhibition of T-cell leukemia/lymphoma 6 (TCL6, Accession NP_036600.2) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TCL6.

[36910] TPT (Accession NP_055132.1) is another GAM895 target gene, herein designated TARGET GENE. TPT BINDING SITE is a target binding site found in the 3` untranslated re-

gion of mRNA encoded by TPT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TPT BINDING SITE, designated SEQ ID:17162, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36911] Another function of GAM895 is therefore inhibition of TPT (Accession NP_055132.1), a gene which Moderately similar to decaprenyl diphosphate synthase (S. pombe dps) and therefore may be associated with Triphalangeal thumb- polysyndactyly syndrome. Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of Triphalangeal thumb- polysyndactyly syndrome, and of other diseases and clinical conditions associated with TPT.

[36912] The function of TPT has been established by previous studies. Nicolai and Hamel (1988) described a large family in which multiple members exhibited a spectrum of pre- and postaxial anomalies of the limbs inherited as an autosomal dominant. In another study of this family, Tsukurov et al. (1994) found linkage of the malformation to a highly polymorphic locus containing a short tandem repeat sequence (STR), D7S550, located at 7q36; maximum lod

score = 6.85 at theta = 0.0. This region is homologous to a segment of mouse chromosome 5 where 2 nonallelic mutations, 'hammer- toe' (Hm) and 'hemimelic extra toes' (Hx), have been mapped. In the family reported by Tsukurov et al. (1994), hand malformations were typically bilateral but usually asymmetric. Both pre- and postaxial polydactyly and syndactyly were present. In all affected individuals the thumb was triphalangeal and the index finger was normal. Malformations of the feet were present in some affected persons but were usually less severe than those observed in the hands. Variable expression of the disease gene was demonstrated by asymmetries in limb deformities of affected individuals and the differences observed between monozygotic twins. Heus et al. (1999) constructed a detailed physical map of the candidate region for this form of preaxial polydactyly. They used a combination of methods to identify and position 11 transcripts within this map. By recombination analysis on families with preaxial polydactyly, they reduced the candidate region to approximately 450 kb. Mapping to the refined candidate region were the homeo box gene HLXB9 (OMIM Ref. No. 142994), a putative receptor (C7ORF2; 605522), and 2 transcripts of unknown function. All 4

transcripts were analyzed and sequenced in patients with preaxial polydactyly, but no pathogenic mutations were identified. Balci et al. (1999) described a Turkish family with triphalangeal thumb- polysyndactyly syndrome. Characteristic findings in this family were triphalangeal thumb, webbing between third, fourth, and fifth fingers associated with bony synostosis in the distal phalanges of the same fingers, and pre- and postaxial polysyndactyly of the feet. Some affected members of the family showed a more severe phenotype with complete syndactyly of all fingers giving a 'cup- like' appearance to the hands. Genetic linkage studies demonstrated linkage to 7q36. Kantaputra and Chalidapong (2000) reported a Thai man who had triphalangeal thumb- polysyndactyly syndrome and his daughter who had tibial hemimelia- polysyndactyly-triphalangeal thumb syndrome (OMIM Ref. No. 188770). The authors proposed that these conditions are actually the same disorder with wide variability. They suggested this condition be called 'tibial hemimelia- polysyndactyly-triphalangeal thumbs syndrome.'

[36913]

[36914] Full details of the abovementioned studies are described in the following publications, the disclosure of which are

hereby incorporated by reference:

[36915] Kantaputra, P. N.; Chalidapong, P. : Are triphalangeal thumb- polysyndactyly syndrome (TPTPS) and tibial hemimelia- polysyndactyly- triphalangeal thumb syndrome (THPTTS) identical?: A father with TPTPS and his daughter with THPTTS in a Thai family. Am. J. Med. Genet. 93: 126- 131, 2000. ; and

[36916] Nicolai, J.- P. A.; Hamel, B. C. J. : A family with complex bilateral polysyndactyly. J. Hand Surg. 13A: 405- 407, 1988.

[36917] Further studies establishing the function and utilities of TPT are found in John Hopkins OMIM database record ID 190605, and in cited publications listed in Table 5, which are hereby incorporated by reference.Unc-5 homolog d (c. elegans) (UNC5D, Accession NP_543148.1) is another GAM895 target gene, herein designated TARGET GENE. UNC5D BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by UNC5D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of UNC5D BINDING SITE, designated SEQ ID:20188, to the nucleotide sequence of GAM895 RNA, herein designated

GAM RNA, also designated SEQ ID:379.

[36918] Another function of GAM895 is therefore inhibition of Unc-5 homolog d (c. elegans) (UNC5D, Accession NP_543148.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with UNC5D.

[36919] Vent-like homeobox 2 (VENTX2, Accession NP_055283.1) is another GAM895 target gene, herein designated TARGET GENE. VENTX2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VENTX2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VENTX2 BINDING SITE, designated SEQ ID:6385, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36920] Another function of GAM895 is therefore inhibition of Vent-like homeobox 2 (VENTX2, Accession NP_055283.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VENTX2.

[36921] ZNF-kaiso (Accession NP_006768.1) is another GAM895 target gene, herein designated TARGET GENE. ZNF-kaiso

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ZNF-kaiso, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZNF-kaiso BINDING SITE, designated SEQ ID:3272, to the nucleotide sequence of GAM895 RNA, herein designated GAM RNA, also designated SEQ ID:379.

[36922] Another function of GAM895 is therefore inhibition of ZNF-kaiso (Accession NP_006768.1) . Accordingly, utilities of GAM895 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZNF-kaiso.

[36923]

[36924] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 1032 (GAM1032), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[36925] GAM1032 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM1032 was detected is described hereinabove

with reference to Figs. 8-15.

[36926] GAM1032 gene, herein designated GAM GENE, and GAM1032 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[36927] GAM1032 gene encodes a GAM1032 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM1032 precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM1032 precursor RNA is designated SEQ ID:169, and is provided hereinbelow with reference to the sequence listing part. Nucleotide sequence SEQ ID:169 is located at position 141427181 relative to chromosome 8.

[36928] GAM1032 precursor RNA folds onto itself, forming GAM1032 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[36929] GAM1032 precursor RNA folds onto itself, forming

GAM1032 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[36930] Nucleotide sequence of GAM1032 precursor RNA, designated SEQ-ID: 169, and a schematic representation of a predicted secondary folding of GAM1032 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[36931] An enzyme complex designated DICER COMPLEX, `dices` the GAM1032 folded precursor RNA into GAM1032 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: A) nucleotide sequence of GAM1032 RNA is designated SEQ ID:303, and is provided hereinbelow with refer-

ences to the sequence listing part and Table 3, hereby incorporated by reference.

[36932] GAM1032 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM1032 target RNA, herein designated GAM TARGET RNA. GAM1032 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, designated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[36933] GAM1032 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM1032 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM1032 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM1032 RNA may have a different number of target binding sites in untranslated regions of a GAM1032 target

RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[36934] The complementary binding of GAM1032 RNA, herein designated GAM RNA, to target binding sites on GAM1032 target RNA, herein designated GAM TARGET RNA, such as BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM1032 target RNA into GAM1032 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[36935] It is appreciated that GAM1032 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM1032 target genes. The mRNA of each one of this plurality of GAM1032 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM1032 RNA, herein designated GAM RNA, and which when bound by GAM1032 RNA causes inhibition of translation of respective one or more GAM1032 target proteins.

[36936] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with

specific reference to translational inhibition exerted by GAM1032 gene, herein designated GAM GENE, on one or more GAM1032 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[36937] It is appreciated that specific functions and accordingly utilities of GAM1032 correlate with, and may be deduced from, the identity of the target genes which GAM1032 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[36938]

[36939]

[36940] Acid phosphatase 1, soluble (ACP1, Accession

NP_004291.1) is a GAM1032 target gene, herein designated TARGET GENE. ACP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACP1 BINDING SITE, designated SEQ ID:2659, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36941] A function of GAM1032 is therefore inhibition of Acid phosphatase 1, soluble (ACP1, Accession NP_004291.1), a gene which as demonstrated in starch- gel electrophoresis. and therefore may be associated with Acid phosphatase 1, soluble, a/b polymorphism of. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of Acid phosphatase 1, soluble, a/b polymorphism of, and of other diseases and clinical conditions associated with ACP1.

[36942] The function of ACP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Acid phosphatase 1, soluble (ACP1, Accession

NP_009030.1) is another GAM1032 target gene, herein designated TARGET GENE. ACP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACP1 BINDING SITE, designated SEQ ID:2659, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36943] Another function of GAM1032 is therefore inhibition of Acid phosphatase 1, soluble (ACP1, Accession NP_009030.1), a gene which as demonstrated in starch-gel electrophoresis. and therefore may be associated with Acid phosphatase 1, soluble, a/b polymorphism of. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of Acid phosphatase 1, soluble, a/b polymorphism of, and of other diseases and clinical conditions associated with ACP1.

[36944] The function of ACP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Acid phosphatase 1, soluble (ACP1, Accession

NP_808222.1) is another GAM1032 target gene, herein designated TARGET GENE. ACP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ACP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACP1 BINDING SITE, designated SEQ ID:2659, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36945] Another function of GAM1032 is therefore inhibition of Acid phosphatase 1, soluble (ACP1, Accession NP_808222.1), a gene which as demonstrated in starch-gel electrophoresis. and therefore may be associated with Acid phosphatase 1, soluble, a/b polymorphism of. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of Acid phosphatase 1, soluble, a/b polymorphism of, and of other diseases and clinical conditions associated with ACP1.

[36946] The function of ACP1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Adenylate cyclase 1 (brain) (ADCY1, Acces-

sion NP_066939.1) is another GAM1032 target gene, herein designated TARGET GENE. ADCY1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ADCY1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ADCY1 BINDING SITE, designated SEQ ID:5742, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36947] Another function of GAM1032 is therefore inhibition of Adenylate cyclase 1 (brain) (ADCY1, Accession NP_066939.1), a gene which a calmodulin- sensitive adenylyl cyclase. it may play a role in memory acquisition and learning. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ADCY1.

[36948] The function of ADCY1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM144.1.Amyotrophic lateral sclerosis 2 (juvenile) (ALS2, Accession NP_065970.1) is another GAM1032 target gene, herein designated TARGET GENE. ALS2 BINDING

SITE is a target binding site found in the 5` untranslated region of mRNA encoded by ALS2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALS2 BINDING SITE, designated SEQ ID:5747, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36949] Another function of GAM1032 is therefore inhibition of Amyotrophic lateral sclerosis 2 (juvenile) (ALS2, Accession NP_065970.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALS2.

[36950] Angiomotin (AMOT, Accession NP_573572.1) is another GAM1032 target gene, herein designated TARGET GENE. AMOT BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by AMOT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AMOT BINDING SITE, designated SEQ ID:4436, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36951] Another function of GAM1032 is therefore inhibition of Angiomotin (AMOT, Accession NP_573572.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AMOT.

[36952] ANKT (Accession NP_057443.1) is another GAM1032 target gene, herein designated TARGET GENE. ANKT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ANKT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ANKT BINDING SITE, designated SEQ ID:15792, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36953] Another function of GAM1032 is therefore inhibition of ANKT (Accession NP_057443.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ANKT.

[36954] ANKT (Accession NP_060924.4) is another GAM1032 target gene, herein designated TARGET GENE. ANKT BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ANKT,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ANKT BINDING SITE, designated SEQ ID:15792, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36955] Another function of GAM1032 is therefore inhibition of ANKT (Accession NP_060924.4) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ANKT.

[36956] Apolipoprotein l, 6 (APOL6, Accession NP_085144.1) is another GAM1032 target gene, herein designated TARGET GENE. APOL6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APOL6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APOL6 BINDING SITE, designated SEQ ID:19543, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36957] Another function of GAM1032 is therefore inhibition of Apolipoprotein l, 6 (APOL6, Accession NP_085144.1) . Accordingly, utilities of GAM1032 include diagnosis, preven-

tion and treatment of diseases and clinical conditions associated with APOL6.

[36958] Bardet-biedl syndrome 4 (BBS4, Accession NP_149017.2) is another GAM1032 target gene, herein designated TARGET GENE. BBS4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BBS4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BBS4 BINDING SITE, designated SEQ ID:12747, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36959] Another function of GAM1032 is therefore inhibition of Bardet-biedl syndrome 4 (BBS4, Accession NP_149017.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BBS4.

[36960] BG1 (Accession NP_055977.3) is another GAM1032 target gene, herein designated TARGET GENE. BG1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of BG1 BINDING SITE, designated SEQ ID:19594, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36961] Another function of GAM1032 is therefore inhibition of BG1 (Accession NP_055977.3) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BG1.

[36962] Biphenyl hydrolase-like (serine hydrolase; breast epithelial mucin-associated antigen) (BPHL, Accession NP_004323.1) is another GAM1032 target gene, herein designated TARGET GENE. BPHL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BPHL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BPHL BINDING SITE, designated SEQ ID:4510, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36963] Another function of GAM1032 is therefore inhibition of Biphenyl hydrolase-like (serine hydrolase; breast epithelial mucin-associated antigen) (BPHL, Accession

NP_004323.1), a gene which involves in detoxification processes. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BPHL.

[36964] The function of BPHL and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Chromosome 15 open reading frame 12 (C15orf12, Accession NP_060755.1) is another GAM1032 target gene, herein designated TARGET GENE. C15orf12 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C15orf12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C15orf12 BINDING SITE, designated SEQ ID:10592, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36965] Another function of GAM1032 is therefore inhibition of Chromosome 15 open reading frame 12 (C15orf12, Accession NP_060755.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C15orf12.

[36966] Chromosome 17 open reading frame 28 (C17orf28, Accession NP_085133.1) is another GAM1032 target gene, herein designated TARGET GENE. C17orf28 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C17orf28, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C17orf28 BINDING SITE, designated SEQ ID:6729, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36967] Another function of GAM1032 is therefore inhibition of Chromosome 17 open reading frame 28 (C17orf28, Accession NP_085133.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C17orf28.

[36968] Chromosome 1 open reading frame 21 (C1orf21, Accession NP_110433.1) is another GAM1032 target gene, herein designated TARGET GENE. C1orf21 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C1orf21, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of C1orf21 BINDING SITE, designated SEQ ID:17052, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36969] Another function of GAM1032 is therefore inhibition of Chromosome 1 open reading frame 21 (C1orf21, Accession NP_110433.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf21.

[36970] Chromosome 20 open reading frame 129 (C20orf129, Accession NP_112181.1) is another GAM1032 target gene, herein designated TARGET GENE. C20orf129 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C20orf129, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf129 BINDING SITE, designated SEQ ID:11258, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36971] Another function of GAM1032 is therefore inhibition of Chromosome 20 open reading frame 129 (C20orf129, Accession NP_112181.1) . Accordingly, utilities of GAM1032

include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf129.

[36972] Chromosome 20 open reading frame 161 (C20orf161, Accession NP_219489.1) is another GAM1032 target gene, herein designated TARGET GENE. C20orf161 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by C20orf161, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf161 BINDING SITE, designated SEQ ID:10164, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36973] Another function of GAM1032 is therefore inhibition of Chromosome 20 open reading frame 161 (C20orf161, Accession NP_219489.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C20orf161.

[36974] Chromosome 21 open reading frame 97 (C21orf97, Accession NP_068760.1) is another GAM1032 target gene, herein designated TARGET GENE. C21orf97 BINDING SITE is a target binding site found in the 3` untranslated re-

gion of mRNA encoded by C21orf97, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C21orf97 BINDING SITE, designated SEQ ID:5545, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36975] Another function of GAM1032 is therefore inhibition of Chromosome 21 open reading frame 97 (C21orf97, Accession NP_068760.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C21orf97.

[36976] Calcium/calmodulin-dependent protein kinase kinase 2, beta (CAMKK2, Accession NP_705720.1) is another GAM1032 target gene, herein designated TARGET GENE. CAMKK2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CAMKK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAMKK2 BINDING SITE, designated SEQ ID:7725, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:303.

[36977] Another function of GAM1032 is therefore inhibition of Calcium/calmodulin-dependent protein kinase kinase 2, beta (CAMKK2, Accession NP_705720.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAMKK2.

[36978] Calcium/calmodulin-dependent protein kinase kinase 2, beta (CAMKK2, Accession NP_757380.1) is another GAM1032 target gene, herein designated TARGET GENE. CAMKK2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CAMKK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAMKK2 BINDING SITE, designated SEQ ID:7725, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36979] Another function of GAM1032 is therefore inhibition of Calcium/calmodulin-dependent protein kinase kinase 2, beta (CAMKK2, Accession NP_757380.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with CAMKK2.

[36980] Calcium/calmodulin-dependent protein kinase kinase 2, beta (CAMKK2, Accession NP_705719.2) is another GAM1032 target gene, herein designated TARGET GENE. CAMKK2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CAMKK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAMKK2 BINDING SITE, designated SEQ ID:7725, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36981] Another function of GAM1032 is therefore inhibition of Calcium/calmodulin-dependent protein kinase kinase 2, beta (CAMKK2, Accession NP_705719.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAMKK2.

[36982] Calcium/calmodulin-dependent protein kinase kinase 2, beta (CAMKK2, Accession NP_757365.1) is another GAM1032 target gene, herein designated TARGET GENE.

CAMKK2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CAMKK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAMKK2 BINDING SITE, designated SEQ ID:7725, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36983] Another function of GAM1032 is therefore inhibition of Calcium/calmodulin-dependent protein kinase kinase 2, beta (CAMKK2, Accession NP_757365.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAMKK2.

[36984] Calcium/calmodulin-dependent protein kinase kinase 2, beta (CAMKK2, Accession NP_006540.3) is another GAM1032 target gene, herein designated TARGET GENE. CAMKK2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CAMKK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of

the nucleotide sequences of CAMKK2 BINDING SITE, designated SEQ ID:7725, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36985] Another function of GAM1032 is therefore inhibition of Calcium/calmodulin-dependent protein kinase kinase 2, beta (CAMKK2, Accession NP_006540.3) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAMKK2.

[36986] Caspase 4, apoptosis-related cysteine protease (CASP4, Accession NP_001216.1) is another GAM1032 target gene, herein designated TARGET GENE. CASP4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP4 BINDING SITE, designated SEQ ID:3772, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36987] Another function of GAM1032 is therefore inhibition of Caspase 4, apoptosis-related cysteine protease (CASP4,

Accession NP_001216.1), a gene which is an apoptosis-related caspase and involves in the activation cascade of caspases responsible for apoptosis execution. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CASP4.

[36988] The function of CASP4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM810.2.Caspase 4, apoptosis-related cysteine protease (CASP4, Accession NP_150650.1) is another GAM1032 target gene, herein designated TARGET GENE. CASP4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP4 BINDING SITE, designated SEQ ID:3772, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36989] Another function of GAM1032 is therefore inhibition of Caspase 4, apoptosis-related cysteine protease (CASP4,

Accession NP_150650.1), a gene which is an apoptosis-related caspase and involves in the activation cascade of caspases responsible for apoptosis execution. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CASP4.

[36990] The function of CASP4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM810.2.Caspase 4, apoptosis-related cysteine protease (CASP4, Accession NP_150649.1) is another GAM1032 target gene, herein designated TARGET GENE. CASP4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP4 BINDING SITE, designated SEQ ID:3772, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36991] Another function of GAM1032 is therefore inhibition of Caspase 4, apoptosis-related cysteine protease (CASP4,

Accession NP_150649.1), a gene which is an apoptosis-related caspase and involves in the activation cascade of caspases responsible for apoptosis execution. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CASP4.

[36992] The function of CASP4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM810.2.Cd1d antigen, d polypeptide (CD1D, Accession NP_001757.1) is another GAM1032 target gene, herein designated TARGET GENE. CD1D BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CD1D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CD1D BINDING SITE, designated SEQ ID:16191, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36993] Another function of GAM1032 is therefore inhibition of Cd1d antigen, d polypeptide (CD1D, Accession NP_001757.1), a gene which is a member D of the CD1

family; involved in antigen presentation . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CD1D.

[36994] The function of CD1D and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM550.1.Cell division cycle 25b (CDC25B, Accession NP_068658.1) is another GAM1032 target gene, herein designated TARGET GENE. CDC25B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CDC25B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDC25B BINDING SITE, designated SEQ ID:11047, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36995] Another function of GAM1032 is therefore inhibition of Cell division cycle 25b (CDC25B, Accession NP_068658.1), a gene which is positively activated by dephosphorylation. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions

associated with CDC25B.

[36996] The function of CDC25B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM504.2.Cell division cycle 25b (CDC25B, Accession NP_068660.1) is another GAM1032 target gene, herein designated TARGET GENE. CDC25B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CDC25B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDC25B BINDING SITE, designated SEQ ID:11047, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36997] Another function of GAM1032 is therefore inhibition of Cell division cycle 25b (CDC25B, Accession NP_068660.1), a gene which is positively activated by dephosphorylation. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDC25B.

[36998] The function of CDC25B and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM504.2.Cell division cycle 25b (CDC25B, Accession NP_004349.1) is another GAM1032 target gene, herein designated TARGET GENE. CDC25B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CDC25B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDC25B BINDING SITE, designated SEQ ID:11047, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[36999] Another function of GAM1032 is therefore inhibition of Cell division cycle 25b (CDC25B, Accession NP_004349.1), a gene which is positively activated by dephosphorylation. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDC25B.

[37000] The function of CDC25B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM504.2.Cell division cycle 25b (CDC25B, Accession NP_068659.1) is another GAM1032 target gene, herein

designated TARGET GENE. CDC25B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CDC25B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDC25B BINDING SITE, designated SEQ ID:11047, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37001] Another function of GAM1032 is therefore inhibition of Cell division cycle 25b (CDC25B, Accession NP_068659.1), a gene which is positively activated by dephosphorylation. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDC25B.

[37002] The function of CDC25B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM504.2.Cofilin 2 (muscle) (CFL2, Accession NP_068733.1) is another GAM1032 target gene, herein designated TARGET GENE. CFL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CFL2, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CFL2 BINDING SITE, designated SEQ ID:16082, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37003] Another function of GAM1032 is therefore inhibition of Cofilin 2 (muscle) (CFL2, Accession NP_068733.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CFL2.

[37004] Chloride channel 1, skeletal muscle (thomsen disease, autosomal dominant) (CLCN1, Accession NP_000074.1) is another GAM1032 target gene, herein designated TARGET GENE. CLCN1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CLCN1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLCN1 BINDING SITE, designated SEQ ID:7487, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37005] Another function of GAM1032 is therefore inhibition of Chloride channel 1, skeletal muscle (thomsen disease, autosomal dominant) (CLCN1, Accession NP_000074.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLCN1.

[37006] Ceroid-lipofuscinosis, neuronal 8 (epilepsy, progressive with mental retardation) (CLN8, Accession NP_061764.2) is another GAM1032 target gene, herein designated TARGET GENE. CLN8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CLN8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLN8 BINDING SITE, designated SEQ ID:17822, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37007] Another function of GAM1032 is therefore inhibition of Ceroid-lipofuscinosis, neuronal 8 (epilepsy, progressive with mental retardation) (CLN8, Accession NP_061764.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLN8.

[37008] CLONE24945 (Accession NP_056498.1) is another GAM1032 target gene, herein designated TARGET GENE. CLONE24945 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CLONE24945, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLONE24945 BINDING SITE, designated SEQ ID:7108, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37009] Another function of GAM1032 is therefore inhibition of CLONE24945 (Accession NP_056498.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLONE24945.

[37010] Citrate lyase beta like (CLYBL, Accession NP_612124.2) is another GAM1032 target gene, herein designated TARGET GENE. CLYBL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CLYBL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of CLYBL BINDING SITE, designated SEQ ID:6231, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37011] Another function of GAM1032 is therefore inhibition of Citrate lyase beta like (CLYBL, Accession NP_612124.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLYBL.

[37012] Collagen, type xix, alpha 1 (COL19A1, Accession NP_001849.1) is another GAM1032 target gene, herein designated TARGET GENE. COL19A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by COL19A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COL19A1 BINDING SITE, designated SEQ ID:3270, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37013] Another function of GAM1032 is therefore inhibition of Collagen, type xix, alpha 1 (COL19A1, Accession NP_001849.1), a gene which may act as a cross- bridge between fibrils and other extracellular matrix molecules.

Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COL19A1.

[37014] The function of COL19A1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM94.1.Collagen, type iv, alpha 6 (COL4A6, Accession NP_378667.1) is another GAM1032 target gene, herein designated TARGET GENE. COL4A6 BINDING SITE1 and COL4A6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by COL4A6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COL4A6 BINDING SITE1 and COL4A6 BINDING SITE2, designated SEQ ID:13214 and SEQ ID:15255 respectively, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37015] Another function of GAM1032 is therefore inhibition of Collagen, type iv, alpha 6 (COL4A6, Accession NP_378667.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with COL4A6.

[37016] CXYorf1 (Accession XP_088704.2) is another GAM1032 target gene, herein designated TARGET GENE. CXYorf1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CXYorf1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CXYorf1 BINDING SITE, designated SEQ ID:8588, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37017] Another function of GAM1032 is therefore inhibition of CXYorf1 (Accession XP_088704.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CXYorf1.

[37018] CYB5-M (Accession NP_085056.1) is another GAM1032 target gene, herein designated TARGET GENE. CYB5-M BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CYB5-M, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

CYB5-M BINDING SITE, designated SEQ ID:17320, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37019] Another function of GAM1032 is therefore inhibition of CYB5-M (Accession NP_085056.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYB5-M.

[37020] DEPP (Accession NP_008952.1) is another GAM1032 target gene, herein designated TARGET GENE. DEPP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DEPP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DEPP BINDING SITE, designated SEQ ID:10673, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37021] Another function of GAM1032 is therefore inhibition of DEPP (Accession NP_008952.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DEPP.

[37022] DIS3 (Accession NP_055768.2) is another GAM1032 target

gene, herein designated TARGET GENE. DIS3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DIS3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DIS3 BINDING SITE, designated SEQ ID:16408, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37023] Another function of GAM1032 is therefore inhibition of DIS3 (Accession NP_055768.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DIS3.

[37024] DISPB (Accession NP_277045.1) is another GAM1032 target gene, herein designated TARGET GENE. DISPB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DISPB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DISPB BINDING SITE, designated SEQ ID:17823, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37025] Another function of GAM1032 is therefore inhibition of DISPB (Accession NP_277045.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DISPB.

[37026] dJ383J4.3 (Accession XP_294938.1) is another GAM1032 target gene, herein designated TARGET GENE. dJ383J4.3 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by dJ383J4.3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of dJ383J4.3 BINDING SITE, designated SEQ ID:9430, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37027] Another function of GAM1032 is therefore inhibition of dJ383J4.3 (Accession XP_294938.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with dJ383J4.3.

[37028] DKFZP434C171 (Accession NP_056436.1) is another GAM1032 target gene, herein designated TARGET GENE. DKFZP434C171 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by

DKFZP434C171, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434C171 BINDING SITE, designated SEQ ID:3164, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37029] Another function of GAM1032 is therefore inhibition of DKFZP434C171 (Accession NP_056436.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434C171.

[37030] DKFZp434O0320 (Accession XP_097012.2) is another GAM1032 target gene, herein designated TARGET GENE. DKFZp434O0320 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp434O0320, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434O0320 BINDING SITE, designated SEQ ID:12853, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37031] Another function of GAM1032 is therefore inhibition of DKFZp434O0320 (Accession XP_097012.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434O0320.

[37032] DKFZp547B1713 (Accession NP_689592.1) is another GAM1032 target gene, herein designated TARGET GENE. DKFZp547B1713 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp547B1713, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp547B1713 BINDING SITE, designated SEQ ID:8359, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37033] Another function of GAM1032 is therefore inhibition of DKFZp547B1713 (Accession NP_689592.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp547B1713.

[37034] DKFZP566I1024 (Accession NP_056226.1) is another GAM1032 target gene, herein designated TARGET GENE.

DKFZP566I1024 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP566I1024, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP566I1024 BINDING SITE, designated SEQ ID:7803, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37035] Another function of GAM1032 is therefore inhibition of DKFZP566I1024 (Accession NP_056226.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP566I1024.

[37036] DKFZp586F1019 (Accession NP_112159.1) is another GAM1032 target gene, herein designated TARGET GENE. DKFZp586F1019 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp586F1019, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp586F1019 BINDING SITE, designated SEQ ID:5132, to the nucleotide sequence of

GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37037] Another function of GAM1032 is therefore inhibition of DKFZp586F1019 (Accession NP_112159.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp586F1019.

[37038] DKFZp686G052 (Accession XP_300559.1) is another GAM1032 target gene, herein designated TARGET GENE. DKFZp686G052 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp686G052, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp686G052 BINDING SITE, designated SEQ ID:11872, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37039] Another function of GAM1032 is therefore inhibition of DKFZp686G052 (Accession XP_300559.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp686G052.

[37040] Doublesex and mab-3 related transcription factor 2 (DMRT2, Accession NP_006548.1) is another GAM1032 target gene, herein designated TARGET GENE. DMRT2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DMRT2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DMRT2 BINDING SITE, designated SEQ ID:5107, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37041] Another function of GAM1032 is therefore inhibition of Doublesex and mab-3 related transcription factor 2 (DMRT2, Accession NP_006548.1), a gene which May be involved in male sexual development. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DMRT2.

[37042] The function of DMRT2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM439.1.Dmrt-like family c2 (DMRTC2, Accession NP_149041.1) is another GAM1032 target gene, herein designated TARGET GENE. DMRTC2 BINDING SITE is a tar-

get binding site found in the 3` untranslated region of mRNA encoded by DMRTC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DMRTC2 BINDING SITE, designated SEQ ID:9542, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37043] Another function of GAM1032 is therefore inhibition of Dmrt-like family c2 (DMRTC2, Accession NP_149041.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DMRTC2.

[37044] Dynamin 2 (DNM2, Accession NP_004936.1) is another GAM1032 target gene, herein designated TARGET GENE. DNM2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DNM2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DNM2 BINDING SITE, designated SEQ ID:19535, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37045] Another function of GAM1032 is therefore inhibition of Dynamin 2 (DNM2, Accession NP_004936.1), a gene which regulates budding of endocytic vesicles . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNM2.

[37046] The function of DNM2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM223.1.Deltex homolog 2 (drosophila) (DTX2, Accession NP_065943.1) is another GAM1032 target gene, herein designated TARGET GENE. DTX2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DTX2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DTX2 BINDING SITE, designated SEQ ID:19806, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37047] Another function of GAM1032 is therefore inhibition of Deltex homolog 2 (drosophila) (DTX2, Accession NP_065943.1) . Accordingly, utilities of GAM1032 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with DTX2.

[37048] E2f transcription factor 3 (E2F3, Accession NP_001940.1) is another GAM1032 target gene, herein designated TARGET GENE. E2F3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by E2F3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of E2F3 BINDING SITE, designated SEQ ID:16241, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37049] Another function of GAM1032 is therefore inhibition of E2f transcription factor 3 (E2F3, Accession NP_001940.1), a gene which binds dna and controls cell- cycle progression from g1 to s phase. and therefore may be associated with Hereditary autosomal dominant myoclonus dystonia. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of Hereditary autosomal dominant myoclonus dystonia, and of other diseases and clinical conditions associated with E2F3.

[37050] The function of E2F3 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM44.1.EDRF1 (Accession NP_056423.2) is another GAM1032 target gene, herein designated TARGET GENE. EDRF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EDRF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EDRF1 BINDING SITE, designated SEQ ID:5132, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37051] Another function of GAM1032 is therefore inhibition of EDRF1 (Accession NP_056423.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EDRF1.

[37052] Estrogen receptor 1 (ESR1, Accession NP_000116.1) is another GAM1032 target gene, herein designated TARGET GENE. ESR1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ESR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ESR1 BINDING SITE, designated SEQ ID:11698,

to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37053] Another function of GAM1032 is therefore inhibition of Estrogen receptor 1 (ESR1, Accession NP_000116.1), a gene which involved in hormone- mediated inhibition of gene expression. and therefore may be associated with Estrogen receptor mutant. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of Estrogen receptor mutant, and of other diseases and clinical conditions associated with ESR1.

[37054] The function of ESR1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM289.1.F-box only protein 10 (FBXO10, Accession XP_291314.1) is another GAM1032 target gene, herein designated TARGET GENE. FBXO10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FBXO10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXO10 BINDING SITE, designated SEQ ID:1583, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also des-

ignated SEQ ID:303.

[37055] Another function of GAM1032 is therefore inhibition of F-box only protein 10 (FBXO10, Accession XP_291314.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FBXO10.

[37056] FLJ10496 (Accession NP_060584.2) is another GAM1032 target gene, herein designated TARGET GENE. FLJ10496 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10496, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10496 BINDING SITE, designated SEQ ID:6405, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37057] Another function of GAM1032 is therefore inhibition of FLJ10496 (Accession NP_060584.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10496.

[37058] FLJ10648 (Accession NP_060637.1) is another GAM1032 target gene, herein designated TARGET GENE. FLJ10648

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10648, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10648 BINDING SITE, designated SEQ ID:13957, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37059] Another function of GAM1032 is therefore inhibition of FLJ10648 (Accession NP_060637.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10648.

[37060] FLJ10932 (Accession NP_060747.1) is another GAM1032 target gene, herein designated TARGET GENE. FLJ10932 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10932, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10932 BINDING SITE, designated SEQ ID:2710, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37061] Another function of GAM1032 is therefore inhibition of FLJ10932 (Accession NP_060747.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10932.

[37062] FLJ11506 (Accession NP_078942.2) is another GAM1032 target gene, herein designated TARGET GENE. FLJ11506 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11506, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11506 BINDING SITE, designated SEQ ID:1155, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37063] Another function of GAM1032 is therefore inhibition of FLJ11506 (Accession NP_078942.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11506.

[37064] FLJ12439 (Accession NP_075565.1) is another GAM1032 target gene, herein designated TARGET GENE. FLJ12439 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by FLJ12439, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12439 BINDING SITE, designated SEQ ID:14060, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37065] Another function of GAM1032 is therefore inhibition of FLJ12439 (Accession NP_075565.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12439.

[37066] FLJ13204 (Accession NP_079037.2) is another GAM1032 target gene, herein designated TARGET GENE. FLJ13204 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13204, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13204 BINDING SITE, designated SEQ ID:4441, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37067] Another function of GAM1032 is therefore inhibition of

FLJ13204 (Accession NP_079037.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13204.

[37068] FLJ13769 (Accession NP_079288.1) is another GAM1032 target gene, herein designated TARGET GENE. FLJ13769 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13769, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13769 BINDING SITE, designated SEQ ID:2505, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37069] Another function of GAM1032 is therefore inhibition of FLJ13769 (Accession NP_079288.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13769.

[37070] FLJ14154 (Accession NP_079121.1) is another GAM1032 target gene, herein designated TARGET GENE. FLJ14154 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14154, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14154 BINDING SITE, designated SEQ ID:5645, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37071] Another function of GAM1032 is therefore inhibition of FLJ14154 (Accession NP_079121.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14154.

[37072] FLJ14166 (Accession NP_078841.1) is another GAM1032 target gene, herein designated TARGET GENE. FLJ14166 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ14166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14166 BINDING SITE, designated SEQ ID:2917, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37073] Another function of GAM1032 is therefore inhibition of FLJ14166 (Accession NP_078841.1) . Accordingly, utilities

of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14166.

[37074] FLJ20014 (Accession NP_060092.1) is another GAM1032 target gene, herein designated TARGET GENE. FLJ20014 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ20014, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20014 BINDING SITE, designated SEQ ID:2766, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37075] Another function of GAM1032 is therefore inhibition of FLJ20014 (Accession NP_060092.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20014.

[37076] FLJ20401 (Accession NP_060275.1) is another GAM1032 target gene, herein designated TARGET GENE. FLJ20401 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ20401, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20401 BINDING SITE, designated SEQ ID:4190, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37077] Another function of GAM1032 is therefore inhibition of FLJ20401 (Accession NP_060275.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20401.

[37078] FLJ20445 (Accession NP_060294.1) is another GAM1032 target gene, herein designated TARGET GENE. FLJ20445 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20445, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20445 BINDING SITE, designated SEQ ID:12035, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37079] Another function of GAM1032 is therefore inhibition of FLJ20445 (Accession NP_060294.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ20445.

[37080] FLJ20584 (Accession NP_060361.1) is another GAM1032 target gene, herein designated TARGET GENE. FLJ20584 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20584, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20584 BINDING SITE, designated SEQ ID:8842, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37081] Another function of GAM1032 is therefore inhibition of FLJ20584 (Accession NP_060361.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20584.

[37082] FLJ21148 (Accession NP_079136.1) is another GAM1032 target gene, herein designated TARGET GENE. FLJ21148 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ21148, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ21148 BINDING SITE, designated SEQ ID:11110, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37083] Another function of GAM1032 is therefore inhibition of FLJ21148 (Accession NP_079136.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21148.

[37084] FLJ21240 (Accession NP_079123.1) is another GAM1032 target gene, herein designated TARGET GENE. FLJ21240 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ21240, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21240 BINDING SITE, designated SEQ ID:6131, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37085] Another function of GAM1032 is therefore inhibition of FLJ21240 (Accession NP_079123.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ21240.

[37086] FLJ21802 (Accession NP_078920.1) is another GAM1032 target gene, herein designated TARGET GENE. FLJ21802 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ21802, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21802 BINDING SITE, designated SEQ ID:7802, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37087] Another function of GAM1032 is therefore inhibition of FLJ21802 (Accession NP_078920.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21802.

[37088] FLJ22639 (Accession NP_079072.1) is another GAM1032 target gene, herein designated TARGET GENE. FLJ22639 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ22639, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ22639 BINDING SITE, designated SEQ ID:2390, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37089] Another function of GAM1032 is therefore inhibition of FLJ22639 (Accession NP_079072.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22639.

[37090] FLJ25954 (Accession NP_775843.1) is another GAM1032 target gene, herein designated TARGET GENE. FLJ25954 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ25954, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ25954 BINDING SITE, designated SEQ ID:3762, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37091] Another function of GAM1032 is therefore inhibition of FLJ25954 (Accession NP_775843.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ25954.

[37092] FLJ30567 (Accession NP_659459.1) is another GAM1032 target gene, herein designated TARGET GENE. FLJ30567 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ30567, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30567 BINDING SITE, designated SEQ ID:12412, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37093] Another function of GAM1032 is therefore inhibition of FLJ30567 (Accession NP_659459.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30567.

[37094] FLJ30655 (Accession NP_653244.1) is another GAM1032 target gene, herein designated TARGET GENE. FLJ30655 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ30655, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30655 BINDING SITE, designated SEQ ID:1102, to the

nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37095] Another function of GAM1032 is therefore inhibition of FLJ30655 (Accession NP_653244.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30655.

[37096] FLJ32112 (Accession NP_694580.1) is another GAM1032 target gene, herein designated TARGET GENE. FLJ32112 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32112, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32112 BINDING SITE, designated SEQ ID:13700, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37097] Another function of GAM1032 is therefore inhibition of FLJ32112 (Accession NP_694580.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32112.

[37098] FLJ35721 (Accession NP_775955.1) is another GAM1032

target gene, herein designated TARGET GENE. FLJ35721 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ35721, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35721 BINDING SITE, designated SEQ ID:9904, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37099] Another function of GAM1032 is therefore inhibition of FLJ35721 (Accession NP_775955.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ35721.

[37100] FLJ39249 (Accession NP_775935.1) is another GAM1032 target gene, herein designated TARGET GENE. FLJ39249 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ39249, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39249 BINDING SITE, designated SEQ ID:6728, to the nucleotide sequence of GAM1032 RNA, herein designated

GAM RNA, also designated SEQ ID:303.

[37101] Another function of GAM1032 is therefore inhibition of FLJ39249 (Accession NP_775935.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39249.

[37102] FLJ39639 (Accession XP_290687.1) is another GAM1032 target gene, herein designated TARGET GENE. FLJ39639 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ39639, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39639 BINDING SITE, designated SEQ ID:8387, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37103] Another function of GAM1032 is therefore inhibition of FLJ39639 (Accession XP_290687.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39639.

[37104] FLJ90013 (Accession NP_699196.1) is another GAM1032 target gene, herein designated TARGET GENE. FLJ90013

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ90013, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ90013 BINDING SITE, designated SEQ ID:4414, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37105] Another function of GAM1032 is therefore inhibition of FLJ90013 (Accession NP_699196.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ90013.

[37106] GAF1 (Accession NP_056285.1) is another GAM1032 target gene, herein designated TARGET GENE. GAF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GAF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GAF1 BINDING SITE, designated SEQ ID:6004, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37107] Another function of GAM1032 is therefore inhibition of GAF1 (Accession NP_056285.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GAF1.

[37108] Golgi associated, gamma adaptin ear containing, arf binding protein 2 (GGA2, Accession NP_055859.1) is another GAM1032 target gene, herein designated TARGET GENE. GGA2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GGA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GGA2 BINDING SITE, designated SEQ ID:3682, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37109] Another function of GAM1032 is therefore inhibition of Golgi associated, gamma adaptin ear containing, arf binding protein 2 (GGA2, Accession NP_055859.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GGA2.

[37110] Golgi associated, gamma adaptin ear containing, arf bind-

ing protein 2 (GGA2, Accession NP_619581.1) is another GAM1032 target gene, herein designated TARGET GENE. GGA2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GGA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GGA2 BINDING SITE, designated SEQ ID:3682, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37111] Another function of GAM1032 is therefore inhibition of Golgi associated, gamma adaptin ear containing, arf binding protein 2 (GGA2, Accession NP_619581.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GGA2.

[37112] Glucocorticoid induced transcript 1 (GLCCI1, Accession XP_166529.2) is another GAM1032 target gene, herein designated TARGET GENE. GLCCI1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLCCI1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING

SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GLCCI1 BINDING SITE, designated SEQ ID:15598, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37113] Another function of GAM1032 is therefore inhibition of Glucocorticoid induced transcript 1 (GLCCI1, Accession XP_166529.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GLCCI1.

[37114] Glucocorticoid modulatory element binding protein 2 (GMEB2, Accession NP_036516.1) is another GAM1032 target gene, herein designated TARGET GENE. GMEB2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GMEB2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GMEB2 BINDING SITE, designated SEQ ID:1427, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37115] Another function of GAM1032 is therefore inhibition of Glucocorticoid modulatory element binding protein 2

(GMEB2, Accession NP_036516.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GMEB2.

[37116] Guanine nucleotide binding protein (g protein), alpha 11 (gq class) (GNA11, Accession NP_002058.1) is another GAM1032 target gene, herein designated TARGET GENE. GNA11 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GNA11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GNA11 BINDING SITE, designated SEQ ID:10253, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37117] Another function of GAM1032 is therefore inhibition of Guanine nucleotide binding protein (g protein), alpha 11 (gq class) (GNA11, Accession NP_002058.1), a gene which acts as an activator of phospholipase c. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNA11.

[37118] The function of GNA11 has been established by previous studies. Strathmann and Simon (1991) described the

Gna11 gene in the mouse. The human gene was cloned by Jiang et al. (1991) and found to be 359 amino acids long. Mouse Gna11 and Gna15 (OMIM Ref. No. 139314) are tandemly duplicated in a head- to- tail array. Davignon et al. (1996) showed that the upstream gene, Gna11, is ubiquitously expressed, whereas expression of the downstream gene, Gna15, is restricted to hematopoietic cells. There was no evidence for alternative splicing within the coding sequence of either gene.

[37119] Animal model experiments lend further support to the function of GNA11. Using gene targeting, Offermanns et al. (1998) generated Gna11- deficient mice that were viable and fertile with no apparent behavioral or morphologic defects. They bred Gnaq (OMIM Ref. No. 600998)-deficient mice with Gna11- deficient mice and observed gene dosage effects between Gnaq and Gna11. Embryos completely lacking both genes died in utero with heart malformations. Mice inheriting a single copy of either gene died within hours of birth with craniofacial and/or cardiac defects. Offermanns et al. (1998) concluded that at least 2 active alleles of these genes are required for extrauterine life. Genetic, morphologic, and pharmacologic analyses of intercross offspring inheriting different com-

binations of these 2 mutations indicated that Gnaq and Gna11 have overlapping functions in embryonic cardiomyocyte proliferation and craniofacial development.

[37120] It is appreciated that the abovementioned animal model for GNA11 is acknowledged by those skilled in the art as a scientifically valid animal model, as can be further appreciated from the publications sited hereinbelow.

[37121] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[37122] Offermanns, S.; Zhao, L.- P.; Gohla, A.; Sarosi, I.; Simon, M. I.; Wilkie, T. M. : Embryonic cardiomyocyte hypoplasia and craniofacial defects in G- alpha- q/G- alpha- 11- mutant mice. EMBO J. 17: 4304- 4312, 1998. ; and

[37123] Strathmann, M. P.; Simon, M. I. : G- alpha- 12 and G- alpha- 13 subunits define a fourth class of G protein alpha subunits. Proc. Nat. Acad. Sci. 88: 5582- 5586, 1991.

[37124] Further studies establishing the function and utilities of GNA11 are found in John Hopkins OMIM database record ID 139313, and in cited publications listed in Table 5, which are hereby incorporated by reference.Guanine nucleotide binding protein (g protein), alpha transducing activity polypeptide 1 (GNAT1, Accession NP_000163.2) is

another GAM1032 target gene, herein designated TARGET GENE. GNAT1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GNAT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GNAT1 BINDING SITE, designated SEQ ID:13082, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37125] Another function of GAM1032 is therefore inhibition of Guanine nucleotide binding protein (g protein), alpha transducing activity polypeptide 1 (GNAT1, Accession NP_000163.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNAT1.

[37126] Guanine nucleotide binding protein (g protein), alpha transducing activity polypeptide 1 (GNAT1, Accession NP_653082.1) is another GAM1032 target gene, herein designated TARGET GENE. GNAT1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GNAT1, corresponding to a target binding site such as BINDING SITE I, BIND-

ING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GNAT1 BINDING SITE, designated SEQ ID:13082, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37127] Another function of GAM1032 is therefore inhibition of Guanine nucleotide binding protein (g protein), alpha transducing activity polypeptide 1 (GNAT1, Accession NP_653082.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNAT1.

[37128] Guanylate cyclase 2c (heat stable enterotoxin receptor) (GUCY2C, Accession NP_004954.1) is another GAM1032 target gene, herein designated TARGET GENE. GUCY2C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GUCY2C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GUCY2C BINDING SITE, designated SEQ ID:9622, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37129] Another function of GAM1032 is therefore inhibition of

Guanylate cyclase 2c (heat stable enterotoxin receptor) (GUCY2C, Accession NP_004954.1), a gene which is a receptor for the e.coli heat- stable enterotoxin and guanylate cyclase activated by the endogenous peptide guanylin. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GUCY2C.

[37130] The function of GUCY2C has been established by previous studies. Mann et al. (1996) described guanylyl cyclase C (called GC- C by them) as a transmembrane receptor expressed primarily in the intestine that regulates chloride secretion via the cystic fibrosis transmembrane conductance regulator (OMIM Ref. No. 602421). Binding of GC- C to either the endogenous peptide guanylin (OMIM Ref. No. 139392) or the bacterially derived heat- stable enterotoxin STa, results in increased levels of cGMP and the stimulation of water and chloride secretion. In the case of exposure to STa, this leads to debilitating secretory diarrhea. From a human colonic cell line, Singh et al. (1991) isolated a cDNA whose predicted amino acid sequence is 81% homologous to the GC- C intestinal enterotoxin STa receptor in rat. After transient transfection of COS- 7 cells with the human cDNA, the investigators observed a con-

centration- dependent response to STa in transfected cells as measured by intracellular cGMP accumulation. They referred to this human STa receptor as STaR. Similarly, de Sauvage et al. (1991) identified a human cDNA encoding an STa receptor. The receptor has an extracellular ligand-binding domain and a cytoplasmic guanylyl cyclase domain, as do members of the natriuretic peptide receptor family. They showed that stable mammalian cell lines overexpressing the STa receptor bind radioiodinated STa (with a K(d) in the nanomolar range) and exhibit a ligand-induced increase in the cellular cGMP level

[37131]

[37135] Further studies establishing the function and utilities of GUCY2C are found in John Hopkins OMIM database record ID 601330, and in cited publications listed in Table 5, which are hereby incorporated by reference.H63 (Accession NP_816929.1) is another GAM1032 target gene, herein designated TARGET GENE. H63 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by H63, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of H63 BINDING SITE, designated SEQ ID:3048, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37136] Another function of GAM1032 is therefore inhibition of H63 (Accession NP_816929.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with H63.

[37137] H63 (Accession NP_612432.2) is another GAM1032 target gene, herein designated TARGET GENE. H63 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by H63,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of H63 BINDING SITE, designated SEQ ID:3048, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37138] Another function of GAM1032 is therefore inhibition of H63 (Accession NP_612432.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with H63.

[37139] Hyaluronan synthase 1 (HAS1, Accession NP_001514.1) is another GAM1032 target gene, herein designated TARGET GENE. HAS1 BINDING SITE1 and HAS1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HAS1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HAS1 BINDING SITE1 and HAS1 BINDING SITE2, designated SEQ ID:16698 and SEQ ID:3709 respectively, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37140] Another function of GAM1032 is therefore inhibition of

Hyaluronan synthase 1 (HAS1, Accession NP_001514.1), a gene which plays a role in hyaluronan/hyaluronic acid (ha) synthesis. also able to catalyze the synthesis of chito-oligosaccharide depending on the substrate. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HAS1.

[37141] The function of HAS1 has been established by previous studies. Hyaluronan or hyaluronic acid (HA) is a high molecular weight unbranched polysaccharide, synthesized by a wide variety of organisms from bacteria to mammals, and found in the extracellular matrix. It consists of alter-nating glucuronic acid and N- acetylglucosamine residues that are linked by beta- 1- 3 and beta- 1- 4 glycosidic bonds. Watanabe and Yamaguchi (1996) noted that unlike other glycosaminoglycans, HA synthesis occurs at the in-ner surface of the plasma membrane and the chains are extruded through pore- like structures into the extracel-lular space. Hyaluronan serves a variety of functions, in-cluding space filling, lubrication of joints, and provision of a matrix through which cells can migrate. The interaction of HA with the leukocyte receptor CD44 (OMIM Ref. No. 107269) is important in tissue- specific homing by leuko-

cytes and overexpression of HA receptors has been correlated with tumor metastasis (Hall et al., 1995). Itano and Kimata (1996) used a transient expression system in a mouse mammary carcinoma cell line that lacks HA expression to isolate cDNA clones capable of restoring HA synthesis activity. The mouse cDNA sequence identified predicted a 583- amino acid protein with similarity to the Xenopus DG42 protein and a bacterial HA synthase.

[37142]

[37143] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[37144] Watanabe, K.; Yamaguchi, Y. : Molecular identification of a putative human hyaluronan synthase. J. Biol. Chem. 271: 22945- 22948, 1996. ; and

[37145] Itano, N.; Kimata, K. : Expression cloning and molecular characterization of HAS protein, a eukaryotic hyaluronan synthase. J. Biol. Chem. 271: 9875- 9878, 1996.

[37146] Further studies establishing the function and utilities of HAS1 are found in John Hopkins OMIM database record ID 601463, and in cited publications listed in Table 5, which are hereby incorporated by reference.HCNGP (Accession NP_037392.1) is another GAM1032 target gene, herein

designated TARGET GENE. HCNGP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HCNGP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HCNGP BINDING SITE, designated SEQ ID:18142, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37147] Another function of GAM1032 is therefore inhibition of HCNGP (Accession NP_037392.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HCNGP.

[37148] HES2 (Accession XP_290879.1) is another GAM1032 target gene, herein designated TARGET GENE. HES2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HES2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HES2 BINDING SITE, designated SEQ ID:16768, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37149] Another function of GAM1032 is therefore inhibition of HES2 (Accession XP_290879.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HES2.

[37150] Human immunodeficiency virus type i enhancer binding protein 1 (HIVEP1, Accession NP_002105.1) is another GAM1032 target gene, herein designated TARGET GENE. HIVEP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HIVEP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HIVEP1 BINDING SITE, designated SEQ ID:6005, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37151] Another function of GAM1032 is therefore inhibition of Human immunodeficiency virus type i enhancer binding protein 1 (HIVEP1, Accession NP_002105.1), a gene which specifically binds to the dna sequence 5'- gggactttcc- 3' which is found in the enhancer elements of numerous viral promoters such as those of sv40, cmv, or hiv1. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions as-

sociated with HIVEP1.

[37152] The function of HIVEP1 has been established by previous studies. The sequence GGGACTTTCC is found in the enhancer elements of numerous viral promoters, including those of simian virus 40 (SV40), cytomegalovirus (CMV), and the human immunodeficiency virus (HIV). In addition, related sequences are found in the enhancer elements of a number of cellular promoters, including those of the class I major histocompatibility gene complex (OMIM Ref. No. 142800), the kappa immunoglobulin gene (OMIM Ref. No. 147200), the interleukin- 2 receptor gene (OMIM Ref. No. 147730), and the interferon- beta gene (OMIM Ref. No. 147640). Mutagenesis of these enhancer elements has indicated their role in the transcriptional regulation of both viral and cellular genes. Zinc finger protein- 40, a protein that binds to these sequences, has a molecular mass of 298 kD and contains 2 widely separated zinc finger binding domains, each of which binds to the same DNA sequence. This protein has variously been known as HIVEP1 (human immunodeficiency virus type 1 enhancer-binding protein- 1), MBP- 1 (major histocompatibility complex- binding protein- 1), and PRDII- BF1 (positive regulatory domain II- binding factor 1). (See HIVEP2,

143054.) By Southern analysis of a panel of mouse/human somatic cell hybrid DNAs and by in situ hybridization, Gaynor et al. (1991) mapped the HIVEP1 gene to 6p24-p22.3. In the course of fine mapping of 39 ESTs on 6p24-p23, Olavesen et al. (1997) confirmed the assignment of ZNF40 to this region.

[37153]

[37154] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[37155] Gaynor, R. B.; Muchardt, C.; Diep, A.; Mohandas, T. K.; Sparkes, R. S.; Lusis, A. J. : Localization of the zinc finger DNA- binding protein HIV- EP1/MBP- 1/PRDII- BF1 to human chromosome 6p22.3- p24. Genomics 9: 758- 761, 1991. ; and

[37156] Olavesen, M. G.; Bentley, E.; Mason, R. V. F.; Stephens, R. J.; Ragoussis, J. : Fine mapping of 39 ESTs on human chromosome 6p23- p25. Genomics 46: 303- 306, 1997.

[37157] Further studies establishing the function and utilities of HIVEP1 are found in John Hopkins OMIM database record ID 194540, and in cited publications listed in Table 5, which are hereby incorporated by reference.Holocarboxylase synthetase

(biotin-[proprionyl-coenzyme a-carboxylase (atp-hydrolysing)] ligase) (HLCS, Accession NP_000402.2) is another GAM1032 target gene, herein designated TARGET GENE. HLCS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HLCS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HLCS BINDING SITE, designated SEQ ID:4592, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37158] Another function of GAM1032 is therefore inhibition of Holocarboxylase synthetase (biotin-[proprionyl-coenzyme a-carboxylase (atp-hydrolysing)] ligase) (HLCS, Accession NP_000402.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HLCS.

[37159] Heat shock 90kda protein 1, alpha-like 3 (HSPCAL3, Accession XP_084514.3) is another GAM1032 target gene, herein designated TARGET GENE. HSPCAL3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HSPCAL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II

or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSPCAL3 BINDING SITE, designated SEQ ID:1703, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37160] Another function of GAM1032 is therefore inhibition of Heat shock 90kda protein 1, alpha-like 3 (HSPCAL3, Accession XP_084514.3) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSPCAL3.

[37161] Interleukin 18 receptor 1 (IL18R1, Accession NP_003846.1) is another GAM1032 target gene, herein designated TARGET GENE. IL18R1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL18R1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL18R1 BINDING SITE, designated SEQ ID:17153, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37162] Another function of GAM1032 is therefore inhibition of Interleukin 18 receptor 1 (IL18R1, Accession

NP_003846.1), a gene which is required for dorsal- ventral embryonic polarity and promotes heterophilic cellular adhesion. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL18R1.

[37163] The function of IL18R1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM190.1.Internexin neuronal intermediate filament protein, alpha (INA, Accession NP_116116.1) is another GAM1032 target gene, herein designated TARGET GENE. INA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by INA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of INA BINDING SITE, designated SEQ ID:2428, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37164] Another function of GAM1032 is therefore inhibition of Internexin neuronal intermediate filament protein, alpha (INA, Accession NP_116116.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of

diseases and clinical conditions associated with INA.

[37165] Inositol polyphosphate-5-phosphatase, 145kda (INPP5D, Accession NP_005532.1) is another GAM1032 target gene, herein designated TARGET GENE. INPP5D BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by INPP5D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of INPP5D BINDING SITE, designated SEQ ID:8687, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37166] Another function of GAM1032 is therefore inhibition of Inositol polyphosphate-5-phosphatase, 145kda (INPP5D, Accession NP_005532.1), a gene which hydrolyzes Ins(1,3,4,5)P4 and PtdIns(3,4,5)P3; contains an SH2- domain and therefore may be associated with Severe osteoporosis. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of Severe osteoporosis, and of other diseases and clinical conditions associated with INPP5D.

[37167] The function of INPP5D and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM347.1.Il2-inducible t-cell kinase (ITK, Accession NP_005537.3) is another GAM1032 target gene, herein designated TARGET GENE. ITK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ITK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ITK BINDING SITE, designated SEQ ID:978, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37168] Another function of GAM1032 is therefore inhibition of Il2-inducible t-cell kinase (ITK, Accession NP_005537.3), a gene which plays a role in t cell proliferation and differentiation. and therefore may be associated with Myelodysplastic syndrome. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of Myelodysplastic syndrome, and of other diseases and clinical conditions associated with ITK.

[37169] The function of ITK and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM44.1.Kv channel interacting protein 2 (KCNIP2, Ac-

cession NP_775464.1) is another GAM1032 target gene, herein designated TARGET GENE. KCNIP2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KCNIP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNIP2 BINDING SITE, designated SEQ ID:16093, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37170] Another function of GAM1032 is therefore inhibition of Kv channel interacting protein 2 (KCNIP2, Accession NP_775464.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNIP2.

[37171] KIAA0329 (Accession NP_055659.1) is another GAM1032 target gene, herein designated TARGET GENE. KIAA0329 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0329, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0329 BINDING SITE, designated SEQ ID:5874, to the

nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37172] Another function of GAM1032 is therefore inhibition of KIAA0329 (Accession NP_055659.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0329.

[37173] KIAA0377 (Accession NP_055474.1) is another GAM1032 target gene, herein designated TARGET GENE. KIAA0377 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0377, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0377 BINDING SITE, designated SEQ ID:17827, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37174] Another function of GAM1032 is therefore inhibition of KIAA0377 (Accession NP_055474.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0377.

[37175] KIAA0459 (Accession XP_027862.1) is another GAM1032

target gene, herein designated TARGET GENE. KIAA0459 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0459, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0459 BINDING SITE, designated SEQ ID:8436, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37176] Another function of GAM1032 is therefore inhibition of KIAA0459 (Accession XP_027862.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0459.

[37177] KIAA0694 (Accession XP_051970.2) is another GAM1032 target gene, herein designated TARGET GENE. KIAA0694 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA0694, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0694 BINDING SITE, designated SEQ ID:10714, to the nucleotide sequence of GAM1032 RNA, herein designated

GAM RNA, also designated SEQ ID:303.

[37178] Another function of GAM1032 is therefore inhibition of KIAA0694 (Accession XP_051970.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0694.

[37179] KIAA1271 (Accession XP_045472.1) is another GAM1032 target gene, herein designated TARGET GENE. KIAA1271 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1271, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1271 BINDING SITE, designated SEQ ID:12182, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37180] Another function of GAM1032 is therefore inhibition of KIAA1271 (Accession XP_045472.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1271.

[37181] KIAA1465 (Accession XP_027396.4) is another GAM1032 target gene, herein designated TARGET GENE. KIAA1465

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1465, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1465 BINDING SITE, designated SEQ ID:18401, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37182] Another function of GAM1032 is therefore inhibition of KIAA1465 (Accession XP_027396.4) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1465.

[37183] KIAA1718 (Accession XP_034823.5) is another GAM1032 target gene, herein designated TARGET GENE. KIAA1718 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1718, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1718 BINDING SITE, designated SEQ ID:8259, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37184] Another function of GAM1032 is therefore inhibition of KIAA1718 (Accession XP_034823.5) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1718.

[37185] KIAA1879 (Accession XP_056635.1) is another GAM1032 target gene, herein designated TARGET GENE. KIAA1879 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA1879, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1879 BINDING SITE, designated SEQ ID:16159, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37186] Another function of GAM1032 is therefore inhibition of KIAA1879 (Accession XP_056635.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1879.

[37187] KIF25 (Accession NP_085118.1) is another GAM1032 target gene, herein designated TARGET GENE. KIF25 BINDING SITE is a target binding site found in the 5` untranslated

region of multiple transcripts of mRNA encoded by KIF25, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIF25 BINDING SITE, designated SEQ ID:4138, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37188] Another function of GAM1032 is therefore inhibition of KIF25 (Accession NP_085118.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIF25.

[37189] KIF25 (Accession NP_005346.2) is another GAM1032 target gene, herein designated TARGET GENE. KIF25 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by KIF25, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIF25 BINDING SITE, designated SEQ ID:4138, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37190] Another function of GAM1032 is therefore inhibition of KIF25 (Accession NP_005346.2) . Accordingly, utilities of

GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIF25.

[37191] Killer cell immunoglobulin-like receptor, two domains, long cytoplasmic tail, 1 (KIR2DL1, Accession NP_055033.1) is another GAM1032 target gene, herein designated TARGET GENE. KIR2DL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIR2DL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIR2DL1 BINDING SITE, designated SEQ ID:7645, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37192] Another function of GAM1032 is therefore inhibition of Killer cell immunoglobulin-like receptor, two domains, long cytoplasmic tail, 1 (KIR2DL1, Accession NP_055033.1), a gene which inhibits the activity of nk cells thus preventing cell lysis. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIR2DL1.

[37193] The function of KIR2DL1 has been established by previous studies. The existence of human inhibitory natural killer

(NK) cell receptors for MHC class I molecules (now designated killer cell Ig- like receptors, or KIRs), was inferred from the observation that NK cells killed HLA class I- deficient cell lines (Ljunggren and Karre, 1990). The inhibition could be disrupted by antibodies against membrane glycoproteins on NK cells that recognized HLA- A and HLA-C (OMIM Ref. No. 142840). Complementary DNA cloning of the receptors revealed a family of genes, designated the killer cell inhibitory receptors. Inhibitory KIRs are found in 3 distinct isoforms. KIRs that recognize HLA- C are usually monomeric glycoproteins of about 58 kD with 2 immunoglobulin- like domains (KIR2D). KIRs that are reactive with HLA- B are approximately 70- kD monomeric glycoproteins with 3 Ig- like domains (KIR3D). KIRs that are reactive with HLA- A also possess 3 extracellular Ig- like domains but are expressed as 2, approximately 70- kD disulfide- linked homodimer subunits. Molecular analysis of KIRs and other inhibitory receptors (e.g., LILRB1, 604811) has revealed a common cytoplasmic sequence (I/VxYxxL/V) called an ITIM (immunoreceptor tyrosine- based inhibitory motif). KIRs with a long cytoplasmic tail have 2 ITIMs (OMIM Ref. No. KIR2DL). Upon MHC I engagement and tyrosine phospho-

rylation of the ITIM, intracellular protein tyrosine phosphatases such as SHP1 (PTPN6; 176883) are recruited, and an inhibitory signal cascade ensues. Other receptors, of about 50 kD (p50s), with short cytoplasmic regions (KIR2DS and KIR3DS) without ITIMs have transmembrane regions containing a charged amino acid and initiate stimulatory cascades by association with DAP12 (TYROBP; 604142), a membrane receptor expressing ITAM (immunoreceptor tyrosine- based activation motif). For reviews of KIRs and other NK receptors, see Lanier (1997, 1998, 2000 KIR2D receptors are divided into 2 families based on their specificities for different HLA- C allotypes. KIR2DL1 has specificity for HLA- C alleles with asn77 and lys80, while KIR2DL2 (OMIM Ref. No. 604937) has specificity for HLA- C alleles with ser77 and asn80. Fan et al. (2001) described the crystal structure of KIR2DL1 and HLA- Cw4 at a resolution of 2.8 angstroms. They determined that met44 of KIR2DL1 is in a pocket that hosts, through both polar and hydrophobic interactions, lys80 of HLA- Cw4

[37194]

[37195] Full details of the abovementioned studies are described in the following publications, the disclosure of which are

hereby incorporated by reference:

[37196] Andre, P.; Biassoni, R.; Colonna, M.; Cosman, D.; Lanier, L. L.; Long, E. O.; Lopez- Botet, M.; Moretta, A.; Moretta, L.; Parham, P.; Trowsdale, J.; Vivier, E.; Wagtmann, N.; Wilson, M. J. : New nomenclature for MHC receptors. Nature Immun. 2: 661 only, 2001. ; and

[37197] Colonna, M.; Samaridis, J. : Cloning of immunoglobulin-superfamily members associated with HLA- C and HLA- B recognition by human natural killer cells. Science 268: 405- 408, 1995.

[37198] Further studies establishing the function and utilities of KIR2DL1 are found in John Hopkins OMIM database record ID 604936, and in cited publications listed in Table 5, which are hereby incorporated by reference.Killer cell immunoglobulin-like receptor, two domains, long cytoplasmic tail, 2 (KIR2DL2, Accession NP_055034.1) is another GAM1032 target gene, herein designated TARGET GENE. KIR2DL2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIR2DL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIR2DL2 BINDING SITE, designated SEQ

ID:7645, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37199] Another function of GAM1032 is therefore inhibition of Killer cell immunoglobulin-like receptor, two domains, long cytoplasmic tail, 2 (KIR2DL2, Accession NP_055034.1), a gene which is a receptor on natural killer cells and inhibits the activity of nk cells thus preventing cell lysis. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIR2DL2.

[37200] The function of KIR2DL2 has been established by previous studies. background information on the KIR family of natural killer (NK) cell Ig- like receptors, see KIR2DL1 (OMIM Ref. No. 604936). By screening NK cells with a KIR2DL3 cDNA probe, Wagtmann et al. (1995) isolated a KIR2DL2 cDNA, which they called clone 43 (CL43), encoding a deduced 348- amino acid type I transmembrane protein. Sequence analysis revealed a structure similar to that described for KIR2DL1, with 2 extracellular C2- type Ig- like domains, a transmembrane domain, and a long cytoplasmic tail with 2 ITIMs (immunoreceptor tyrosine- based inhibitory motifs). Dohring et al. (1996) also identified KIR2DL2, which they termed NKAT6. By analysis of so-

matic cell hybrids, Colonna and Samaridis (1995) and Wagtmann et al. (1995) mapped the KIR gene family to chromosome 19

[37201]

[37202] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[37203] Dohring, C.; Samaridis, J.; Colonna, M. : Alternatively spliced forms of human killer inhibitory receptors. Immunogenetics 44: 227- 230, 1996. ; and

[37204] Wagtmann, N.; Biassoni, R.; Cantoni, C.; Verdiani, S.; Malnati, M. S.; Vitale, M.; Bottino, C.; Moretta, L.; Moretta, A.; Long, E. O. : Molecular clones of the p58 NK cell receptor reve.

[37205] Further studies establishing the function and utilities of KIR2DL2 are found in John Hopkins OMIM database record ID 604937, and in cited publications listed in Table 5, which are hereby incorporated by reference.LKAP (Accession NP_061954.1) is another GAM1032 target gene, herein designated TARGET GENE. LKAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LKAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LKAP BINDING SITE, designated SEQ ID:13514, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37206] Another function of GAM1032 is therefore inhibition of LKAP (Accession NP_061954.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LKAP.

[37207] Ligand of numb-protein x (LNX, Accession NP_116011.1) is another GAM1032 target gene, herein designated TARGET GENE. LNX BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LNX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LNX BINDING SITE, designated SEQ ID:3987, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37208] Another function of GAM1032 is therefore inhibition of Ligand of numb-protein x (LNX, Accession NP_116011.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions

associated with LNX.

[37209] LOC121498 (Accession XP_062669.7) is another GAM1032 target gene, herein designated TARGET GENE. LOC121498 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC121498, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC121498 BINDING SITE, designated SEQ ID:10999, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37210] Another function of GAM1032 is therefore inhibition of LOC121498 (Accession XP_062669.7) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC121498.

[37211] LOC132870 (Accession XP_059608.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC132870 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC132870, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC132870 BINDING SITE, designated SEQ ID:17125, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37212] Another function of GAM1032 is therefore inhibition of LOC132870 (Accession XP_059608.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC132870.

[37213] LOC143188 (Accession XP_096387.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC143188 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC143188, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC143188 BINDING SITE, designated SEQ ID:11783, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37214] Another function of GAM1032 is therefore inhibition of LOC143188 (Accession XP_096387.1) . Accordingly, utili-

ties of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC143188.

[37215] LOC146542 (Accession NP_660314.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC146542 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC146542, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC146542 BINDING SITE, designated SEQ ID:16407, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37216] Another function of GAM1032 is therefore inhibition of LOC146542 (Accession NP_660314.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC146542.

[37217] LOC147622 (Accession XP_097255.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC147622 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LOC147622, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147622 BINDING SITE, designated SEQ ID:4440, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37218] Another function of GAM1032 is therefore inhibition of LOC147622 (Accession XP_097255.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147622.

[37219] LOC147791 (Accession XP_097293.2) is another GAM1032 target gene, herein designated TARGET GENE. LOC147791 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC147791, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC147791 BINDING SITE, designated SEQ ID:4967, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37220] Another function of GAM1032 is therefore inhibition of LOC147791 (Accession XP_097293.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC147791.

[37221] LOC149271 (Accession XP_086475.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC149271 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC149271, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149271 BINDING SITE, designated SEQ ID:5890, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37222] Another function of GAM1032 is therefore inhibition of LOC149271 (Accession XP_086475.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149271.

[37223] LOC149372 (Accession XP_086509.1) is another GAM1032 target gene, herein designated TARGET GENE.

LOC149372 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC149372, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149372 BINDING SITE, designated SEQ ID:19078, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37224] Another function of GAM1032 is therefore inhibition of LOC149372 (Accession XP_086509.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149372.

[37225] LOC149386 (Accession XP_097631.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC149386 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC149386, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC149386 BINDING SITE, designated SEQ ID:6026, to the nucleotide sequence of

GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37226] Another function of GAM1032 is therefore inhibition of LOC149386 (Accession XP_097631.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC149386.

[37227] LOC150166 (Accession XP_097824.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC150166 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150166 BINDING SITE, designated SEQ ID:11388, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37228] Another function of GAM1032 is therefore inhibition of LOC150166 (Accession XP_097824.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150166.

[37229] LOC150225 (Accession XP_097870.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC150225 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150225, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC150225 BINDING SITE, designated SEQ ID:18349, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37230] Another function of GAM1032 is therefore inhibition of LOC150225 (Accession XP_097870.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150225.

[37231] LOC150946 (Accession XP_097977.2) is another GAM1032 target gene, herein designated TARGET GENE. LOC150946 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC150946, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC150946 BINDING SITE, designated SEQ ID:3747, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37232] Another function of GAM1032 is therefore inhibition of LOC150946 (Accession XP_097977.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC150946.

[37233] LOC151162 (Accession XP_098012.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC151162 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC151162, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151162 BINDING SITE, designated SEQ ID:17135, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37234] Another function of GAM1032 is therefore inhibition of LOC151162 (Accession XP_098012.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC151162.

[37235] LOC151647 (Accession XP_087261.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC151647 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC151647, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC151647 BINDING SITE, designated SEQ ID:13917, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37236] Another function of GAM1032 is therefore inhibition of LOC151647 (Accession XP_087261.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC151647.

[37237] LOC152920 (Accession XP_087561.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC152920 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC152920, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC152920 BINDING SITE, designated SEQ ID:10090, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37238] Another function of GAM1032 is therefore inhibition of LOC152920 (Accession XP_087561.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC152920.

[37239] LOC154184 (Accession XP_098488.2) is another GAM1032 target gene, herein designated TARGET GENE. LOC154184 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC154184, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC154184 BINDING SITE, designated SEQ ID:3687, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37240] Another function of GAM1032 is therefore inhibition of

LOC154184 (Accession XP_098488.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC154184.

[37241] LOC157273 (Accession XP_098743.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC157273 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC157273, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157273 BINDING SITE, designated SEQ ID:626, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37242] Another function of GAM1032 is therefore inhibition of LOC157273 (Accession XP_098743.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157273.

[37243] LOC157381 (Accession XP_098754.5) is another GAM1032 target gene, herein designated TARGET GENE. LOC157381 BINDING SITE is a target binding site found in

the 5` untranslated region of mRNA encoded by LOC157381, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157381 BINDING SITE, designated SEQ ID:15936, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37244] Another function of GAM1032 is therefore inhibition of LOC157381 (Accession XP_098754.5) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157381.

[37245] LOC157627 (Accession XP_088347.2) is another GAM1032 target gene, herein designated TARGET GENE. LOC157627 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC157627, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157627 BINDING SITE, designated SEQ ID:17425, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:303.

[37246] Another function of GAM1032 is therefore inhibition of LOC157627 (Accession XP_088347.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157627.

[37247] LOC157653 (Accession XP_088353.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC157653 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC157653, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC157653 BINDING SITE, designated SEQ ID:3788, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37248] Another function of GAM1032 is therefore inhibition of LOC157653 (Accession XP_088353.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC157653.

[37249] LOC163182 (Accession XP_092058.1) is another

GAM1032 target gene, herein designated TARGET GENE. LOC163182 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC163182, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC163182 BINDING SITE, designated SEQ ID:3542, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37250] Another function of GAM1032 is therefore inhibition of LOC163182 (Accession XP_092058.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC163182.

[37251] LOC163223 (Accession XP_092087.3) is another GAM1032 target gene, herein designated TARGET GENE. LOC163223 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC163223, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC163223 BINDING SITE, desig-

nated SEQ ID:12269, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37252] Another function of GAM1032 is therefore inhibition of LOC163223 (Accession XP_092087.3) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC163223.

[37253] LOC170106 (Accession XP_093106.2) is another GAM1032 target gene, herein designated TARGET GENE. LOC170106 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC170106, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC170106 BINDING SITE, designated SEQ ID:17459, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37254] Another function of GAM1032 is therefore inhibition of LOC170106 (Accession XP_093106.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC170106.

[37255] LOC200230 (Accession XP_114166.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC200230 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC200230, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC200230 BINDING SITE, designated SEQ ID:18830, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37256] Another function of GAM1032 is therefore inhibition of LOC200230 (Accession XP_114166.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC200230.

[37257] LOC201292 (Accession NP_775818.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC201292 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC201292, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201292 BINDING SITE, designated SEQ ID:8558, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37258] Another function of GAM1032 is therefore inhibition of LOC201292 (Accession NP_775818.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201292.

[37259] LOC201868 (Accession XP_114393.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC201868 BINDING SITE1 and LOC201868 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC201868, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC201868 BINDING SITE1 and LOC201868 BINDING SITE2, designated SEQ ID:5434 and SEQ ID:13599 respectively, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37260] Another function of GAM1032 is therefore inhibition of

LOC201868 (Accession XP_114393.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC201868.

[37261] LOC221922 (Accession XP_166555.2) is another GAM1032 target gene, herein designated TARGET GENE. LOC221922 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC221922, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC221922 BINDING SITE, designated SEQ ID:15583, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37262] Another function of GAM1032 is therefore inhibition of LOC221922 (Accession XP_166555.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC221922.

[37263] LOC253805 (Accession XP_172854.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC253805 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC253805, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC253805 BINDING SITE, designated SEQ ID:4330, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37264] Another function of GAM1032 is therefore inhibition of LOC253805 (Accession XP_172854.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC253805.

[37265] LOC283442 (Accession XP_211037.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC283442 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283442, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283442 BINDING SITE, designated SEQ ID:5721, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:303.

[37266] Another function of GAM1032 is therefore inhibition of LOC283442 (Accession XP_211037.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283442.

[37267] LOC283624 (Accession XP_211126.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC283624 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283624, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283624 BINDING SITE, designated SEQ ID:953, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37268] Another function of GAM1032 is therefore inhibition of LOC283624 (Accession XP_211126.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283624.

[37269] LOC283741 (Accession XP_208115.1) is another

GAM1032 target gene, herein designated TARGET GENE. LOC283741 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC283741, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283741 BINDING SITE, designated SEQ ID:12978, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37270] Another function of GAM1032 is therefore inhibition of LOC283741 (Accession XP_208115.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283741.

[37271] LOC283753 (Accession XP_208821.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC283753 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283753, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283753 BINDING SITE, desig-

nated SEQ ID:8981, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37272] Another function of GAM1032 is therefore inhibition of LOC283753 (Accession XP_208821.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC283753.

[37273] LOC283801 (Accession XP_208122.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC283801 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC283801, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC283801 BINDING SITE, designated SEQ ID:15824, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37274] Another function of GAM1032 is therefore inhibition of LOC283801 (Accession XP_208122.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC283801.

[37275] LOC284173 (Accession XP_211362.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC284173 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284173, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284173 BINDING SITE, designated SEQ ID:19059, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37276] Another function of GAM1032 is therefore inhibition of LOC284173 (Accession XP_211362.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284173.

[37277] LOC284196 (Accession XP_209067.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC284196 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284196, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284196 BINDING SITE, designated SEQ ID:15363, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37278] Another function of GAM1032 is therefore inhibition of LOC284196 (Accession XP_209067.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284196.

[37279] LOC284266 (Accession XP_211403.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC284266 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC284266, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284266 BINDING SITE, designated SEQ ID:17603, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37280] Another function of GAM1032 is therefore inhibition of LOC284266 (Accession XP_211403.1) . Accordingly, utili-

ties of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284266.

[37281] LOC284280 (Accession XP_211416.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC284280 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284280, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284280 BINDING SITE, designated SEQ ID:6856, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37282] Another function of GAM1032 is therefore inhibition of LOC284280 (Accession XP_211416.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284280.

[37283] LOC284542 (Accession XP_209254.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC284542 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LOC284542, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284542 BINDING SITE, designated SEQ ID:843, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37284] Another function of GAM1032 is therefore inhibition of LOC284542 (Accession XP_209254.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284542.

[37285] LOC284595 (Accession XP_209280.3) is another GAM1032 target gene, herein designated TARGET GENE. LOC284595 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284595, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284595 BINDING SITE, designated SEQ ID:8588, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37286] Another function of GAM1032 is therefore inhibition of LOC284595 (Accession XP_209280.3) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284595.

[37287] LOC284751 (Accession XP_211622.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC284751 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284751, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284751 BINDING SITE, designated SEQ ID:10782, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37288] Another function of GAM1032 is therefore inhibition of LOC284751 (Accession XP_211622.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284751.

[37289] LOC284829 (Accession XP_211645.1) is another GAM1032 target gene, herein designated TARGET GENE.

LOC284829 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284829, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284829 BINDING SITE, designated SEQ ID:12531, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37290] Another function of GAM1032 is therefore inhibition of LOC284829 (Accession XP_211645.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284829.

[37291] LOC284865 (Accession XP_211672.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC284865 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284865, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284865 BINDING SITE, designated SEQ ID:7677, to the nucleotide sequence of

GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37292] Another function of GAM1032 is therefore inhibition of LOC284865 (Accession XP_211672.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284865.

[37293] LOC284965 (Accession XP_209425.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC284965 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284965, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284965 BINDING SITE, designated SEQ ID:8588, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37294] Another function of GAM1032 is therefore inhibition of LOC284965 (Accession XP_209425.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284965.

[37295] LOC284975 (Accession XP_211711.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC284975 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC284975, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC284975 BINDING SITE, designated SEQ ID:7383, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37296] Another function of GAM1032 is therefore inhibition of LOC284975 (Accession XP_211711.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC284975.

[37297] LOC285123 (Accession XP_211773.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC285123 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285123, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC285123 BINDING SITE, designated SEQ ID:5205, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37298] Another function of GAM1032 is therefore inhibition of LOC285123 (Accession XP_211773.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285123.

[37299] LOC285409 (Accession XP_209600.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC285409 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285409, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285409 BINDING SITE, designated SEQ ID:5936, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37300] Another function of GAM1032 is therefore inhibition of LOC285409 (Accession XP_209600.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC285409.

[37301] LOC285442 (Accession XP_208320.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC285442 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285442, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285442 BINDING SITE, designated SEQ ID:16068, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37302] Another function of GAM1032 is therefore inhibition of LOC285442 (Accession XP_208320.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285442.

[37303] LOC285692 (Accession XP_211984.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC285692 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285692, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285692 BINDING SITE, designated SEQ ID:4966, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37304] Another function of GAM1032 is therefore inhibition of LOC285692 (Accession XP_211984.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285692.

[37305] LOC285735 (Accession XP_212002.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC285735 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC285735, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285735 BINDING SITE, designated SEQ ID:4051, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37306] Another function of GAM1032 is therefore inhibition of

LOC285735 (Accession XP_212002.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285735.

[37307] LOC285819 (Accession XP_212053.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC285819 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC285819, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285819 BINDING SITE, designated SEQ ID:16977, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37308] Another function of GAM1032 is therefore inhibition of LOC285819 (Accession XP_212053.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285819.

[37309] LOC285936 (Accession XP_209834.2) is another GAM1032 target gene, herein designated TARGET GENE. LOC285936 BINDING SITE is a target binding site found in

the 5` untranslated region of mRNA encoded by LOC285936, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC285936 BINDING SITE, designated SEQ ID:3314, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37310] Another function of GAM1032 is therefore inhibition of LOC285936 (Accession XP_209834.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC285936.

[37311] LOC286101 (Accession XP_209902.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC286101 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC286101, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286101 BINDING SITE, designated SEQ ID:7174, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:303.

[37312] Another function of GAM1032 is therefore inhibition of LOC286101 (Accession XP_209902.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286101.

[37313] LOC286135 (Accession XP_212196.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC286135 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286135, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286135 BINDING SITE, designated SEQ ID:5795, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37314] Another function of GAM1032 is therefore inhibition of LOC286135 (Accession XP_212196.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286135.

[37315] LOC286221 (Accession XP_212233.1) is another

GAM1032 target gene, herein designated TARGET GENE. LOC286221 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286221, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286221 BINDING SITE, designated SEQ ID:5769, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37316] Another function of GAM1032 is therefore inhibition of LOC286221 (Accession XP_212233.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286221.

[37317] LOC286374 (Accession XP_212293.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC286374 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286374, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286374 BINDING SITE, desig-

nated SEQ ID:14940, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37318] Another function of GAM1032 is therefore inhibition of LOC286374 (Accession XP_212293.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC286374.

[37319] LOC286545 (Accession XP_208450.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC286545 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC286545, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC286545 BINDING SITE, designated SEQ ID:2448, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37320] Another function of GAM1032 is therefore inhibition of LOC286545 (Accession XP_208450.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC286545.

[37321] LOC338609 (Accession XP_294664.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC338609 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338609, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338609 BINDING SITE, designated SEQ ID:15446, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37322] Another function of GAM1032 is therefore inhibition of LOC338609 (Accession XP_294664.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338609.

[37323] LOC338862 (Accession XP_290601.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC338862 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC338862, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC338862 BINDING SITE, designated SEQ ID:3752, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37324] Another function of GAM1032 is therefore inhibition of LOC338862 (Accession XP_290601.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC338862.

[37325] LOC339025 (Accession XP_294778.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC339025 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC339025, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339025 BINDING SITE, designated SEQ ID:10038, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37326] Another function of GAM1032 is therefore inhibition of LOC339025 (Accession XP_294778.1) . Accordingly, utili-

ties of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339025.

[37327] LOC339062 (Accession XP_294795.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC339062 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339062, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339062 BINDING SITE, designated SEQ ID:17771, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37328] Another function of GAM1032 is therefore inhibition of LOC339062 (Accession XP_294795.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339062.

[37329] LOC339502 (Accession XP_294983.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC339502 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by

LOC339502, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339502 BINDING SITE, designated SEQ ID:20113, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37330] Another function of GAM1032 is therefore inhibition of LOC339502 (Accession XP_294983.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339502.

[37331] LOC339581 (Accession XP_293116.2) is another GAM1032 target gene, herein designated TARGET GENE. LOC339581 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339581, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339581 BINDING SITE, designated SEQ ID:9113, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37332] Another function of GAM1032 is therefore inhibition of LOC339581 (Accession XP_293116.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339581.

[37333] LOC339663 (Accession XP_295028.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC339663 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC339663, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC339663 BINDING SITE, designated SEQ ID:14951, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37334] Another function of GAM1032 is therefore inhibition of LOC339663 (Accession XP_295028.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC339663.

[37335] LOC340064 (Accession XP_295144.1) is another GAM1032 target gene, herein designated TARGET GENE.

LOC340064 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC340064, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340064 BINDING SITE, designated SEQ ID:3820, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37336] Another function of GAM1032 is therefore inhibition of LOC340064 (Accession XP_295144.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340064.

[37337] LOC340323 (Accession XP_291236.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC340323 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340323, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340323 BINDING SITE, designated SEQ ID:5378, to the nucleotide sequence of

GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37338] Another function of GAM1032 is therefore inhibition of LOC340323 (Accession XP_291236.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340323.

[37339] LOC340428 (Accession XP_290420.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC340428 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC340428, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC340428 BINDING SITE, designated SEQ ID:6280, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37340] Another function of GAM1032 is therefore inhibition of LOC340428 (Accession XP_290420.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC340428.

[37341] LOC344360 (Accession XP_297561.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC344360 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC344360, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC344360 BINDING SITE, designated SEQ ID:15185, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37342] Another function of GAM1032 is therefore inhibition of LOC344360 (Accession XP_297561.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC344360.

[37343] LOC344563 (Accession XP_297716.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC344563 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC344563, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC344563 BINDING SITE, designated SEQ ID:676, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37344] Another function of GAM1032 is therefore inhibition of LOC344563 (Accession XP_297716.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC344563.

[37345] LOC347240 (Accession XP_294563.2) is another GAM1032 target gene, herein designated TARGET GENE. LOC347240 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC347240, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC347240 BINDING SITE, designated SEQ ID:17210, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37346] Another function of GAM1032 is therefore inhibition of LOC347240 (Accession XP_294563.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC347240.

[37347] LOC347853 (Accession XP_300546.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC347853 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC347853, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC347853 BINDING SITE, designated SEQ ID:8070, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37348] Another function of GAM1032 is therefore inhibition of LOC347853 (Accession XP_300546.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347853.

[37349] LOC347905 (Accession XP_302624.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC347905 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC347905, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC347905 BINDING SITE, designated SEQ ID:2888, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37350] Another function of GAM1032 is therefore inhibition of LOC347905 (Accession XP_302624.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347905.

[37351] LOC347921 (Accession XP_300275.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC347921 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC347921, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC347921 BINDING SITE, designated SEQ ID:10678, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37352] Another function of GAM1032 is therefore inhibition of

LOC347921 (Accession XP_300275.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC347921.

[37353] LOC348378 (Accession XP_300723.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC348378 BINDING SITE1 and LOC348378 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by LOC348378, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348378 BINDING SITE1 and LOC348378 BINDING SITE2, designated SEQ ID:10330 and SEQ ID:6570 respectively, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37354] Another function of GAM1032 is therefore inhibition of LOC348378 (Accession XP_300723.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348378.

[37355] LOC348454 (Accession XP_290909.1) is another GAM1032 target gene, herein designated TARGET GENE.

LOC348454 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348454, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348454 BINDING SITE, designated SEQ ID:14041, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37356] Another function of GAM1032 is therefore inhibition of LOC348454 (Accession XP_290909.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348454.

[37357] LOC348504 (Accession XP_300769.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC348504 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348504, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348504 BINDING SITE, designated SEQ ID:5434, to the nucleotide sequence of

GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37358] Another function of GAM1032 is therefore inhibition of LOC348504 (Accession XP_300769.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348504.

[37359] LOC348529 (Accession XP_302813.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC348529 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC348529, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348529 BINDING SITE, designated SEQ ID:3393, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37360] Another function of GAM1032 is therefore inhibition of LOC348529 (Accession XP_302813.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348529.

[37361] LOC348701 (Accession XP_300810.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC348701 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348701, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348701 BINDING SITE, designated SEQ ID:5909, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37362] Another function of GAM1032 is therefore inhibition of LOC348701 (Accession XP_300810.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348701.

[37363] LOC348704 (Accession XP_302859.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC348704 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348704, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of LOC348704 BINDING SITE, designated SEQ ID:1119, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37364] Another function of GAM1032 is therefore inhibition of LOC348704 (Accession XP_302859.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348704.

[37365] LOC348843 (Accession XP_302903.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC348843 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348843, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348843 BINDING SITE, designated SEQ ID:13599, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37366] Another function of GAM1032 is therefore inhibition of LOC348843 (Accession XP_302903.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with LOC348843.

[37367] LOC348929 (Accession XP_300881.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC348929 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC348929, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC348929 BINDING SITE, designated SEQ ID:3253, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37368] Another function of GAM1032 is therefore inhibition of LOC348929 (Accession XP_300881.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC348929.

[37369] LOC349098 (Accession XP_300943.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC349098 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349098, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349098 BINDING SITE, designated SEQ ID:5378, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37370] Another function of GAM1032 is therefore inhibition of LOC349098 (Accession XP_300943.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349098.

[37371] LOC349303 (Accession XP_301018.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC349303 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349303, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349303 BINDING SITE, designated SEQ ID:9235, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37372] Another function of GAM1032 is therefore inhibition of

LOC349303 (Accession XP_301018.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349303.

[37373] LOC349315 (Accession XP_301025.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC349315 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349315, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349315 BINDING SITE, designated SEQ ID:9235, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37374] Another function of GAM1032 is therefore inhibition of LOC349315 (Accession XP_301025.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349315.

[37375] LOC349317 (Accession XP_301026.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC349317 BINDING SITE is a target binding site found in

the 3` untranslated region of mRNA encoded by LOC349317, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349317 BINDING SITE, designated SEQ ID:15717, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37376] Another function of GAM1032 is therefore inhibition of LOC349317 (Accession XP_301026.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349317.

[37377] LOC349333 (Accession XP_301035.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC349333 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349333, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349333 BINDING SITE, designated SEQ ID:15717, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:303.

[37378] Another function of GAM1032 is therefore inhibition of LOC349333 (Accession XP_301035.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349333.

[37379] LOC349338 (Accession XP_301040.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC349338 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC349338, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC349338 BINDING SITE, designated SEQ ID:8588, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37380] Another function of GAM1032 is therefore inhibition of LOC349338 (Accession XP_301040.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC349338.

[37381] LOC350448 (Accession XP_304096.1) is another

GAM1032 target gene, herein designated TARGET GENE. LOC350448 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC350448, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC350448 BINDING SITE, designated SEQ ID:10058, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37382] Another function of GAM1032 is therefore inhibition of LOC350448 (Accession XP_304096.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC350448.

[37383] LOC352386 (Accession XP_305612.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC352386 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC352386, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC352386 BINDING SITE, desig-

nated SEQ ID:4515, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37384] Another function of GAM1032 is therefore inhibition of LOC352386 (Accession XP_305612.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC352386.

[37385] LOC352691 (Accession XP_302538.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC352691 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC352691, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC352691 BINDING SITE, designated SEQ ID:17140, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37386] Another function of GAM1032 is therefore inhibition of LOC352691 (Accession XP_302538.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

LOC352691.

[37387] LOC51333 (Accession NP_057727.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC51333 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC51333, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC51333 BINDING SITE, designated SEQ ID:8816, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37388] Another function of GAM1032 is therefore inhibition of LOC51333 (Accession NP_057727.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC51333.

[37389] LOC90246 (Accession XP_030283.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC90246 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC90246, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

LOC90246 BINDING SITE, designated SEQ ID:4074, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37390] Another function of GAM1032 is therefore inhibition of LOC90246 (Accession XP_030283.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90246.

[37391] LOC90785 (Accession XP_034110.1) is another GAM1032 target gene, herein designated TARGET GENE. LOC90785 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LOC90785, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC90785 BINDING SITE, designated SEQ ID:13538, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37392] Another function of GAM1032 is therefore inhibition of LOC90785 (Accession XP_034110.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC90785.

[37393] LOC91974 (Accession XP_041974.2) is another GAM1032 target gene, herein designated TARGET GENE. LOC91974 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by LOC91974, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LOC91974 BINDING SITE, designated SEQ ID:16067, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37394] Another function of GAM1032 is therefore inhibition of LOC91974 (Accession XP_041974.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LOC91974.

[37395] Lipin 2 (LPIN2, Accession NP_055461.1) is another GAM1032 target gene, herein designated TARGET GENE. LPIN2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LPIN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LPIN2 BINDING SITE, designated SEQ ID:1006, to the nu-

cleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37396] Another function of GAM1032 is therefore inhibition of Lipin 2 (LPIN2, Accession NP_055461.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LPIN2.

[37397] Leucine-rich repeats and immunoglobulin-like domains 1 (LRIG1, Accession NP_056356.1) is another GAM1032 target gene, herein designated TARGET GENE. LRIG1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LRIG1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LRIG1 BINDING SITE, designated SEQ ID:2045, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37398] Another function of GAM1032 is therefore inhibition of Leucine-rich repeats and immunoglobulin-like domains 1 (LRIG1, Accession NP_056356.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LRIG1.

[37399] Lanosterol synthase (2,3-oxidosqualene-lanosterol cyclase) (LSS, Accession NP_002331.2) is another GAM1032 target gene, herein designated TARGET GENE. LSS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by LSS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of LSS BINDING SITE, designated SEQ ID:18091, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37400] Another function of GAM1032 is therefore inhibition of Lanosterol synthase (2,3-oxidosqualene-lanosterol cyclase) (LSS, Accession NP_002331.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with LSS.

[37401] Methyl-cpg binding domain protein 2 (MBD2, Accession NP_056647.1) is another GAM1032 target gene, herein designated TARGET GENE. MBD2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by MBD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the

complementarity of the nucleotide sequences of MBD2 BINDING SITE, designated SEQ ID:13083, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37402] Another function of GAM1032 is therefore inhibition of Methyl-cpg binding domain protein 2 (MBD2, Accession NP_056647.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MBD2.

[37403] Melanoma cell adhesion molecule (MCAM, Accession NP_006491.1) is another GAM1032 target gene, herein designated TARGET GENE. MCAM BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MCAM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MCAM BINDING SITE, designated SEQ ID:16374, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37404] Another function of GAM1032 is therefore inhibition of Melanoma cell adhesion molecule (MCAM, Accession NP_006491.1) . Accordingly, utilities of GAM1032 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with MCAM.

[37405] MGC10200 (Accession NP_659497.1) is another GAM1032 target gene, herein designated TARGET GENE. MGC10200 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC10200, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC10200 BINDING SITE, designated SEQ ID:18523, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37406] Another function of GAM1032 is therefore inhibition of MGC10200 (Accession NP_659497.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC10200.

[37407] MGC2574 (Accession NP_077003.1) is another GAM1032 target gene, herein designated TARGET GENE. MGC2574 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC2574, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of MGC2574 BINDING SITE, designated SEQ ID:16697, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37408] Another function of GAM1032 is therefore inhibition of MGC2574 (Accession NP_077003.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC2574.

[37409] MGC34648 (Accession NP_689873.1) is another GAM1032 target gene, herein designated TARGET GENE. MGC34648 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC34648, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC34648 BINDING SITE, designated SEQ ID:14517, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37410] Another function of GAM1032 is therefore inhibition of MGC34648 (Accession NP_689873.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

MGC34648.

[37411] MGC45441 (Accession NP_689712.1) is another GAM1032 target gene, herein designated TARGET GENE. MGC45441 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MGC45441, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MGC45441 BINDING SITE, designated SEQ ID:11172, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37412] Another function of GAM1032 is therefore inhibition of MGC45441 (Accession NP_689712.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MGC45441.

[37413] Antigen identified by monoclonal antibody ki-67 (MKI67, Accession NP_002408.2) is another GAM1032 target gene, herein designated TARGET GENE. MKI67 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MKI67, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementar-

ity of the nucleotide sequences of MKI67 BINDING SITE, designated SEQ ID:7829, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37414] Another function of GAM1032 is therefore inhibition of Antigen identified by monoclonal antibody ki-67 (MKI67, Accession NP_002408.2), a gene which thought to be required for maintaining cell proliferation. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MKI67.

[37415] The function of MKI67 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM330.2.Myeloperoxidase (MPO, Accession NP_000241.1) is another GAM1032 target gene, herein designated TARGET GENE. MPO BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by MPO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MPO BINDING SITE, designated SEQ ID:14549, to the nucleotide sequence of GAM1032

RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37416] Another function of GAM1032 is therefore inhibition of Myeloperoxidase (MPO, Accession NP_000241.1), a gene which is present in primary granules of neutrophilic granulocytes. and therefore is associated with Acute promyelocytic leukemia, alzheimer disease. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of Acute promyelocytic leukemia, alzheimer disease., and of other diseases and clinical conditions associated with MPO.

[37417] The function of MPO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM374.1.Membrane-spanning 4-domains, subfamily a, member 8b (MS4A8B, Accession NP_113645.1) is another GAM1032 target gene, herein designated TARGET GENE. MS4A8B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MS4A8B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MS4A8B BINDING SITE, designated

SEQ ID:7880, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37418] Another function of GAM1032 is therefore inhibition of Membrane-spanning 4-domains, subfamily a, member 8b (MS4A8B, Accession NP_113645.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MS4A8B.

[37419] 5-methyltetrahydrofolate-homocysteine methyltransferase (MTR, Accession NP_000245.1) is another GAM1032 target gene, herein designated TARGET GENE. MTR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MTR BINDING SITE, designated SEQ ID:12733, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37420] Another function of GAM1032 is therefore inhibition of 5-methyltetrahydrofolate-homocysteine methyltransferase (MTR, Accession NP_000245.1) . Accordingly, utili-

ties of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MTR.

[37421] MTRF1L (Accession NP_061914.2) is another GAM1032 target gene, herein designated TARGET GENE. MTRF1L BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by MTRF1L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of MTRF1L BINDING SITE, designated SEQ ID:16068, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37422] Another function of GAM1032 is therefore inhibition of MTRF1L (Accession NP_061914.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with MTRF1L.

[37423] Nanog (Accession NP_079141.1) is another GAM1032 target gene, herein designated TARGET GENE. Nanog BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by Nanog, corresponding to a target binding site such as BINDING SITE I, BINDING

SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of Nanog BINDING SITE, designated SEQ ID:12978, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37424] Another function of GAM1032 is therefore inhibition of Nanog (Accession NP_079141.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with Nanog.

[37425] Nuclear receptor coactivator 6 (NCOA6, Accession NP_054790.1) is another GAM1032 target gene, herein designated TARGET GENE. NCOA6 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by NCOA6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NCOA6 BINDING SITE, designated SEQ ID:10389, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37426] Another function of GAM1032 is therefore inhibition of Nuclear receptor coactivator 6 (NCOA6, Accession NP_054790.1), a gene which activates gene transcription

through ligand- dependent association with coactivators. and therefore may be associated with Breast cancer. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of Breast cancer., and of other diseases and clinical conditions associated with NCOA6.

[37427] The function of NCOA6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM161.1.Neural precursor cell expressed, developmentally down-regulated 4 (NEDD4, Accession XP_046129.4) is another GAM1032 target gene, herein designated TARGET GENE. NEDD4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NEDD4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NEDD4 BINDING SITE, designated SEQ ID:6062, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37428] Another function of GAM1032 is therefore inhibition of Neural precursor cell expressed, developmentally down-regulated 4 (NEDD4, Accession XP_046129.4), a gene

which ubiquitinates regulatory proteins involved in transcription. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NEDD4.

[37429] The function of NEDD4 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM48.2.Sialidase 3 (membrane sialidase) (NEU3, Accession NP_006647.2) is another GAM1032 target gene, herein designated TARGET GENE. NEU3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NEU3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NEU3 BINDING SITE, designated SEQ ID:12441, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37430] Another function of GAM1032 is therefore inhibition of Sialidase 3 (membrane sialidase) (NEU3, Accession NP_006647.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with NEU3.

[37431] Notch homolog 3 (drosophila) (NOTCH3, Accession NP_000426.1) is another GAM1032 target gene, herein designated TARGET GENE. NOTCH3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by NOTCH3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of NOTCH3 BINDING SITE, designated SEQ ID:8237, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37432] Another function of GAM1032 is therefore inhibition of Notch homolog 3 (drosophila) (NOTCH3, Accession NP_000426.1), a gene which may function in cell fate specification during development. and therefore may be associated with Cerebral autosomal dominant arteriopathy with subcortical infarcts and leukoencephalopathy (cadasil). Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of Cerebral autosomal dominant arteriopathy with subcortical infarcts and leukoencephalopathy (cadasil), and of other diseases and clinical conditions associated with NOTCH3.

[37433] The function of NOTCH3 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM195.2.Olfactory receptor, family 2, subfamily h, member 1 (OR2H1, Accession NP_112145.1) is another GAM1032 target gene, herein designated TARGET GENE. OR2H1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by OR2H1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of OR2H1 BINDING SITE, designated SEQ ID:19602, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37434] Another function of GAM1032 is therefore inhibition of Olfactory receptor, family 2, subfamily h, member 1 (OR2H1, Accession NP_112145.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with OR2H1.

[37435] Phosphoinositide-3-kinase, catalytic, gamma polypeptide (PIK3CG, Accession NP_002640.2) is another GAM1032 target gene, herein designated TARGET GENE. PIK3CG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PIK3CG, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PIK3CG BINDING SITE, designated SEQ ID:6205, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37436] Another function of GAM1032 is therefore inhibition of Phosphoinositide-3-kinase, catalytic, gamma polypeptide (PIK3CG, Accession NP_002640.2), a gene which regulating cell growth. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PIK3CG.

[37437] The function of PIK3CG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM347.1.Proteolipid protein 1 (pelizaeus-merzbacher disease, spastic paraplegia 2, uncomplicated) (PLP1, Accession NP_000524.2) is another GAM1032 target gene, herein designated TARGET GENE. PLP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PLP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementar-

ity of the nucleotide sequences of PLP1 BINDING SITE, designated SEQ ID:17932, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37438] Another function of GAM1032 is therefore inhibition of Proteolipid protein 1 (pelizaeus-merzbacher disease, spastic paraplegia 2, uncomplicated) (PLP1, Accession NP_000524.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PLP1.

[37439] Paraneoplastic antigen ma2 (PNMA2, Accession NP_009188.1) is another GAM1032 target gene, herein designated TARGET GENE. PNMA2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PNMA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PNMA2 BINDING SITE, designated SEQ ID:15213, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37440] Another function of GAM1032 is therefore inhibition of Paraneoplastic antigen ma2 (PNMA2, Accession

NP_009188.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PNMA2.

[37441] Protein o-fucosyltransferase 1 (POFUT1, Accession NP_056167.1) is another GAM1032 target gene, herein designated TARGET GENE. POFUT1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by POFUT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POFUT1 BINDING SITE, designated SEQ ID:3733, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37442] Another function of GAM1032 is therefore inhibition of Protein o-fucosyltransferase 1 (POFUT1, Accession NP_056167.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POFUT1.

[37443] Polymerase (dna directed), gamma (POLG, Accession NP_002684.1) is another GAM1032 target gene, herein designated TARGET GENE. POLG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by POLG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POLG BINDING SITE, designated SEQ ID:10516, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37444] Another function of GAM1032 is therefore inhibition of Polymerase (dna directed), gamma (POLG, Accession NP_002684.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POLG.

[37445] Polymerase (dna directed), mu (POLM, Accession NP_037416.1) is another GAM1032 target gene, herein designated TARGET GENE. POLM BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by POLM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of POLM BINDING SITE, designated SEQ ID:6542, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37446] Another function of GAM1032 is therefore inhibition of Polymerase (dna directed), mu (POLM, Accession NP_037416.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with POLM.

[37447] Peroxisome proliferative activated receptor, gamma, coactivator 1 (PPARGC1, Accession NP_037393.1) is another GAM1032 target gene, herein designated TARGET GENE. PPARGC1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PPARGC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPARGC1 BINDING SITE, designated SEQ ID:9562, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37448] Another function of GAM1032 is therefore inhibition of Peroxisome proliferative activated receptor, gamma, coactivator 1 (PPARGC1, Accession NP_037393.1), a gene which may play a role in insulin sensitivity and thermogenesis and therefore may be associated with Familial partial lipodystrophy and type ii diabetes. Accordingly, utilities of

GAM1032 include diagnosis, prevention and treatment of Familial partial lipodystrophy and type ii diabetes, and of other diseases and clinical conditions associated with PPARGC1.

[37449] The function of PPARGC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM169.1.Protein phosphatase 1, regulatory (inhibitor) subunit 13b (PPP1R13B, Accession NP_056131.1) is another GAM1032 target gene, herein designated TARGET GENE. PPP1R13B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PPP1R13B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PPP1R13B BINDING SITE, designated SEQ ID:10316, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37450] Another function of GAM1032 is therefore inhibition of Protein phosphatase 1, regulatory (inhibitor) subunit 13b (PPP1R13B, Accession NP_056131.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with PPP1R13B.

[37451] Protein kinase c, mu (PRKCM, Accession NP_002733.1) is another GAM1032 target gene, herein designated TARGET GENE. PRKCM BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PRKCM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRKCM BINDING SITE, designated SEQ ID:3896, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37452] Another function of GAM1032 is therefore inhibition of Protein kinase c, mu (PRKCM, Accession NP_002733.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRKCM.

[37453] PRO0659 (Accession NP_054857.2) is another GAM1032 target gene, herein designated TARGET GENE. PRO0659 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by PRO0659, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PRO0659 BINDING SITE, designated SEQ ID:18366, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37454] Another function of GAM1032 is therefore inhibition of PRO0659 (Accession NP_054857.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PRO0659.

[37455] Prostein (Accession NP_149093.1) is another GAM1032 target gene, herein designated TARGET GENE. Prostein BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by Prostein, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of Prostein BINDING SITE, designated SEQ ID:12567, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37456] Another function of GAM1032 is therefore inhibition of Prostein (Accession NP_149093.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with Prostein.

[37457] Psoriasis susceptibility 1 candidate 1 (PSORS1C1, Accession NP_054787.1) is another GAM1032 target gene, herein designated TARGET GENE. PSORS1C1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PSORS1C1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PSORS1C1 BINDING SITE, designated SEQ ID:11955, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37458] Another function of GAM1032 is therefore inhibition of Psoriasis susceptibility 1 candidate 1 (PSORS1C1, Accession NP_054787.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PSORS1C1.

[37459] PTP9Q22 (Accession NP_818931.1) is another GAM1032 target gene, herein designated TARGET GENE. PTP9Q22 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PTP9Q22, corresponding to a target binding site such

as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTP9Q22 BINDING SITE, designated SEQ ID:4253, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37460] Another function of GAM1032 is therefore inhibition of PTP9Q22 (Accession NP_818931.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTP9Q22.

[37461] PTP9Q22 (Accession NP_689635.3) is another GAM1032 target gene, herein designated TARGET GENE. PTP9Q22 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PTP9Q22, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTP9Q22 BINDING SITE, designated SEQ ID:4253, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37462] Another function of GAM1032 is therefore inhibition of

PTP9Q22 (Accession NP_689635.3) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with PTP9Q22.

[37463] Protein tyrosine phosphatase, receptor type, o (PTPRO, Accession NP_109595.1) is another GAM1032 target gene, herein designated TARGET GENE. PTPRO BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PTPRO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTPRO BINDING SITE, designated SEQ ID:1369, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37464] Another function of GAM1032 is therefore inhibition of Protein tyrosine phosphatase, receptor type, o (PTPRO, Accession NP_109595.1), a gene which may function as a cell contact receptor that mediates and controls cell- cell signals and therefore may be associated with Pancreatic carcinoma. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of Pancreatic carcinoma, and of other diseases and clinical conditions asso-

ciated with PTPRO.

[37465] The function of PTPRO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM207.2.Protein tyrosine phosphatase, receptor type, o (PTPRO, Accession NP_109596.1) is another GAM1032 target gene, herein designated TARGET GENE. PTPRO BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by PTPRO, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PTPRO BINDING SITE, designated SEQ ID:1369, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37466] Another function of GAM1032 is therefore inhibition of Protein tyrosine phosphatase, receptor type, o (PTPRO, Accession NP_109596.1), a gene which may function as a cell contact receptor that mediates and controls cell- cell signals and therefore may be associated with Pancreatic carcinoma. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of Pancreatic carci-

noma, and of other diseases and clinical conditions associated with PTPRO.

[37467] The function of PTPRO and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM207.2.Paxillin (PXN, Accession NP_002850.1) is another GAM1032 target gene, herein designated TARGET GENE. PXN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by PXN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of PXN BINDING SITE, designated SEQ ID:16601, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37468] Another function of GAM1032 is therefore inhibition of Paxillin (PXN, Accession NP_002850.1), a gene which may be involved in p53- dependent apoptosis and therefore may be associated with Cancer. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of Cancer, and of other diseases and clinical conditions associated with PXN.

[37469] The function of PXN and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Ran binding protein 17 (RANBP17, Accession NP_075048.1) is another GAM1032 target gene, herein designated TARGET GENE. RANBP17 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RANBP17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RANBP17 BINDING SITE, designated SEQ ID:3335, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37470] Another function of GAM1032 is therefore inhibition of Ran binding protein 17 (RANBP17, Accession NP_075048.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RANBP17.

[37471] Retinoblastoma 1 (including osteosarcoma) (RB1, Accession NP_000312.1) is another GAM1032 target gene, herein designated TARGET GENE. RB1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RB1, corresponding to a target binding

site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RB1 BINDING SITE, designated SEQ ID:12895, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37472] Another function of GAM1032 is therefore inhibition of Retinoblastoma 1 (including osteosarcoma) (RB1, Accession NP_000312.1), a gene which probably acts as a regulator of other genes and therefore is associated with Retinoblastoma. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of Retinoblastoma, and of other diseases and clinical conditions associated with RB1.

[37473] The function of RB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM519.1.Regulatory factor x, 5 (influences hla class ii expression) (RFX5, Accession NP_000440.1) is another GAM1032 target gene, herein designated TARGET GENE. RFX5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RFX5, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RFX5 BINDING SITE, designated SEQ ID:16892, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37474] Another function of GAM1032 is therefore inhibition of Regulatory factor x, 5 (influences hla class ii expression) (RFX5, Accession NP_000440.1), a gene which activates transcription from class ii mhc promoters. and therefore may be associated with Bare lymphocyte syndrome type ii complementation group c (or hla class ii- deficient combined immunodeficiency); a form of severe combined immunodeficiency disease (scid). Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of Bare lymphocyte syndrome type ii complementation group c (or hla class ii- deficient combined immunodeficiency); a form of severe combined immunodeficiency disease (scid)., and of other diseases and clinical conditions associated with RFX5.

[37475] The function of RFX5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM329.1.Regulator of g-protein signalling 11 (RGS11,

Accession NP_003825.1) is another GAM1032 target gene, herein designated TARGET GENE. RGS11 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RGS11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RGS11 BINDING SITE, designated SEQ ID:1065, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37476] Another function of GAM1032 is therefore inhibition of Regulator of g-protein signalling 11 (RGS11, Accession NP_003825.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RGS11.

[37477] RINZF (Accession NP_076418.2) is another GAM1032 target gene, herein designated TARGET GENE. RINZF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RINZF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RINZF BINDING SITE, designated SEQ ID:7593, to the nucleotide se-

quence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37478] Another function of GAM1032 is therefore inhibition of RINZF (Accession NP_076418.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RINZF.

[37479] RNASE3L (Accession NP_037367.2) is another GAM1032 target gene, herein designated TARGET GENE. RNASE3L BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RNASE3L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNASE3L BINDING SITE, designated SEQ ID:16650, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37480] Another function of GAM1032 is therefore inhibition of RNASE3L (Accession NP_037367.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RNASE3L.

[37481] Ring finger protein (c3h2c3 type) 6 (RNF6, Accession NP_005968.1) is another GAM1032 target gene, herein

designated TARGET GENE. RNF6 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by RNF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RNF6 BINDING SITE, designated SEQ ID:3285, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37482] Another function of GAM1032 is therefore inhibition of Ring finger protein (c3h2c3 type) 6 (RNF6, Accession NP_005968.1), a gene which is a RING finger protein, may be a tumor suppressor and therefore may be associated with Esophageal squamous cell carcinoma, somatic. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of Esophageal squamous cell carcinoma, somatic, and of other diseases and clinical conditions associated with RNF6.

[37483] The function of RNF6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM515.1.Retinoid x receptor, alpha (RXRA, Accession NP_002948.1) is another GAM1032 target gene, herein

designated TARGET GENE. RXRA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by RXRA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of RXRA BINDING SITE, designated SEQ ID:11932, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37484] Another function of GAM1032 is therefore inhibition of Retinoid x receptor, alpha (RXRA, Accession NP_002948.1), a gene which activates genes required for vitamin A metabolism, binds 9- cis retinoic acid. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with RXRA.

[37485] The function of RXRA and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM146.1.SBLF (Accession NP_006864.2) is another GAM1032 target gene, herein designated TARGET GENE. SBLF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SBLF, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SBLF BINDING SITE, designated SEQ ID:8023, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37486] Another function of GAM1032 is therefore inhibition of SBLF (Accession NP_006864.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SBLF.

[37487] Sodium channel, voltage-gated, type ii, beta polypeptide (SCN2B, Accession NP_004579.1) is another GAM1032 target gene, herein designated TARGET GENE. SCN2B BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SCN2B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SCN2B BINDING SITE, designated SEQ ID:635, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37488] Another function of GAM1032 is therefore inhibition of Sodium channel, voltage-gated, type ii, beta polypeptide

(SCN2B, Accession NP_004579.1), a gene which modulates channel properties. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SCN2B.

[37489] The function of SCN2B and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Serine (or cysteine) proteinase inhibitor, clade a (alpha-1 antiproteinase, antitrypsin), member 3 (SERPINA3, Accession NP_001076.1) is another GAM1032 target gene, herein designated TARGET GENE. SERPINA3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SERPINA3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SERPINA3 BINDING SITE, designated SEQ ID:2046, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37490] Another function of GAM1032 is therefore inhibition of Serine (or cysteine) proteinase inhibitor, clade a (alpha-1 antiproteinase, antitrypsin), member 3 (SERPINA3, Accession NP_001076.1), a gene which is a member of the ser-

pin family of serine protease inhibitors. and therefore may be associated with Chronic obstructive pulmonary disease (copd) or of occlusive cerebrovascular disease. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of Chronic obstructive pulmonary disease (copd) or of occlusive cerebrovascular disease, and of other diseases and clinical conditions associated with SERPINA3.

[37491] The function of SERPINA3 has been established by previous studies. Alpha- 1- antichymotrypsin is a plasma protease inhibitor synthesized in the liver. It is a single glycopeptide chain of about 68,000 daltons and belongs to the class of serine protease inhibitors. In man, the normal serum level is about one- tenth that of alpha- 1- antitrypsin (PI; 107400), with which it shares nucleic acid and protein sequence homology (Chandra et al., 1983). Both are major acute phase reactants; their concentrations in plasma increase in response to trauma, surgery, and infection. Antithrombin III, which also is structurally similar to alpha- 1- antitrypsin, shows less sequence homology to antichymotrypsin and is not an acute phase reactant. Kelsey et al. (1988) cloned and analyzed the AACT gene, partly because of the possibility that genetic variation in

other protease inhibitors may influence the prognosis in AAT deficiency. They isolated the AACT gene on a series of cosmid clones, with restriction mapping of about 70 kb around the gene.

[37492]

[37493] Full details of the abovementioned studies are described in the following publications, the disclosure of which are hereby incorporated by reference:

[37494] Chandra, T.; Stackhouse, R.; Kidd, V. J.; Robson, K. J. H.; Woo, S. L. C. : Sequence homology between human alpha- 1- antichymotrypsin, alpha- 1- antitrypsin, and antithrombin III. Biochemistry 22: 5055- 5061, 1983. ; and

[37495] Kelsey, G. D.; Abeliovich, D.; McMahon, C. J.; Whitehouse, D.; Corney, G.; Povey, S.; Hopkinson, D. A.; Wolfe, J.; Mieli- Vergani, G.; Mowat, A. P. : Cloning of the human alpha- 1 antichym.

[37496] Further studies establishing the function and utilities of SERPINA3 are found in John Hopkins OMIM database record ID 107280, and in cited publications listed in Table 5, which are hereby incorporated by reference.SF4 (Accession NP_066987.1) is another GAM1032 target gene, herein designated TARGET GENE. SF4 BINDING SITE is a target binding site found in the 3` untranslated re-

gion of mRNA encoded by SF4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SF4 BINDING SITE, designated SEQ ID:860, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37497] Another function of GAM1032 is therefore inhibition of SF4 (Accession NP_066987.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SF4.

[37498] Sialyltransferase 1 (beta-galactoside alpha-2,6-sialytransferase) (SIAT1, Accession NP_775323.1) is another GAM1032 target gene, herein designated TARGET GENE. SIAT1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SIAT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIAT1 BINDING SITE, designated SEQ ID:11766, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37499] Another function of GAM1032 is therefore inhibition of Sialyltransferase 1 (beta-galactoside alpha-2,6-sialytransferase) (SIAT1, Accession NP_775323.1), a gene which transfers sialic acid from the donor of substrate cmp- sialic acid to galactose containing acceptor substrates. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIAT1.

[37500] The function of SIAT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.2.Sialyltransferase 1 (beta-galactoside alpha-2,6-sialytransferase) (SIAT1, Accession NP_775324.1) is another GAM1032 target gene, herein designated TARGET GENE. SIAT1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SIAT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIAT1 BINDING SITE, designated SEQ ID:11766, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37501] Another function of GAM1032 is therefore inhibition of Sialyltransferase 1 (beta-galactoside alpha-2,6-sialytransferase) (SIAT1, Accession NP_775324.1), a gene which transfers sialic acid from the donor of substrate cmp- sialic acid to galactose containing acceptor substrates. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIAT1.

[37502] The function of SIAT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.2.Sialyltransferase 1 (beta-galactoside alpha-2,6-sialytransferase) (SIAT1, Accession NP_003023.1) is another GAM1032 target gene, herein designated TARGET GENE. SIAT1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by SIAT1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SIAT1 BINDING SITE, designated SEQ ID:11766, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37503] Another function of GAM1032 is therefore inhibition of Sialyltransferase 1 (beta-galactoside alpha-2,6-sialytransferase) (SIAT1, Accession NP_003023.1), a gene which transfers sialic acid from the donor of substrate cmp- sialic acid to galactose containing acceptor substrates. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SIAT1.

[37504] The function of SIAT1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.2.Solute carrier family 12 (potassium/chloride transporters), member 7 (SLC12A7, Accession NP_006589.1) is another GAM1032 target gene, herein designated TARGET GENE. SLC12A7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC12A7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC12A7 BINDING SITE, designated SEQ ID:17066, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37505] Another function of GAM1032 is therefore inhibition of Solute carrier family 12 (potassium/chloride transporters), member 7 (SLC12A7, Accession NP_006589.1), a gene which is a potassium/chloride- cotransporter. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC12A7.

[37506] The function of SLC12A7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM105.1.SLC35A4 (Accession NP_542401.1) is another GAM1032 target gene, herein designated TARGET GENE. SLC35A4 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SLC35A4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC35A4 BINDING SITE, designated SEQ ID:5796, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37507] Another function of GAM1032 is therefore inhibition of SLC35A4 (Accession NP_542401.1) . Accordingly, utilities

of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC35A4.

[37508] SLC35E2 (Accession XP_049733.6) is another GAM1032 target gene, herein designated TARGET GENE. SLC35E2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SLC35E2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SLC35E2 BINDING SITE, designated SEQ ID:14041, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37509] Another function of GAM1032 is therefore inhibition of SLC35E2 (Accession XP_049733.6) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SLC35E2.

[37510] Smith-magenis syndrome chromosome region, candidate 5 (SMCR5, Accession NP_658987.1) is another GAM1032 target gene, herein designated TARGET GENE. SMCR5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SMCR5, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SMCR5 BINDING SITE, designated SEQ ID:10482, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37511] Another function of GAM1032 is therefore inhibition of Smith-magenis syndrome chromosome region, candidate 5 (SMCR5, Accession NP_658987.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SMCR5.

[37512] SORCS2 (Accession NP_065828.1) is another GAM1032 target gene, herein designated TARGET GENE. SORCS2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SORCS2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SORCS2 BINDING SITE, designated SEQ ID:6379, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37513] Another function of GAM1032 is therefore inhibition of SORCS2 (Accession NP_065828.1) . Accordingly, utilities

of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SORCS2.

[37514] Sp7 transcription factor (SP7, Accession NP_690599.1) is another GAM1032 target gene, herein designated TARGET GENE. SP7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SP7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SP7 BINDING SITE, designated SEQ ID:20063, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37515] Another function of GAM1032 is therefore inhibition of Sp7 transcription factor (SP7, Accession NP_690599.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SP7.

[37516] Spondin 1, (f-spondin) extracellular matrix protein (SPON1, Accession NP_006099.1) is another GAM1032 target gene, herein designated TARGET GENE. SPON1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by SPON1, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SPON1 BINDING SITE, designated SEQ ID:14025, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37517] Another function of GAM1032 is therefore inhibition of Spondin 1, (f-spondin) extracellular matrix protein (SPON1, Accession NP_006099.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with SPON1.

[37518] Sulfite oxidase (SUOX, Accession NP_000447.1) is another GAM1032 target gene, herein designated TARGET GENE. SUOX BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by SUOX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of SUOX BINDING SITE, designated SEQ ID:15310, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37519] Another function of GAM1032 is therefore inhibition of Sulfite oxidase (SUOX, Accession NP_000447.1), a gene

which sulfite oxidase deficiency and therefore is associated with Sulfite oxidase deficiency. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of Sulfite oxidase deficiency, and of other diseases and clinical conditions associated with SUOX.

[37520] The function of SUOX and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM206.1.Tachykinin receptor 3 (TACR3, Accession NP_001050.1) is another GAM1032 target gene, herein designated TARGET GENE. TACR3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TACR3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TACR3 BINDING SITE, designated SEQ ID:15957, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37521] Another function of GAM1032 is therefore inhibition of Tachykinin receptor 3 (TACR3, Accession NP_001050.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions

associated with TACR3.

[37522] T-box 18 (TBX18, Accession XP_291165.1) is another GAM1032 target gene, herein designated TARGET GENE. TBX18 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by TBX18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TBX18 BINDING SITE, designated SEQ ID:550, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37523] Another function of GAM1032 is therefore inhibition of T-box 18 (TBX18, Accession XP_291165.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TBX18.

[37524] Thymidine kinase 2, mitochondrial (TK2, Accession NP_004605.1) is another GAM1032 target gene, herein designated TARGET GENE. TK2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TK2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of TK2 BINDING SITE, designated SEQ ID:17771, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37525] Another function of GAM1032 is therefore inhibition of Thymidine kinase 2, mitochondrial (TK2, Accession NP_004605.1), a gene which phosphorylates thymidine, deoxycytidine, deoxyuridine, and also anti- viral and anti-cancer nucleoside analogs and therefore may be associated with Mitochondrial dna depletion myopathy. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of Mitochondrial dna depletion myopathy, and of other diseases and clinical conditions associated with TK2.

[37526] The function of TK2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.1.Toll-like receptor 4 (TLR4, Accession NP_612566.1) is another GAM1032 target gene, herein designated TARGET GENE. TLR4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TLR4, corresponding to a target binding site such as BINDING SITE I, BINDING

SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TLR4 BINDING SITE, designated SEQ ID:10745, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37527] Another function of GAM1032 is therefore inhibition of Toll-like receptor 4 (TLR4, Accession NP_612566.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TLR4.

[37528] Toll-like receptor 4 (TLR4, Accession NP_612564.1) is another GAM1032 target gene, herein designated TARGET GENE. TLR4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TLR4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TLR4 BINDING SITE, designated SEQ ID:10745, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37529] Another function of GAM1032 is therefore inhibition of Toll-like receptor 4 (TLR4, Accession NP_612564.1) . Ac-

cordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TLR4.

[37530] Toll-like receptor 4 (TLR4, Accession NP_003257.1) is another GAM1032 target gene, herein designated TARGET GENE. TLR4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TLR4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TLR4 BINDING SITE, designated SEQ ID:10745, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37531] Another function of GAM1032 is therefore inhibition of Toll-like receptor 4 (TLR4, Accession NP_003257.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TLR4.

[37532] Toll-like receptor 4 (TLR4, Accession NP_612567.1) is another GAM1032 target gene, herein designated TARGET GENE. TLR4 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of

mRNA encoded by TLR4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TLR4 BINDING SITE, designated SEQ ID:10745, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37533] Another function of GAM1032 is therefore inhibition of Toll-like receptor 4 (TLR4, Accession NP_612567.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TLR4.

[37534] Tumor necrosis factor receptor superfamily, member 6 (TNFRSF6, Accession NP_690616.1) is another GAM1032 target gene, herein designated TARGET GENE. TNFRSF6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF6 BINDING SITE, designated SEQ ID:3084, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ

ID:303.

[37535] Another function of GAM1032 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 6 (TNFRSF6, Accession NP_690616.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFRSF6.

[37536] Tumor necrosis factor receptor superfamily, member 6 (TNFRSF6, Accession NP_690612.1) is another GAM1032 target gene, herein designated TARGET GENE. TNFRSF6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF6 BINDING SITE, designated SEQ ID:3084, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37537] Another function of GAM1032 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 6 (TNFRSF6, Accession NP_690612.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with TNFRSF6.

[37538] Tumor necrosis factor receptor superfamily, member 6 (TNFRSF6, Accession NP_690615.1) is another GAM1032 target gene, herein designated TARGET GENE. TNFRSF6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF6 BINDING SITE, designated SEQ ID:3084, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37539] Another function of GAM1032 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 6 (TNFRSF6, Accession NP_690615.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFRSF6.

[37540] Tumor necrosis factor receptor superfamily, member 6 (TNFRSF6, Accession NP_690614.1) is another GAM1032 target gene, herein designated TARGET GENE. TNFRSF6

BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF6 BINDING SITE, designated SEQ ID:3084, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37541] Another function of GAM1032 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 6 (TNFRSF6, Accession NP_690614.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFRSF6.

[37542] Tumor necrosis factor receptor superfamily, member 6 (TNFRSF6, Accession NP_690611.1) is another GAM1032 target gene, herein designated TARGET GENE. TNFRSF6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of TNFRSF6 BINDING SITE, designated SEQ ID:3084, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37543] Another function of GAM1032 is therefore inhibition of Tumor necrosis factor receptor superfamily, member 6 (TNFRSF6, Accession NP_690611.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFRSF6.

[37544] Tumor necrosis factor receptor superfamily, member 6 (TNFRSF6, Accession NP_690613.1) is another GAM1032 target gene, herein designated TARGET GENE. TNFRSF6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by TNFRSF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TNFRSF6 BINDING SITE, designated SEQ ID:3084, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37545] Another function of GAM1032 is therefore inhibition of

Tumor necrosis factor receptor superfamily, member 6 (TNFRSF6, Accession NP_690613.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TNFRSF6.

[37546] TOLLIP (Accession NP_061882.2) is another GAM1032 target gene, herein designated TARGET GENE. TOLLIP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by TOLLIP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TOLLIP BINDING SITE, designated SEQ ID:13742, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37547] Another function of GAM1032 is therefore inhibition of TOLLIP (Accession NP_061882.2) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TOLLIP.

[37548] Tyrosinase-related protein 1 (TYRP1, Accession NP_000541.1) is another GAM1032 target gene, herein designated TARGET GENE. TYRP1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA

encoded by TYRP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of TYRP1 BINDING SITE, designated SEQ ID:11984, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37549] Another function of GAM1032 is therefore inhibition of Tyrosinase-related protein 1 (TYRP1, Accession NP_000541.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with TYRP1.

[37550] USP12L1 (Accession XP_167944.1) is another GAM1032 target gene, herein designated TARGET GENE. USP12L1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by USP12L1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of USP12L1 BINDING SITE, designated SEQ ID:8209, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37551] Another function of GAM1032 is therefore inhibition of

USP12L1 (Accession XP_167944.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with USP12L1.

[37552] VIPL (Accession NP_110432.1) is another GAM1032 target gene, herein designated TARGET GENE. VIPL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by VIPL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of VIPL BINDING SITE, designated SEQ ID:9897, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37553] Another function of GAM1032 is therefore inhibition of VIPL (Accession NP_110432.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with VIPL.

[37554] Ww domain binding protein 2 (WBP2, Accession NP_036610.2) is another GAM1032 target gene, herein designated TARGET GENE. WBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by WBP2, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of WBP2 BINDING SITE, designated SEQ ID:17972, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37555] Another function of GAM1032 is therefore inhibition of Ww domain binding protein 2 (WBP2, Accession NP_036610.2), a gene which binds with high affinity to the WW domain contained in YAP;. Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with WBP2.

[37556] The function of WBP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM342.2.ZAK (Accession NP_598407.1) is another GAM1032 target gene, herein designated TARGET GENE. ZAK BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ZAK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ZAK BINDING SITE, designated SEQ

ID:5951, to the nucleotide sequence of GAM1032 RNA, herein designated GAM RNA, also designated SEQ ID:303.

[37557] Another function of GAM1032 is therefore inhibition of ZAK (Accession NP_598407.1) . Accordingly, utilities of GAM1032 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ZAK.

[37558]

[37559] Fig. 8 further provides a conceptual description of a novel bioinformatically detected of the present invention, referred to here as Genomic Address Messenger 1338 (GAM1338), which modulates expression of respective target genes thereof, the function and utility of which target genes is known in the art.

[37560] GAM1338 is a novel bioinformatically detected regulatory, non protein coding, micro RNA (miRNA) gene. The method by which GAM1338 was detected is described hereinabove with reference to Figs. 8-15.

[37561] GAM1338 gene, herein designated GAM GENE, and GAM1338 target gene, herein designated TARGET GENE, are human genes contained in the human genome.

[37562] GAM1338 gene encodes a GAM1338 precursor RNA, herein designated GAM PRECURSOR RNA. Similar to other miRNA genes, and unlike most ordinary genes, GAM1338

precursor RNA does not encode a protein. A nucleotide sequence identical or highly similar to the nucleotide sequence of GAM1338 precursor RNA is designated SEQ ID:36, and is provided hereinbelow with reference to the sequence listing part.

[37563] GAM1338 precursor RNA folds onto itself, forming GAM1338 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial inversed-reversed sequence of the nucleotide sequence of the second half thereof.

[37564] GAM1338 precursor RNA folds onto itself, forming GAM1338 folded precursor RNA, herein designated GAM FOLDED PRECURSOR RNA, which has a two-dimensional `hairpin structure`. As is well known in the art, this `hairpin structure`, is typical of RNA encoded by miRNA genes, and is due to the fact that the nucleotide sequence of the first half of the RNA encoded by a miRNA gene is an accurate or partial reverse-complementary sequence of the nucleotide sequence of the second half thereof.

[37565] Nucleotide sequence of GAM1338 precursor RNA, designated SEQ-ID: 36, and a schematic representation of a predicted secondary folding of GAM1338 folded precursor RNA are further described with reference to Table 2, hereby incorporated by reference.

[37566] An enzyme complex designated DICER COMPLEX, `dices` the GAM1338 folded precursor RNA into GAM1338 RNA, herein designated GAM RNA, a single stranded ~22 nt long RNA segment. As is known in the art, `dicing` of a hairpin structured RNA precursor product into a short ~22nt RNA segment is catalyzed by an enzyme complex comprising an enzyme called Dicer together with other necessary proteins. A probable (GAM Prediction Accuracy Group: C) nucleotide sequence of GAM1338 RNA is designated SEQ ID:360, and is provided hereinbelow with references to the sequence listing part and Table 3, hereby incorporated by reference.

[37567] GAM1338 target gene, herein designated TARGET GENE, encodes a corresponding messenger RNA, GAM1338 target RNA, herein designated GAM TARGET RNA. GAM1338 target RNA comprises three regions, as is typical of mRNA of a protein coding gene: a 5` untranslated region, a protein coding region and a 3` untranslated region, desig-

nated 5`UTR, PROTEIN CODING and 3`UTR respectively.

[37568] GAM1338 RNA, herein designated GAM RNA, binds complementarily to one or more target binding sites located in untranslated regions of GAM1338 target RNA, herein designated GAM TARGET RNA. This complementary binding is due to the fact that the nucleotide sequence of GAM1338 RNA is an accurate or a partial inversed-reversed sequence of the nucleotide sequence of each of the target binding sites. As an illustration, Fig. 8 shows three such target binding sites, designated BINDING SITE I, BINDING SITE II and BINDING SITE III respectively. It is appreciated that the number of target binding sites shown in Fig. 8 is meant as an illustration only, and is not meant to be limiting GAM1338 RNA may have a different number of target binding sites in untranslated regions of a GAM1338 target RNA. It is further appreciated that while Fig. 8 depicts target binding sites in the 3`UTR region, this is meant as an example only these target binding sites may be located in the 3`UTR region, the 5`UTR region, or in both 3`UTR and 5`UTR regions.

[37569] The complementary binding of GAM1338 RNA, herein designated GAM RNA, to target binding sites on GAM1338 target RNA, herein designated GAM TARGET RNA, such as

BINDING SITE I, BINDING SITE II and BINDING SITE III, inhibits translation of GAM1338 target RNA into GAM1338 target protein, herein designated GAM TARGET PROTEIN. GAM target protein is therefore outlined by a broken line.

[37570] It is appreciated that GAM1338 target gene, herein designated TARGET GENE, in fact represents a plurality of GAM1338 target genes. The mRNA of each one of this plurality of GAM1338 target genes comprises one or more target binding sites, each having a nucleotide sequence which is at least partly complementary to GAM1338 RNA, herein designated GAM RNA, and which when bound by GAM1338 RNA causes inhibition of translation of respective one or more GAM1338 target proteins.

[37571] It is further appreciated by one skilled in the art that the mode of translational inhibition illustrated by Fig. 8 with specific reference to translational inhibition exerted by GAM1338 gene, herein designated GAM GENE, on one or more GAM1338 target genes, herein collectively designated TARGET GENE, is common to other known miRNA genes. As mentioned hereinabove with reference to the background section, although a specific complementary binding site has been demonstrated only for some of the known miRNA genes (primarily Lin-4 and Let-7), all other

recently discovered miRNA genes are also believed by those skilled in the art to modulate expression of other genes by complementary binding, although specific complementary binding sites of these other miRNA genes have not yet been found (Ruvkun G., Perspective: Glimpses of a tiny RNA world, Science 294,779 (2001)).

[37572] It is appreciated that specific functions and accordingly utilities of GAM1338 correlate with, and may be deduced from, the identity of the target genes which GAM1338 binds and inhibits, and the function of these target genes, as elaborated hereinbelow.

[37573]

[37574]

[37575] 15E1.2 (Accession XP_290596.1) is a GAM1338 target gene, herein designated TARGET GENE. 15E1.2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by 15E1.2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of 15E1.2 BINDING SITE, designated SEQ ID:13885, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA,

also designated SEQ ID:360.

[37576] A function of GAM1338 is therefore inhibition of 15E1.2 (Accession XP_290596.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with 15E1.2.

[37577] 7h3 (Accession NP_149014.2) is another GAM1338 target gene, herein designated TARGET GENE. 7h3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by 7h3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of 7h3 BINDING SITE, designated SEQ ID:16813, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37578] Another function of GAM1338 is therefore inhibition of 7h3 (Accession NP_149014.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with 7h3.

[37579] Alpha-1-b glycoprotein (A1BG, Accession NP_570602.2) is another GAM1338 target gene, herein designated TARGET GENE. A1BG BINDING SITE1 and A1BG BINDING SITE2 are target binding sites found in untranslated regions of

mRNA encoded by A1BG, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of A1BG BINDING SITE1 and A1BG BINDING SITE2, designated SEQ ID:10791 and SEQ ID:19693 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37580] Another function of GAM1338 is therefore inhibition of Alpha-1-b glycoprotein (A1BG, Accession NP_570602.2), a gene which a plasma protein of unknown function. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with A1BG.

[37581] The function of A1BG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.A2BP1 (Accession NP_061193.2) is another GAM1338 target gene, herein designated TARGET GENE. A2BP1 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by A2BP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of A2BP1 BINDING SITE, designated SEQ ID:1212, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37582] Another function of GAM1338 is therefore inhibition of A2BP1 (Accession NP_061193.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with A2BP1.

[37583] Aminoadipate-semialdehyde synthase (AASS, Accession NP_005754.2) is another GAM1338 target gene, herein designated TARGET GENE. AASS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AASS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AASS BINDING SITE, designated SEQ ID:18163, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37584] Another function of GAM1338 is therefore inhibition of Aminoadipate-semialdehyde synthase (AASS, Accession NP_005754.2) . Accordingly, utilities of GAM1338 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with AASS.

[37585] ABCA13 (Accession NP_689914.2) is another GAM1338 target gene, herein designated TARGET GENE. ABCA13 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ABCA13, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABCA13 BINDING SITE, designated SEQ ID:13800, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37586] Another function of GAM1338 is therefore inhibition of ABCA13 (Accession NP_689914.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABCA13.

[37587] Atp-binding cassette, sub-family c (cftr/mrp), member 11 (ABCC11, Accession NP_149163.2) is another GAM1338 target gene, herein designated TARGET GENE. ABCC11 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by ABCC11, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ABCC11 BINDING SITE, designated SEQ ID:18047, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37588] Another function of GAM1338 is therefore inhibition of Atp-binding cassette, sub-family c (cftr/mrp), member 11 (ABCC11, Accession NP_149163.2), a gene which acts as a multispecific organic anion pump which can transport nucleotide analogs (by similarity). Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ABCC11.

[37589] The function of ABCC11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Acyl-coenzyme a dehydrogenase, short/branched chain (ACADSB, Accession NP_001600.1) is another GAM1338 target gene, herein designated TARGET GENE. ACADSB BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ACADSB, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ACADSB BINDING SITE, designated SEQ ID:14907, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37590] Another function of GAM1338 is therefore inhibition of Acyl-coenzyme a dehydrogenase, short/branched chain (ACADSB, Accession NP_001600.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ACADSB.

[37591] AGO4 (Accession NP_060099.2) is another GAM1338 target gene, herein designated TARGET GENE. AGO4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AGO4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AGO4 BINDING SITE, designated SEQ ID:13702, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37592] Another function of GAM1338 is therefore inhibition of AGO4 (Accession NP_060099.2) . Accordingly, utilities of

GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AGO4.

[37593] Aryl hydrocarbon receptor (AHR, Accession NP_001612.1) is another GAM1338 target gene, herein designated TARGET GENE. AHR BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AHR, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AHR BINDING SITE, designated SEQ ID:9011, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37594] Another function of GAM1338 is therefore inhibition of Aryl hydrocarbon receptor (AHR, Accession NP_001612.1), a gene which plays a role in modulating carcinogenesis through the induction of xenobiotic- metabolizing enzymes and therefore may be associated with Stomach tumors. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Stomach tumors, and of other diseases and clinical conditions associated with AHR.

[37595] The function of AHR and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM30.1.Absent in melanoma 1 (AIM1, Accession XP_166300.1) is another GAM1338 target gene, herein designated TARGET GENE. AIM1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AIM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AIM1 BINDING SITE, designated SEQ ID:1383, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37596] Another function of GAM1338 is therefore inhibition of Absent in melanoma 1 (AIM1, Accession XP_166300.1), a gene which is altered in association with tumor suppression in a model of human melanoma and therefore may be associated with Malignant melanoma. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Malignant melanoma, and of other diseases and clinical conditions associated with AIM1.

[37597] The function of AIM1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM136.1.A kinase (prka) anchor protein 8 (AKAP8, Accession NP_005849.1) is another GAM1338 target gene, herein designated TARGET GENE. AKAP8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AKAP8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AKAP8 BINDING SITE, designated SEQ ID:2643, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37598] Another function of GAM1338 is therefore inhibition of A kinase (prka) anchor protein 8 (AKAP8, Accession NP_005849.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AKAP8.

[37599] Aldehyde dehydrogenase 1 family, member b1 (ALDH1B1, Accession NP_000683.3) is another GAM1338 target gene, herein designated TARGET GENE. ALDH1B1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ALDH1B1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the com-

plementarity of the nucleotide sequences of ALDH1B1 BINDING SITE, designated SEQ ID:19434, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37600] Another function of GAM1338 is therefore inhibition of Aldehyde dehydrogenase 1 family, member b1 (ALDH1B1, Accession NP_000683.3) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALDH1B1.

[37601] Arachidonate 15-lipoxygenase (ALOX15, Accession NP_001131.1) is another GAM1338 target gene, herein designated TARGET GENE. ALOX15 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ALOX15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ALOX15 BINDING SITE, designated SEQ ID:18901, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37602] Another function of GAM1338 is therefore inhibition of Arachidonate 15-lipoxygenase (ALOX15, Accession NP_001131.1), a gene which converts arachidonic acid to

15s- hydroperoxyeicosatetraenoic acid. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ALOX15.

[37603] The function of ALOX15 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.AMID (Accession NP_116186.1) is another GAM1338 target gene, herein designated TARGET GENE. AMID BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AMID, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AMID BINDING SITE, designated SEQ ID:2328, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37604] Another function of GAM1338 is therefore inhibition of AMID (Accession NP_116186.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AMID.

[37605] Ankyrin repeat domain 6 (ANKRD6, Accession NP_055757.1) is another GAM1338 target gene, herein

designated TARGET GENE. ANKRD6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ANKRD6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ANKRD6 BINDING SITE, designated SEQ ID:11653, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37606] Another function of GAM1338 is therefore inhibition of Ankyrin repeat domain 6 (ANKRD6, Accession NP_055757.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ANKRD6.

[37607] AP1S3 (Accession XP_291023.1) is another GAM1338 target gene, herein designated TARGET GENE. AP1S3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AP1S3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AP1S3 BINDING SITE, designated SEQ ID:15779, to the nucleotide sequence of GAM1338

RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37608] Another function of GAM1338 is therefore inhibition of AP1S3 (Accession XP_291023.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP1S3.

[37609] Adaptor-related protein complex 3, sigma 2 subunit (AP3S2, Accession NP_005820.1) is another GAM1338 target gene, herein designated TARGET GENE. AP3S2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by AP3S2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AP3S2 BINDING SITE, designated SEQ ID:6113, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37610] Another function of GAM1338 is therefore inhibition of Adaptor-related protein complex 3, sigma 2 subunit (AP3S2, Accession NP_005820.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AP3S2.

[37611] Apoptotic protease activating factor (APAF1, Accession

NP_001151.1) is another GAM1338 target gene, herein designated TARGET GENE. APAF1 BINDING SITE1 and APAF1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by APAF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APAF1 BINDING SITE1 and APAF1 BINDING SITE2, designated SEQ ID:803 and SEQ ID:803 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37612] Another function of GAM1338 is therefore inhibition of Apoptotic protease activating factor (APAF1, Accession NP_001151.1), a gene which functions in the mitochondrial apoptotic pathway that leads to caspase 9 dependent activation of caspase 3 and therefore may be associated with Cancer. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Cancer, and of other diseases and clinical conditions associated with APAF1.

[37613] The function of APAF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Apoptotic protease activating factor (APAF1,

Accession NP_001151.1) is another GAM1338 target gene, herein designated TARGET GENE. APAF1 BINDING SITE1 and APAF1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by APAF1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APAF1 BINDING SITE1 and APAF1 BINDING SITE2, designated SEQ ID:1306 and SEQ ID:1306 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37614] Another function of GAM1338 is therefore inhibition of Apoptotic protease activating factor (APAF1, Accession NP_001151.1), a gene which functions in the mitochondrial apoptotic pathway that leads to caspase 9 dependent activation of caspase 3 and therefore may be associated with Cancer. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Cancer, and of other diseases and clinical conditions associated with APAF1.

[37615] The function of APAF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM30.1.APM1 (Accession NP_004788.1) is another GAM1338 target gene, herein designated TARGET GENE. APM1 BINDING SITE1 through APM1 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by APM1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APM1 BINDING SITE1 through APM1 BINDING SITE3, designated SEQ ID:13551, SEQ ID:1962 and SEQ ID:2268 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37616] Another function of GAM1338 is therefore inhibition of APM1 (Accession NP_004788.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APM1.

[37617] Apolipoprotein l, 2 (APOL2, Accession NP_112092.1) is another GAM1338 target gene, herein designated TARGET GENE. APOL2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APOL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementar-

ity of the nucleotide sequences of APOL2 BINDING SITE, designated SEQ ID:16087, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37618] Another function of GAM1338 is therefore inhibition of Apolipoprotein l, 2 (APOL2, Accession NP_112092.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APOL2.

[37619] Apolipoprotein l, 2 (APOL2, Accession NP_663612.1) is another GAM1338 target gene, herein designated TARGET GENE. APOL2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by APOL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APOL2 BINDING SITE, designated SEQ ID:16087, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37620] Another function of GAM1338 is therefore inhibition of Apolipoprotein l, 2 (APOL2, Accession NP_663612.1) . Accordingly, utilities of GAM1338 include diagnosis, preven-

tion and treatment of diseases and clinical conditions associated with APOL2.

[37621] Amyloid beta precursor protein (cytoplasmic tail) binding protein 2 (APPBP2, Accession NP_006371.2) is another GAM1338 target gene, herein designated TARGET GENE. APPBP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPBP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APPBP2 BINDING SITE, designated SEQ ID:20094, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37622] Another function of GAM1338 is therefore inhibition of Amyloid beta precursor protein (cytoplasmic tail) binding protein 2 (APPBP2, Accession NP_006371.2), a gene which interacts with the basolateral sorting signal of amyloid precursor protein. and therefore may be associated with Alzheimer's disease. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Alzheimer's disease, and of other diseases and clinical conditions associated with APPBP2.

[37623] The function of APPBP2 and its association with various

diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.APPL (Accession NP_036228.1) is another GAM1338 target gene, herein designated TARGET GENE. APPL BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by APPL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of APPL BINDING SITE, designated SEQ ID:12386, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37624] Another function of GAM1338 is therefore inhibition of APPL (Accession NP_036228.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with APPL.

[37625] Aquaporin 6, kidney specific (AQP6, Accession NP_445738.1) is another GAM1338 target gene, herein designated TARGET GENE. AQP6 BINDING SITE1 and AQP6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by AQP6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AQP6 BINDING SITE1 and AQP6 BINDING SITE2, designated SEQ ID:16104 and SEQ ID:2103 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37626] Another function of GAM1338 is therefore inhibition of Aquaporin 6, kidney specific (AQP6, Accession NP_445738.1), a gene which participates in distinct physiologic function such as glomerular filtration, tubular endocytosis, and acid- base metabolism. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AQP6.

[37627] The function of AQP6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM51.1.Aquaporin 6, kidney specific (AQP6, Accession NP_001643.1) is another GAM1338 target gene, herein designated TARGET GENE. AQP6 BINDING SITE1 and AQP6 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by AQP6, corresponding to target binding sites

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AQP6 BINDING SITE1 and AQP6 BINDING SITE2, designated SEQ ID:2103 and SEQ ID:13404 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37628] Another function of GAM1338 is therefore inhibition of Aquaporin 6, kidney specific (AQP6, Accession NP_001643.1), a gene which participates in distinct physiologic function such as glomerular filtration, tubular endocytosis, and acid- base metabolism. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AQP6.

[37629] The function of AQP6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM51.1.Ras homolog gene family, member f (in filopodia) (ARHF, Accession NP_061907.1) is another GAM1338 target gene, herein designated TARGET GENE. ARHF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHF, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHF BINDING SITE, designated SEQ ID:3172, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37630] Another function of GAM1338 is therefore inhibition of Ras homolog gene family, member f (in filopodia) (ARHF, Accession NP_061907.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHF.

[37631] Rho gtpase activating protein 1 (ARHGAP1, Accession NP_004299.1) is another GAM1338 target gene, herein designated TARGET GENE. ARHGAP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHGAP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHGAP1 BINDING SITE, designated SEQ ID:8690, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37632] Another function of GAM1338 is therefore inhibition of

Rho gtpase activating protein 1 (ARHGAP1, Accession NP_004299.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHGAP1.

[37633] ARHGAP11A (Accession NP_055598.1) is another GAM1338 target gene, herein designated TARGET GENE. ARHGAP11A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ARHGAP11A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARHGAP11A BINDING SITE, designated SEQ ID:7085, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37634] Another function of GAM1338 is therefore inhibition of ARHGAP11A (Accession NP_055598.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARHGAP11A.

[37635] ARPP-19 (Accession NP_006619.1) is another GAM1338 target gene, herein designated TARGET GENE. ARPP-19 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by ARPP-19, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ARPP-19 BINDING SITE, designated SEQ ID:18664, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37636] Another function of GAM1338 is therefore inhibition of ARPP-19 (Accession NP_006619.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ARPP-19.

[37637] Ankyrin repeat and socs box-containing 16 (ASB16, Accession NP_543139.4) is another GAM1338 target gene, herein designated TARGET GENE. ASB16 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ASB16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASB16 BINDING SITE, designated SEQ ID:11661, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37638] Another function of GAM1338 is therefore inhibition of Ankyrin repeat and socs box-containing 16 (ASB16, Accession NP_543139.4) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASB16.

[37639] Ankyrin repeat and socs box-containing 6 (ASB6, Accession NP_821066.1) is another GAM1338 target gene, herein designated TARGET GENE. ASB6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ASB6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASB6 BINDING SITE, designated SEQ ID:1654, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37640] Another function of GAM1338 is therefore inhibition of Ankyrin repeat and socs box-containing 6 (ASB6, Accession NP_821066.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASB6.

[37641] Ankyrin repeat and socs box-containing 6 (ASB6, Accession NP_060343.1) is another GAM1338 target gene,

herein designated TARGET GENE. ASB6 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ASB6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASB6 BINDING SITE, designated SEQ ID:1654, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37642] Another function of GAM1338 is therefore inhibition of Ankyrin repeat and socs box-containing 6 (ASB6, Accession NP_060343.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASB6.

[37643] ASE-1 (Accession NP_036231.1) is another GAM1338 target gene, herein designated TARGET GENE. ASE-1 BINDING SITE1 and ASE-1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by ASE-1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ASE-1 BINDING SITE1 and ASE-1 BINDING SITE2, designated SEQ ID:9988 and SEQ ID:9101

respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37644] Another function of GAM1338 is therefore inhibition of ASE-1 (Accession NP_036231.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ASE-1.

[37645] ATF7IP2 (Accession NP_079273.1) is another GAM1338 target gene, herein designated TARGET GENE. ATF7IP2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATF7IP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATF7IP2 BINDING SITE, designated SEQ ID:12397, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37646] Another function of GAM1338 is therefore inhibition of ATF7IP2 (Accession NP_079273.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATF7IP2.

[37647] Ataxia telangiectasia mutated (includes complementation

groups a, c and d) (ATM, Accession NP_612150.1) is another GAM1338 target gene, herein designated TARGET GENE. ATM BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ATM, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATM BINDING SITE, designated SEQ ID:5585, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37648] Another function of GAM1338 is therefore inhibition of Ataxia telangiectasia mutated (includes complementation groups a, c and d) (ATM, Accession NP_612150.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATM.

[37649] Atpase, na+/k+ transporting, beta 2 polypeptide (ATP1B2, Accession NP_001669.1) is another GAM1338 target gene, herein designated TARGET GENE. ATP1B2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATP1B2, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP1B2 BINDING SITE, designated SEQ ID:19749, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37650] Another function of GAM1338 is therefore inhibition of Atpase, na+/k+ transporting, beta 2 polypeptide (ATP1B2, Accession NP_001669.1), a gene which catalyzes the hydrolysis of ATP coupled with the exchange of Na +/K+ ions across the plasma membrane. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP1B2.

[37651] The function of ATP1B2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Atpase, (na+)/k+ transporting, beta 4 polypeptide (ATP1B4, Accession NP_036201.1) is another GAM1338 target gene, herein designated TARGET GENE. ATP1B4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATP1B4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 il-

lustrates the complementarity of the nucleotide sequences of ATP1B4 BINDING SITE, designated SEQ ID:15678, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37652] Another function of GAM1338 is therefore inhibition of Atpase, (na+)/k+ transporting, beta 4 polypeptide (ATP1B4, Accession NP_036201.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP1B4.

[37653] ATP6V1A (Accession NP_001681.2) is another GAM1338 target gene, herein designated TARGET GENE. ATP6V1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATP6V1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP6V1A BINDING SITE, designated SEQ ID:19693, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37654] Another function of GAM1338 is therefore inhibition of ATP6V1A (Accession NP_001681.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with ATP6V1A.

[37655] Atpase, cu++ transporting, alpha polypeptide (menkes syndrome) (ATP7A, Accession NP_000043.1) is another GAM1338 target gene, herein designated TARGET GENE. ATP7A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ATP7A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ATP7A BINDING SITE, designated SEQ ID:19505, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37656] Another function of GAM1338 is therefore inhibition of Atpase, cu++ transporting, alpha polypeptide (menkes syndrome) (ATP7A, Accession NP_000043.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ATP7A.

[37657] Axl receptor tyrosine kinase (AXL, Accession NP_068713.2) is another GAM1338 target gene, herein designated TARGET GENE. AXL BINDING SITE is a target binding site found in the 3` untranslated region of multi-

ple transcripts of mRNA encoded by AXL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AXL BINDING SITE, designated SEQ ID:5485, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37658] Another function of GAM1338 is therefore inhibition of Axl receptor tyrosine kinase (AXL, Accession NP_068713.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AXL.

[37659] Axl receptor tyrosine kinase (AXL, Accession NP_001690.2) is another GAM1338 target gene, herein designated TARGET GENE. AXL BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by AXL, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of AXL BINDING SITE, designated SEQ ID:5485, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37660] Another function of GAM1338 is therefore inhibition of Axl receptor tyrosine kinase (AXL, Accession NP_001690.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with AXL.

[37661] BA108L7.2 (Accession NP_112233.2) is another GAM1338 target gene, herein designated TARGET GENE. BA108L7.2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BA108L7.2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BA108L7.2 BINDING SITE, designated SEQ ID:4652, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37662] Another function of GAM1338 is therefore inhibition of BA108L7.2 (Accession NP_112233.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BA108L7.2.

[37663] Bcl2-associated athanogene 5 (BAG5, Accession NP_004864.1) is another GAM1338 target gene, herein designated TARGET GENE. BAG5 BINDING SITE is a target

binding site found in the 3` untranslated region of mRNA encoded by BAG5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BAG5 BINDING SITE, designated SEQ ID:19878, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37664] Another function of GAM1338 is therefore inhibition of Bcl2-associated athanogene 5 (BAG5, Accession NP_004864.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BAG5.

[37665] Bromodomain adjacent to zinc finger domain, 2a (BAZ2A, Accession NP_038477.1) is another GAM1338 target gene, herein designated TARGET GENE. BAZ2A BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BAZ2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BAZ2A BINDING SITE, designated SEQ ID:16740, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:360.

[37666] Another function of GAM1338 is therefore inhibition of Bromodomain adjacent to zinc finger domain, 2a (BAZ2A, Accession NP_038477.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BAZ2A.

[37667] B-cell cll/lymphoma 10 (BCL10, Accession NP_003912.1) is another GAM1338 target gene, herein designated TARGET GENE. BCL10 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BCL10, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BCL10 BINDING SITE, designated SEQ ID:17565, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37668] Another function of GAM1338 is therefore inhibition of B-cell cll/lymphoma 10 (BCL10, Accession NP_003912.1), a gene which is a positive regulator of lymphocyte proliferation, NF- kappaB activator. and therefore may be associated with Malt lymphoma, follicular lymphoma. Accordingly, utilities of GAM1338 include diagnosis, prevention

and treatment of Malt lymphoma, follicular lymphoma, and of other diseases and clinical conditions associated with BCL10.

[37669] The function of BCL10 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Bradykinin receptor b1 (BDKRB1, Accession NP_000701.2) is another GAM1338 target gene, herein designated TARGET GENE. BDKRB1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BDKRB1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BDKRB1 BINDING SITE, designated SEQ ID:13940, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37670] Another function of GAM1338 is therefore inhibition of Bradykinin receptor b1 (BDKRB1, Accession NP_000701.2), a gene which mediates intracellular calcium flux. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BDKRB1.

[37671] The function of BDKRB1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.B double prime 1, subunit of rna polymerase iii transcription initiation factor iiib (BDP1, Accession NP_060899.1) is another GAM1338 target gene, herein designated TARGET GENE. BDP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BDP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BDP1 BINDING SITE, designated SEQ ID:4304, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37672] Another function of GAM1338 is therefore inhibition of B double prime 1, subunit of rna polymerase iii transcription initiation factor iiib (BDP1, Accession NP_060899.1), a gene which activates RNA polymerase III transcription. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BDP1.

[37673] The function of BDP1 and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM146.1.BENE (Accession NP_005425.1) is another GAM1338 target gene, herein designated TARGET GENE. BENE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BENE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BENE BINDING SITE, designated SEQ ID:3688, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37674] Another function of GAM1338 is therefore inhibition of BENE (Accession NP_005425.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BENE.

[37675] BHD (Accession NP_659434.2) is another GAM1338 target gene, herein designated TARGET GENE. BHD BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BHD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of BHD BINDING SITE, designated SEQ ID:13142, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37676] Another function of GAM1338 is therefore inhibition of BHD (Accession NP_659434.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BHD.

[37677] BNIP-S (Accession NP_612122.1) is another GAM1338 target gene, herein designated TARGET GENE. BNIP-S BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by BNIP-S, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BNIP-S BINDING SITE, designated SEQ ID:17763, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37678] Another function of GAM1338 is therefore inhibition of BNIP-S (Accession NP_612122.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BNIP-S.

[37679] BRIP1 (Accession NP_114432.1) is another GAM1338 tar-

get gene, herein designated TARGET GENE. BRIP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BRIP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BRIP1 BINDING SITE, designated SEQ ID:721, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37680] Another function of GAM1338 is therefore inhibition of BRIP1 (Accession NP_114432.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BRIP1.

[37681] Butyrophilin, subfamily 3, member a1 (BTN3A1, Accession NP_008979.2) is another GAM1338 target gene, herein designated TARGET GENE. BTN3A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by BTN3A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BTN3A1 BINDING SITE, designated SEQ ID:17858, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA,

also designated SEQ ID:360.

[37682] Another function of GAM1338 is therefore inhibition of Butyrophilin, subfamily 3, member a1 (BTN3A1, Accession NP_008979.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BTN3A1.

[37683] BXDC1 (Accession XP_166303.1) is another GAM1338 target gene, herein designated TARGET GENE. BXDC1 BINDING SITE1 and BXDC1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by BXDC1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BXDC1 BINDING SITE1 and BXDC1 BINDING SITE2, designated SEQ ID:711 and SEQ ID:7070 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37684] Another function of GAM1338 is therefore inhibition of BXDC1 (Accession XP_166303.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BXDC1.

[37685] BY55 (Accession NP_008984.1) is another GAM1338 tar-

get gene, herein designated TARGET GENE. BY55 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by BY55, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of BY55 BINDING SITE, designated SEQ ID:17712, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37686] Another function of GAM1338 is therefore inhibition of BY55 (Accession NP_008984.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with BY55.

[37687] Chromosome 11 open reading frame 17 (C11orf17, Accession NP_065693.2) is another GAM1338 target gene, herein designated TARGET GENE. C11orf17 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C11orf17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C11orf17 BINDING SITE, designated SEQ ID:13793, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA,

also designated SEQ ID:360.

[37688] Another function of GAM1338 is therefore inhibition of Chromosome 11 open reading frame 17 (C11orf17, Accession NP_065693.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C11orf17.

[37689] Chromosome 13 open reading frame 1 (C13orf1, Accession NP_065189.1) is another GAM1338 target gene, herein designated TARGET GENE. C13orf1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C13orf1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C13orf1 BINDING SITE, designated SEQ ID:2596, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37690] Another function of GAM1338 is therefore inhibition of Chromosome 13 open reading frame 1 (C13orf1, Accession NP_065189.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C13orf1.

[37691] C14orf113 (Accession NP_060100.1) is another GAM1338

target gene, herein designated TARGET GENE. C14orf113 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C14orf113, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf113 BINDING SITE, designated SEQ ID:19688, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37692] Another function of GAM1338 is therefore inhibition of C14orf113 (Accession NP_060100.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf113.

[37693] C14orf143 (Accession NP_660274.1) is another GAM1338 target gene, herein designated TARGET GENE. C14orf143 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C14orf143, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf143 BINDING SITE, designated SEQ ID:11599, to the nucleotide sequence of GAM1338 RNA, herein designated

GAM RNA, also designated SEQ ID:360.

[37694] Another function of GAM1338 is therefore inhibition of C14orf143 (Accession NP_660274.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf143.

[37695] C14orf92 (Accession NP_055643.1) is another GAM1338 target gene, herein designated TARGET GENE. C14orf92 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C14orf92, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C14orf92 BINDING SITE, designated SEQ ID:18182, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37696] Another function of GAM1338 is therefore inhibition of C14orf92 (Accession NP_055643.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C14orf92.

[37697] Chromosome 1 open reading frame 24 (C1orf24, Accession NP_443198.1) is another GAM1338 target gene,

herein designated TARGET GENE. C1orf24 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by C1orf24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1orf24 BINDING SITE, designated SEQ ID:601, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37698] Another function of GAM1338 is therefore inhibition of Chromosome 1 open reading frame 24 (C1orf24, Accession NP_443198.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1orf24.

[37699] C1q and tumor necrosis factor related protein 6 (C1QTNF6, Accession NP_114116.2) is another GAM1338 target gene, herein designated TARGET GENE. C1QTNF6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C1QTNF6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C1QTNF6 BINDING SITE, designated SEQ ID:18746, to the

nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37700] Another function of GAM1338 is therefore inhibition of C1q and tumor necrosis factor related protein 6 (C1QTNF6, Accession NP_114116.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C1QTNF6.

[37701] Chromosome 20 open reading frame 129 (C20orf129, Accession NP_112181.1) is another GAM1338 target gene, herein designated TARGET GENE. C20orf129 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C20orf129, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C20orf129 BINDING SITE, designated SEQ ID:13924, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37702] Another function of GAM1338 is therefore inhibition of Chromosome 20 open reading frame 129 (C20orf129, Accession NP_112181.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases

and clinical conditions associated with C20orf129.

[37703] Chromosome 22 open reading frame 19 (C22orf19, Accession NP_003669.2) is another GAM1338 target gene, herein designated TARGET GENE. C22orf19 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C22orf19, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C22orf19 BINDING SITE, designated SEQ ID:14748, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37704] Another function of GAM1338 is therefore inhibition of Chromosome 22 open reading frame 19 (C22orf19, Accession NP_003669.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C22orf19.

[37705] C4orf9 (Accession XP_035572.1) is another GAM1338 target gene, herein designated TARGET GENE. C4orf9 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C4orf9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the

complementarity of the nucleotide sequences of C4orf9 BINDING SITE, designated SEQ ID:13142, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37706] Another function of GAM1338 is therefore inhibition of C4orf9 (Accession XP_035572.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C4orf9.

[37707] Chromosome 6 open reading frame 33 (C6orf33, Accession NP_588608.1) is another GAM1338 target gene, herein designated TARGET GENE. C6orf33 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C6orf33, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf33 BINDING SITE, designated SEQ ID:7278, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37708] Another function of GAM1338 is therefore inhibition of Chromosome 6 open reading frame 33 (C6orf33, Accession NP_588608.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and

clinical conditions associated with C6orf33.

[37709] C6orf5 (Accession NP_056339.2) is another GAM1338 target gene, herein designated TARGET GENE. C6orf5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C6orf5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf5 BINDING SITE, designated SEQ ID:10778, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37710] Another function of GAM1338 is therefore inhibition of C6orf5 (Accession NP_056339.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf5.

[37711] C6orf57 (Accession NP_660310.1) is another GAM1338 target gene, herein designated TARGET GENE. C6orf57 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C6orf57, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C6orf57 BINDING SITE, designated SEQ ID:6442, to the

nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37712] Another function of GAM1338 is therefore inhibition of C6orf57 (Accession NP_660310.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C6orf57.

[37713] Complement component 7 (C7, Accession NP_000578.1) is another GAM1338 target gene, herein designated TARGET GENE. C7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C7 BINDING SITE, designated SEQ ID:11697, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37714] Another function of GAM1338 is therefore inhibition of Complement component 7 (C7, Accession NP_000578.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C7.

[37715] Chromosome 9 open reading frame 5 (C9orf5, Accession

NP_114401.1) is another GAM1338 target gene, herein designated TARGET GENE. C9orf5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by C9orf5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of C9orf5 BINDING SITE, designated SEQ ID:15709, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37716] Another function of GAM1338 is therefore inhibition of Chromosome 9 open reading frame 5 (C9orf5, Accession NP_114401.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C9orf5.

[37717] Chromosome 9 open reading frame 9 (C9orf9, Accession NP_061829.2) is another GAM1338 target gene, herein designated TARGET GENE. C9orf9 BINDING SITE1 and C9orf9 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by C9orf9, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

C9orf9 BINDING SITE1 and C9orf9 BINDING SITE2, designated SEQ ID:19273 and SEQ ID:13797 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37718] Another function of GAM1338 is therefore inhibition of Chromosome 9 open reading frame 9 (C9orf9, Accession NP_061829.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with C9orf9.

[37719] Calcium modulating ligand (CAMLG, Accession NP_001736.1) is another GAM1338 target gene, herein designated TARGET GENE. CAMLG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAMLG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAMLG BINDING SITE, designated SEQ ID:9364, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37720] Another function of GAM1338 is therefore inhibition of Calcium modulating ligand (CAMLG, Accession NP_001736.1), a gene which is likely involved in the mo-

bilization of calcium as a result of the tcr/cd3 complex interaction. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAMLG.

[37721] The function of CAMLG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.CAPRI (Accession NP_008920.3) is another GAM1338 target gene, herein designated TARGET GENE. CAPRI BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CAPRI, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CAPRI BINDING SITE, designated SEQ ID:12829, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37722] Another function of GAM1338 is therefore inhibition of CAPRI (Accession NP_008920.3) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CAPRI.

[37723] Caspase recruitment domain family, member 6 (CARD6, Accession NP_115976.2) is another GAM1338 target gene,

herein designated TARGET GENE. CARD6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CARD6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CARD6 BINDING SITE, designated SEQ ID:13142, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37724] Another function of GAM1338 is therefore inhibition of Caspase recruitment domain family, member 6 (CARD6, Accession NP_115976.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CARD6.

[37725] Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_116766.1) is another GAM1338 target gene, herein designated TARGET GENE. CASP2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP2 BINDING SITE, designated SEQ ID:18463, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37726] Another function of GAM1338 is therefore inhibition of Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_116766.1), a gene which involves in the activation cascade of caspases responsible

for apoptosis execution. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CASP2.

[37727] The function of CASP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1.Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_116764.1) is another GAM1338 target gene, herein designated TARGET GENE. CASP2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP2 BINDING SITE, designated SEQ ID:18463, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37728] Another function of GAM1338 is therefore inhibition of Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_116764.1), a gene which

involves in the activation cascade of caspases responsible for apoptosis execution. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CASP2.

[37729] The function of CASP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1.Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_116765.1) is another GAM1338 target gene, herein designated TARGET GENE. CASP2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP2 BINDING SITE, designated SEQ ID:18463, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37730] Another function of GAM1338 is therefore inhibition of Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-reg-

ulated 2) (CASP2, Accession NP_116765.1), a gene which involves in the activation cascade of caspases responsible for apoptosis execution. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CASP2.

[37731] The function of CASP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1.Caspase 2, apoptosis-related cysteine protease (neural precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_001215.1) is another GAM1338 target gene, herein designated TARGET GENE. CASP2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP2 BINDING SITE, designated SEQ ID:18463, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37732] Another function of GAM1338 is therefore inhibition of Caspase 2, apoptosis-related cysteine protease (neural

precursor cell expressed, developmentally down-regulated 2) (CASP2, Accession NP_001215.1), a gene which involves in the activation cascade of caspases responsible for apoptosis execution. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CASP2.

[37733] The function of CASP2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM139.1.Caspase 8, apoptosis-related cysteine protease (CASP8, Accession NP_001219.2) is another GAM1338 target gene, herein designated TARGET GENE. CASP8 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP8 BINDING SITE, designated SEQ ID:9100, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37734] Another function of GAM1338 is therefore inhibition of Caspase 8, apoptosis-related cysteine protease (CASP8,

Accession NP_001219.2), a gene which is an apoptosis-related caspase and an upstream component of Fas receptor and tumor necrosis factor (TNF) receptor- induced apoptosis. and therefore may be associated with Huntington- related neurodegenerative diseases. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Huntington- related neurodegenerative diseases, and of other diseases and clinical conditions associated with CASP8.

[37735] The function of CASP8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Caspase 8, apoptosis-related cysteine protease (CASP8, Accession NP_203520.1) is another GAM1338 target gene, herein designated TARGET GENE. CASP8 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP8 BINDING SITE, designated SEQ ID:9100, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ

ID:360.

[37736] Another function of GAM1338 is therefore inhibition of Caspase 8, apoptosis-related cysteine protease (CASP8, Accession NP_203520.1), a gene which is an apoptosis-related caspase and an upstream component of Fas receptor and tumor necrosis factor (TNF) receptor- induced apoptosis. and therefore may be associated with Huntington- related neurodegenerative diseases. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Huntington- related neurodegenerative diseases, and of other diseases and clinical conditions associated with CASP8.

[37737] The function of CASP8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Caspase 8, apoptosis-related cysteine protease (CASP8, Accession NP_203521.1) is another GAM1338 target gene, herein designated TARGET GENE. CASP8 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CASP8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of CASP8 BINDING SITE, designated SEQ ID:9100, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37738] Another function of GAM1338 is therefore inhibition of Caspase 8, apoptosis-related cysteine protease (CASP8, Accession NP_203521.1), a gene which is an apoptosis-related caspase and an upstream component of Fas receptor and tumor necrosis factor (TNF) receptor- induced apoptosis. and therefore may be associated with Huntington- related neurodegenerative diseases. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Huntington- related neurodegenerative diseases, and of other diseases and clinical conditions associated with CASP8.

[37739] The function of CASP8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Caspase 8, apoptosis-related cysteine protease (CASP8, Accession NP_203519.1) is another GAM1338 target gene, herein designated TARGET GENE. CASP8 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA

encoded by CASP8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CASP8 BINDING SITE, designated SEQ ID:9100, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37740] Another function of GAM1338 is therefore inhibition of Caspase 8, apoptosis-related cysteine protease (CASP8, Accession NP_203519.1), a gene which is an apoptosis-related caspase and an upstream component of Fas receptor and tumor necrosis factor (TNF) receptor- induced apoptosis. and therefore may be associated with Huntington- related neurodegenerative diseases. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Huntington- related neurodegenerative diseases, and of other diseases and clinical conditions associated with CASP8.

[37741] The function of CASP8 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Core-binding factor, runt domain, alpha subunit 2; translocated to, 2 (CBFA2T2, Accession

NP_787060.1) is another GAM1338 target gene, herein designated TARGET GENE. CBFA2T2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CBFA2T2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CBFA2T2 BINDING SITE, designated SEQ ID:3868, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37742] Another function of GAM1338 is therefore inhibition of Core-binding factor, runt domain, alpha subunit 2; translocated to, 2 (CBFA2T2, Accession NP_787060.1), a gene which is a putative transcription factor. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CBFA2T2.

[37743] The function of CBFA2T2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.1.Core-binding factor, runt domain, alpha subunit 2; translocated to, 2 (CBFA2T2, Accession NP_005084.1) is another GAM1338 target gene, herein

designated TARGET GENE. CBFA2T2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CBFA2T2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CBFA2T2 BINDING SITE, designated SEQ ID:3868, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37744] Another function of GAM1338 is therefore inhibition of Core-binding factor, runt domain, alpha subunit 2; translocated to, 2 (CBFA2T2, Accession NP_005084.1), a gene which is a putative transcription factor. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CBFA2T2.

[37745] The function of CBFA2T2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM55.1.Chemokine (c-c motif) ligand 16 (CCL16, Accession NP_004581.1) is another GAM1338 target gene, herein designated TARGET GENE. CCL16 BINDING SITE is a target binding site found in the 3` untranslated region of

mRNA encoded by CCL16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCL16 BINDING SITE, designated SEQ ID:10633, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37746] Another function of GAM1338 is therefore inhibition of Chemokine (c-c motif) ligand 16 (CCL16, Accession NP_004581.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCL16.

[37747] Chemokine (c-c motif) ligand 22 (CCL22, Accession NP_002981.2) is another GAM1338 target gene, herein designated TARGET GENE. CCL22 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CCL22, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCL22 BINDING SITE, designated SEQ ID:11649, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37748] Another function of GAM1338 is therefore inhibition of Chemokine (c-c motif) ligand 22 (CCL22, Accession NP_002981.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCL22.

[37749] Cyclin f (CCNF, Accession NP_001752.1) is another GAM1338 target gene, herein designated TARGET GENE. CCNF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CCNF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCNF BINDING SITE, designated SEQ ID:14395, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37750] Another function of GAM1338 is therefore inhibition of Cyclin f (CCNF, Accession NP_001752.1), a gene which likely to be involved in the control of the cell cycle during s phase and g2. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCNF.

[37751] The function of CCNF and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM130.1.Ccr4 carbon catabolite repression 4-like (s. cerevisiae) (CCRN4L, Accession NP_036250.2) is another GAM1338 target gene, herein designated TARGET GENE. CCRN4L BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CCRN4L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CCRN4L BINDING SITE, designated SEQ ID:15829, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37752] Another function of GAM1338 is therefore inhibition of Ccr4 carbon catabolite repression 4-like (s. cerevisiae) (CCRN4L, Accession NP_036250.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CCRN4L.

[37753] Cd209 antigen (CD209, Accession NP_066978.1) is another GAM1338 target gene, herein designated TARGET GENE. CD209 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CD209, corresponding to a target binding site such as

BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CD209 BINDING SITE, designated SEQ ID:8229, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37754] Another function of GAM1338 is therefore inhibition of Cd209 antigen (CD209, Accession NP_066978.1), a gene which may play an important role in the CD4- independent association of HIV with cells. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CD209.

[37755] The function of CD209 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM96.1.Cd24 antigen (small cell lung carcinoma cluster 4 antigen) (CD24, Accession NP_037362.1) is another GAM1338 target gene, herein designated TARGET GENE. CD24 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CD24, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

CD24 BINDING SITE, designated SEQ ID:18593, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37756] Another function of GAM1338 is therefore inhibition of Cd24 antigen (small cell lung carcinoma cluster 4 antigen) (CD24, Accession NP_037362.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CD24.

[37757] Cdc14 cell division cycle 14 homolog b (s. cerevisiae) (CDC14B, Accession NP_201589.1) is another GAM1338 target gene, herein designated TARGET GENE. CDC14B BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CDC14B, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDC14B BINDING SITE, designated SEQ ID:7919, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37758] Another function of GAM1338 is therefore inhibition of Cdc14 cell division cycle 14 homolog b (s. cerevisiae) (CDC14B, Accession NP_201589.1) . Accordingly, utilities

of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDC14B.

[37759] Cdc6 cell division cycle 6 homolog (s. cerevisiae) (CDC6, Accession NP_001245.1) is another GAM1338 target gene, herein designated TARGET GENE. CDC6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CDC6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDC6 BINDING SITE, designated SEQ ID:7495, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37760] Another function of GAM1338 is therefore inhibition of Cdc6 cell division cycle 6 homolog (s. cerevisiae) (CDC6, Accession NP_001245.1), a gene which is a component of the origin recognition complex (orc) that binds origins of replication. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDC6.

[37761] The function of CDC6 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM189.1.CDCP1 (Accession NP_073753.3) is another GAM1338 target gene, herein designated TARGET GENE. CDCP1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CDCP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDCP1 BINDING SITE, designated SEQ ID:20095, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37762] Another function of GAM1338 is therefore inhibition of CDCP1 (Accession NP_073753.3) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDCP1.

[37763] Cadherin 1, type 1, e-cadherin (epithelial) (CDH1, Accession NP_004351.1) is another GAM1338 target gene, herein designated TARGET GENE. CDH1 BINDING SITE1 and CDH1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CDH1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of CDH1 BINDING SITE1 and CDH1 BINDING SITE2, designated SEQ ID:3667 and SEQ ID:5919 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37764] Another function of GAM1338 is therefore inhibition of Cadherin 1, type 1, e-cadherin (epithelial) (CDH1, Accession NP_004351.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDH1.

[37765] Cadherin 17, li cadherin (liver-intestine) (CDH17, Accession NP_004054.2) is another GAM1338 target gene, herein designated TARGET GENE. CDH17 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CDH17, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDH17 BINDING SITE, designated SEQ ID:5407, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37766] Another function of GAM1338 is therefore inhibition of Cadherin 17, li cadherin (liver-intestine) (CDH17, Acces-

sion NP_004054.2), a gene which may have a role in the morphological organization of liver and intestine and involved in intestinal peptide transport. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDH17.

[37767] The function of CDH17 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM161.1.CDK11 (Accession XP_166324.1) is another GAM1338 target gene, herein designated TARGET GENE. CDK11 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CDK11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDK11 BINDING SITE, designated SEQ ID:5408, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37768] Another function of GAM1338 is therefore inhibition of CDK11 (Accession XP_166324.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDK11.

[37769] CDKAL1 (Accession NP_060244.1) is another GAM1338 target gene, herein designated TARGET GENE. CDKAL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CDKAL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CDKAL1 BINDING SITE, designated SEQ ID:12153, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37770] Another function of GAM1338 is therefore inhibition of CDKAL1 (Accession NP_060244.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CDKAL1.

[37771] Carcinoembryonic antigen-related cell adhesion molecule 8 (CEACAM8, Accession NP_001807.2) is another GAM1338 target gene, herein designated TARGET GENE. CEACAM8 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CEACAM8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of CEACAM8 BINDING SITE, designated SEQ ID:436, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37772] Another function of GAM1338 is therefore inhibition of Carcinoembryonic antigen-related cell adhesion molecule 8 (CEACAM8, Accession NP_001807.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CEACAM8.

[37773] Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_059120.2) is another GAM1338 target gene, herein designated TARGET GENE. CECR1 BINDING SITE1 and CECR1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CECR1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CECR1 BINDING SITE1 and CECR1 BINDING SITE2, designated SEQ ID:15125 and SEQ ID:11209 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37774] Another function of GAM1338 is therefore inhibition of

Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_059120.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CECR1.

[37775] Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_803124.1) is another GAM1338 target gene, herein designated TARGET GENE. CECR1 BINDING SITE1 and CECR1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by CECR1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CECR1 BINDING SITE1 and CECR1 BINDING SITE2, designated SEQ ID:11209 and SEQ ID:15125 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37776] Another function of GAM1338 is therefore inhibition of Cat eye syndrome chromosome region, candidate 1 (CECR1, Accession NP_803124.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CECR1.

[37777] Centromere protein h (CENPH, Accession NP_075060.1) is

another GAM1338 target gene, herein designated TARGET GENE. CENPH BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CENPH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CENPH BINDING SITE, designated SEQ ID:7835, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37778] Another function of GAM1338 is therefore inhibition of Centromere protein h (CENPH, Accession NP_075060.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CENPH.

[37779] Centromere protein j (CENPJ, Accession NP_060921.2) is another GAM1338 target gene, herein designated TARGET GENE. CENPJ BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CENPJ, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CENPJ BINDING SITE, designated SEQ ID:8802,

to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37780] Another function of GAM1338 is therefore inhibition of Centromere protein j (CENPJ, Accession NP_060921.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CENPJ.

[37781] CGI-150 (Accession NP_057164.1) is another GAM1338 target gene, herein designated TARGET GENE. CGI-150 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CGI-150, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CGI-150 BINDING SITE, designated SEQ ID:19951, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37782] Another function of GAM1338 is therefore inhibition of CGI-150 (Accession NP_057164.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CGI-150.

[37783] Chromatin accessibility complex 1 (CHRAC1, Accession

NP_059140.1) is another GAM1338 target gene, herein designated TARGET GENE. CHRAC1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CHRAC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CHRAC1 BINDING SITE, designated SEQ ID:18375, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37784] Another function of GAM1338 is therefore inhibition of Chromatin accessibility complex 1 (CHRAC1, Accession NP_059140.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHRAC1.

[37785] Carbohydrate (chondroitin) synthase 1 (CHSY1, Accession NP_055733.2) is another GAM1338 target gene, herein designated TARGET GENE. CHSY1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CHSY1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CHSY1 BINDING SITE, designated

SEQ ID:18370, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37786] Another function of GAM1338 is therefore inhibition of Carbohydrate (chondroitin) synthase 1 (CHSY1, Accession NP_055733.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CHSY1.

[37787] Cold autoinflammatory syndrome 1 (CIAS1, Accession NP_004886.2) is another GAM1338 target gene, herein designated TARGET GENE. CIAS1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CIAS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CIAS1 BINDING SITE, designated SEQ ID:7985, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37788] Another function of GAM1338 is therefore inhibition of Cold autoinflammatory syndrome 1 (CIAS1, Accession NP_004886.2), a gene which may mediate protein- protein interactions; contains a leucine rich repeat and there-

fore may be associated with Familial cold autoinflammatory syndrome, muckle- wells syndrome. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Familial cold autoinflammatory syndrome, muckle- wells syndrome, and of other diseases and clinical conditions associated with CIAS1.

[37789] The function of CIAS1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM90.1.CIP29 (Accession NP_115740.3) is another GAM1338 target gene, herein designated TARGET GENE. CIP29 BINDING SITE1 and CIP29 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CIP29, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CIP29 BINDING SITE1 and CIP29 BINDING SITE2, designated SEQ ID:11639 and SEQ ID:20120 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37790] Another function of GAM1338 is therefore inhibition of CIP29 (Accession NP_115740.3) . Accordingly, utilities of

GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CIP29.

[37791] C-type (calcium dependent, carbohydrate-recognition domain) lectin, superfamily member 12 (CLECSF12, Accession NP_072092.2) is another GAM1338 target gene, herein designated TARGET GENE. CLECSF12 BINDING SITE1 and CLECSF12 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CLECSF12, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CLECSF12 BINDING SITE1 and CLECSF12 BINDING SITE2, designated SEQ ID:1868 and SEQ ID:10233 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37792] Another function of GAM1338 is therefore inhibition of C-type (calcium dependent, carbohydrate-recognition domain) lectin, superfamily member 12 (CLECSF12, Accession NP_072092.2), a gene which is a pattern- recognition receptor . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CLECSF12.

[37793] The function of CLECSF12 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM47.1.Cell matrix adhesion regulator (CMAR, Accession NP_005191.2) is another GAM1338 target gene, herein designated TARGET GENE. CMAR BINDING SITE1 and CMAR BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CMAR, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CMAR BINDING SITE1 and CMAR BINDING SITE2, designated SEQ ID:6738 and SEQ ID:19999 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37794] Another function of GAM1338 is therefore inhibition of Cell matrix adhesion regulator (CMAR, Accession NP_005191.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CMAR.

[37795] Calponin 2 (CNN2, Accession NP_004359.1) is another GAM1338 target gene, herein designated TARGET GENE. CNN2 BINDING SITE is a target binding site found in the

3` untranslated region of mRNA encoded by CNN2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CNN2 BINDING SITE, designated SEQ ID:6909, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37796] Another function of GAM1338 is therefore inhibition of Calponin 2 (CNN2, Accession NP_004359.1), a gene which may be involved in the structural organization and/or anchorage of actin filaments. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CNN2.

[37797] The function of CNN2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.2',3'-cyclic nucleotide 3' phosphodiesterase (CNP, Accession NP_149124.1) is another GAM1338 target gene, herein designated TARGET GENE. CNP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CNP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of CNP BINDING SITE, designated SEQ ID:5014, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37798] Another function of GAM1338 is therefore inhibition of 2',3'-cyclic nucleotide 3' phosphodiesterase (CNP, Accession NP_149124.1), a gene which can link tubulin to membranes and may regulate cytoplasmic microtubule distribution. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CNP.

[37799] The function of CNP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Collectin sub-family member 12 (COLEC12, Accession NP_110408.2) is another GAM1338 target gene, herein designated TARGET GENE. COLEC12 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by COLEC12, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COLEC12 BINDING SITE, designated

SEQ ID:13793, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37800] Another function of GAM1338 is therefore inhibition of Collectin sub-family member 12 (COLEC12, Accession NP_110408.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COLEC12.

[37801] Coronin, actin binding protein, 1c (CORO1C, Accession NP_055140.1) is another GAM1338 target gene, herein designated TARGET GENE. CORO1C BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CORO1C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CORO1C BINDING SITE, designated SEQ ID:1439, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37802] Another function of GAM1338 is therefore inhibition of Coronin, actin binding protein, 1c (CORO1C, Accession NP_055140.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clini-

cal conditions associated with CORO1C.

[37803] Cox15 homolog, cytochrome c oxidase assembly protein (yeast) (COX15, Accession NP_510870.1) is another GAM1338 target gene, herein designated TARGET GENE. COX15 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by COX15, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of COX15 BINDING SITE, designated SEQ ID:18262, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37804] Another function of GAM1338 is therefore inhibition of Cox15 homolog, cytochrome c oxidase assembly protein (yeast) (COX15, Accession NP_510870.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with COX15.

[37805] Carboxypeptidase a4 (CPA4, Accession NP_057436.1) is another GAM1338 target gene, herein designated TARGET GENE. CPA4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CPA4,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CPA4 BINDING SITE, designated SEQ ID:10987, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37806] Another function of GAM1338 is therefore inhibition of Carboxypeptidase a4 (CPA4, Accession NP_057436.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPA4.

[37807] CPR8 (Accession NP_065790.1) is another GAM1338 target gene, herein designated TARGET GENE. CPR8 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CPR8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CPR8 BINDING SITE, designated SEQ ID:9163, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37808] Another function of GAM1338 is therefore inhibition of CPR8 (Accession NP_065790.1) . Accordingly, utilities of

GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPR8.

[37809] Carbamoyl-phosphate synthetase 1, mitochondrial (CPS1, Accession NP_001866.2) is another GAM1338 target gene, herein designated TARGET GENE. CPS1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CPS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CPS1 BINDING SITE, designated SEQ ID:4147, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37810] Another function of GAM1338 is therefore inhibition of Carbamoyl-phosphate synthetase 1, mitochondrial (CPS1, Accession NP_001866.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPS1.

[37811] Cleavage and polyadenylation specific factor 2, 100kda (CPSF2, Accession XP_029311.2) is another GAM1338 target gene, herein designated TARGET GENE. CPSF2 BINDING SITE1 and CPSF2 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by

CPSF2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CPSF2 BINDING SITE1 and CPSF2 BINDING SITE2, designated SEQ ID:6739 and SEQ ID:6347 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37812] Another function of GAM1338 is therefore inhibition of Cleavage and polyadenylation specific factor 2, 100kda (CPSF2, Accession XP_029311.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CPSF2.

[37813] Complement component (3b/4b) receptor 1, including knops blood group system (CR1, Accession NP_000564.1) is another GAM1338 target gene, herein designated TARGET GENE. CR1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CR1 BINDING SITE, designated SEQ ID:13868, to the nucleotide sequence of

GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37814] Another function of GAM1338 is therefore inhibition of Complement component (3b/4b) receptor 1, including knops blood group system (CR1, Accession NP_000564.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CR1.

[37815] Complement component (3b/4b) receptor 1, including knops blood group system (CR1, Accession NP_000642.2) is another GAM1338 target gene, herein designated TARGET GENE. CR1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CR1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CR1 BINDING SITE, designated SEQ ID:13868, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37816] Another function of GAM1338 is therefore inhibition of Complement component (3b/4b) receptor 1, including knops blood group system (CR1, Accession NP_000642.2)

. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CR1.

[37817] Cytokine receptor-like factor 3 (CRLF3, Accession NP_057070.2) is another GAM1338 target gene, herein designated TARGET GENE. CRLF3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CRLF3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRLF3 BINDING SITE, designated SEQ ID:9675, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37818] Another function of GAM1338 is therefore inhibition of Cytokine receptor-like factor 3 (CRLF3, Accession NP_057070.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRLF3.

[37819] Cofactor required for sp1 transcriptional activation, subunit 6, 77kda (CRSP6, Accession NP_004259.3) is another GAM1338 target gene, herein designated TARGET GENE. CRSP6 BINDING SITE is a target binding site found in the

3` untranslated region of mRNA encoded by CRSP6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRSP6 BINDING SITE, designated SEQ ID:12005, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37820] Another function of GAM1338 is therefore inhibition of Cofactor required for sp1 transcriptional activation, subunit 6, 77kda (CRSP6, Accession NP_004259.3), a gene which is required for Sp1 mediated transcriptional activation with TAF(II)s. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRSP6.

[37821] The function of CRSP6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Cartilage associated protein (CRTAP, Accession NP_006362.1) is another GAM1338 target gene, herein designated TARGET GENE. CRTAP BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CRTAP, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BIND-

ING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRTAP BINDING SITE, designated SEQ ID:776, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37822] Another function of GAM1338 is therefore inhibition of Cartilage associated protein (CRTAP, Accession NP_006362.1), a gene which is a novel developmentally regulated chick embryo protein. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRTAP.

[37823] The function of CRTAP and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Crystallin, zeta (quinone reductase)-like 1 (CRYZL1, Accession NP_665857.1) is another GAM1338 target gene, herein designated TARGET GENE. CRYZL1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CRYZL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRYZL1 BINDING SITE, designated

SEQ ID:2539, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37824] Another function of GAM1338 is therefore inhibition of Crystallin, zeta (quinone reductase)-like 1 (CRYZL1, Accession NP_665857.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CRYZL1.

[37825] Crystallin, zeta (quinone reductase)-like 1 (CRYZL1, Accession NP_660354.1) is another GAM1338 target gene, herein designated TARGET GENE. CRYZL1 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CRYZL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CRYZL1 BINDING SITE, designated SEQ ID:2539, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37826] Another function of GAM1338 is therefore inhibition of Crystallin, zeta (quinone reductase)-like 1 (CRYZL1, Accession NP_660354.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases

and clinical conditions associated with CRYZL1.

[37827] CSE-C (Accession NP_061851.1) is another GAM1338 target gene, herein designated TARGET GENE. CSE-C BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by CSE-C, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CSE-C BINDING SITE, designated SEQ ID:2336, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37828] Another function of GAM1338 is therefore inhibition of CSE-C (Accession NP_061851.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CSE-C.

[37829] Cse1 chromosome segregation 1-like (yeast) (CSE1L, Accession NP_803185.1) is another GAM1338 target gene, herein designated TARGET GENE. CSE1L BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by CSE1L, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of CSE1L BINDING SITE, designated SEQ ID:3997, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37830] Another function of GAM1338 is therefore inhibition of Cse1 chromosome segregation 1-like (yeast) (CSE1L, Accession NP_803185.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CSE1L.

[37831] Casein kinase 2, alpha prime polypeptide (CSNK2A2, Accession NP_001887.1) is another GAM1338 target gene, herein designated TARGET GENE. CSNK2A2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by CSNK2A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CSNK2A2 BINDING SITE, designated SEQ ID:15382, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37832] Another function of GAM1338 is therefore inhibition of Casein kinase 2, alpha prime polypeptide (CSNK2A2, Accession NP_001887.1), a gene which catalyzes the phos-

phorylation of serine or threonine residues in proteins. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CSNK2A2.

[37833] The function of CSNK2A2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Cardiotrophin 1 (CTF1, Accession NP_001321.1) is another GAM1338 target gene, herein designated TARGET GENE. CTF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CTF1 BINDING SITE, designated SEQ ID:6515, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37834] Another function of GAM1338 is therefore inhibition of Cardiotrophin 1 (CTF1, Accession NP_001321.1), a gene which may play a role in cardiac hypertrophy. and therefore may be associated with Cardiac hypertrophy. Accordingly, utilities of GAM1338 include diagnosis, prevention

and treatment of Cardiac hypertrophy, and of other diseases and clinical conditions associated with CTF1.

[37835] The function of CTF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Cathepsin s (CTSS, Accession NP_004070.3) is another GAM1338 target gene, herein designated TARGET GENE. CTSS BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CTSS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CTSS BINDING SITE, designated SEQ ID:7946, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37836] Another function of GAM1338 is therefore inhibition of Cathepsin s (CTSS, Accession NP_004070.3), a gene which is a lysosomal cysteine (thiol) protease that cleaves elastin. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CTSS.

[37837] The function of CTSS and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM72.1.Chemokine (c-x-c motif) ligand 16 (CXCL16, Accession NP_071342.1) is another GAM1338 target gene, herein designated TARGET GENE. CXCL16 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CXCL16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CXCL16 BINDING SITE, designated SEQ ID:11701, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37838] Another function of GAM1338 is therefore inhibition of Chemokine (c-x-c motif) ligand 16 (CXCL16, Accession NP_071342.1), a gene which induces calcium mobilization. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CXCL16.

[37839] The function of CXCL16 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Chemokine (c-x-c motif) ligand 6 (granulocyte chemotactic protein 2) (CXCL6, Accession

NP_002984.1) is another GAM1338 target gene, herein designated TARGET GENE. CXCL6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CXCL6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CXCL6 BINDING SITE, designated SEQ ID:7236, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37840] Another function of GAM1338 is therefore inhibition of Chemokine (c-x-c motif) ligand 6 (granulocyte chemotactic protein 2) (CXCL6, Accession NP_002984.1), a gene which is chemotactic for neutrophil granulocytes. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CXCL6.

[37841] The function of CXCL6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM281.1.CYCS (Accession NP_061820.1) is another GAM1338 target gene, herein designated TARGET GENE. CYCS BINDING SITE1 through CYCS BINDING SITE3 are tar-

get binding sites found in untranslated regions of mRNA encoded by CYCS, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYCS BINDING SITE1 through CYCS BINDING SITE3, designated SEQ ID:15642, SEQ ID:14950 and SEQ ID:19693 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37842] Another function of GAM1338 is therefore inhibition of CYCS (Accession NP_061820.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYCS.

[37843] Cylicin, basic protein of sperm head cytoskeleton 2 (CYLC2, Accession NP_001331.1) is another GAM1338 target gene, herein designated TARGET GENE. CYLC2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CYLC2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYLC2 BINDING SITE, designated SEQ ID:12632, to the nucleotide sequence of GAM1338 RNA, herein designated

GAM RNA, also designated SEQ ID:360.

[37844] Another function of GAM1338 is therefore inhibition of Cylicin, basic protein of sperm head cytoskeleton 2 (CYLC2, Accession NP_001331.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYLC2.

[37845] Cytochrome p450, subfamily i (aromatic compound-inducible), polypeptide 2 (CYP1A2, Accession NP_000752.1) is another GAM1338 target gene, herein designated TARGET GENE. CYP1A2 BINDING SITE1 through CYP1A2 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by CYP1A2, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYP1A2 BINDING SITE1 through CYP1A2 BINDING SITE3, designated SEQ ID:6816, SEQ ID:8688 and SEQ ID:13973 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37846] Another function of GAM1338 is therefore inhibition of Cytochrome p450, subfamily i (aromatic compound-inducible), polypeptide 2 (CYP1A2, Accession NP_000752.1), a gene which intervenes in an NADPH- de-

pendent electron transport pathway. and therefore may be associated with Porphyria cutanea tarda. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Porphyria cutanea tarda, and of other diseases and clinical conditions associated with CYP1A2.

[37847] The function of CYP1A2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Cytochrome p450, subfamily iib (phenobarbital-inducible), polypeptide 6 (CYP2B6, Accession NP_000758.1) is another GAM1338 target gene, herein designated TARGET GENE. CYP2B6 BINDING SITE1 and CYP2B6 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by CYP2B6, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYP2B6 BINDING SITE1 and CYP2B6 BINDING SITE2, designated SEQ ID:3011 and SEQ ID:4525 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37848] Another function of GAM1338 is therefore inhibition of Cytochrome p450, subfamily iib

(phenobarbital-inducible), polypeptide 6 (CYP2B6, Accession NP_000758.1), a gene which oxidizes a variety of structurally unrelated compounds, including steroids, fatty acids, and xenobiotics. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYP2B6.

[37849] The function of CYP2B6 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Cytochrome p450, subfamily ivf, polypeptide 3 (leukotriene b4 omega hydroxylase) (CYP4F3, Accession NP_000887.1) is another GAM1338 target gene, herein designated TARGET GENE. CYP4F3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CYP4F3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYP4F3 BINDING SITE, designated SEQ ID:1417, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37850] Another function of GAM1338 is therefore inhibition of Cytochrome p450, subfamily ivf, polypeptide 3

(leukotriene b4 omega hydroxylase) (CYP4F3, Accession NP_000887.1), a gene which converts leukotriene B4 into the less active 20- hydroxy- leukotriene B4. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYP4F3.

[37851] The function of CYP4F3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM67.1.CYP51A1 (Accession NP_000777.1) is another GAM1338 target gene, herein designated TARGET GENE. CYP51A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CYP51A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYP51A1 BINDING SITE, designated SEQ ID:10631, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37852] Another function of GAM1338 is therefore inhibition of CYP51A1 (Accession NP_000777.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with CYP51A1.

[37853] Cytochrome p450, subfamily viiib (sterol 12-alpha-hydroxylase), polypeptide 1 (CYP8B1, Accession NP_004382.1) is another GAM1338 target gene, herein designated TARGET GENE. CYP8B1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by CYP8B1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of CYP8B1 BINDING SITE, designated SEQ ID:5584, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37854] Another function of GAM1338 is therefore inhibition of Cytochrome p450, subfamily viiib (sterol 12-alpha-hydroxylase), polypeptide 1 (CYP8B1, Accession NP_004382.1), a gene which functions in bile acid biosynthesis. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with CYP8B1.

[37855] The function of CYP8B1 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM47.1.Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835365.1) is another GAM1338 target gene, herein designated TARGET GENE. DCX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DCX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DCX BINDING SITE, designated SEQ ID:6035, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37856] Another function of GAM1338 is therefore inhibition of Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835365.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCX.

[37857] Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835366.1) is another GAM1338 target gene, herein designated TARGET GENE. DCX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DCX, corresponding to a target binding site such as BINDING

SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DCX BINDING SITE, designated SEQ ID:6035, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37858] Another function of GAM1338 is therefore inhibition of Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835366.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCX.

[37859] Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_835364.1) is another GAM1338 target gene, herein designated TARGET GENE. DCX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DCX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DCX BINDING SITE, designated SEQ ID:6035, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37860] Another function of GAM1338 is therefore inhibition of Doublecortex; lissencephaly, x-linked (doublecortin)

(DCX, Accession NP_835364.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCX.

[37861] Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_000546.2) is another GAM1338 target gene, herein designated TARGET GENE. DCX BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DCX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DCX BINDING SITE, designated SEQ ID:6035, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37862] Another function of GAM1338 is therefore inhibition of Doublecortex; lissencephaly, x-linked (doublecortin) (DCX, Accession NP_000546.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DCX.

[37863] Dead/h (asp-glu-ala-asp/his) box polypeptide 31 (DDX31, Accession NP_619526.1) is another GAM1338 target gene, herein designated TARGET GENE. DDX31 BINDING SITE is a target binding site found in the 3` un-

translated region of multiple transcripts of mRNA encoded by DDX31, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DDX31 BINDING SITE, designated SEQ ID:17894, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37864] Another function of GAM1338 is therefore inhibition of Dead/h (asp-glu-ala-asp/his) box polypeptide 31 (DDX31, Accession NP_619526.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DDX31.

[37865] Desmin (DES, Accession NP_001918.2) is another GAM1338 target gene, herein designated TARGET GENE. DES BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DES, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DES BINDING SITE, designated SEQ ID:5111, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37866] Another function of GAM1338 is therefore inhibition of Desmin (DES, Accession NP_001918.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DES.

[37867] Dna fragmentation factor, 40kda, beta polypeptide (caspase-activated dnase) (DFFB, Accession NP_004393.1) is another GAM1338 target gene, herein designated TARGET GENE. DFFB BINDING SITE1 and DFFB BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by DFFB, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DFFB BINDING SITE1 and DFFB BINDING SITE2, designated SEQ ID:7574 and SEQ ID:7848 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37868] Another function of GAM1338 is therefore inhibition of Dna fragmentation factor, 40kda, beta polypeptide (caspase-activated dnase) (DFFB, Accession NP_004393.1), a gene which induces DNA fragmentation and chromatin condensation during apoptosis. Accord-

ingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DFFB.

[37869] The function of DFFB and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM130.1.Diaphanous homolog 2 (drosophila) (DIAPH2, Accession NP_006720.1) is another GAM1338 target gene, herein designated TARGET GENE. DIAPH2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DIAPH2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DIAPH2 BINDING SITE, designated SEQ ID:12586, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37870] Another function of GAM1338 is therefore inhibition of Diaphanous homolog 2 (drosophila) (DIAPH2, Accession NP_006720.1), a gene which may affect in oogenesis and therefore may be associated with Premature ovarian failure . Accordingly, utilities of GAM1338 include diagnosis,

prevention and treatment of Premature ovarian failure ., and of other diseases and clinical conditions associated with DIAPH2.

[37871] The function of DIAPH2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.1.Disrupted in schizophrenia 1 (DISC1, Accession NP_061132.1) is another GAM1338 target gene, herein designated TARGET GENE. DISC1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DISC1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DISC1 BINDING SITE, designated SEQ ID:13620, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37872] Another function of GAM1338 is therefore inhibition of Disrupted in schizophrenia 1 (DISC1, Accession NP_061132.1), a gene which has globular N- terminal domain(s) and a helical C- terminal domain. and therefore may be associated with Schizophrenia . Accordingly, utilities of GAM1338 include diagnosis, prevention and treat-

ment of Schizophrenia ., and of other diseases and clinical conditions associated with DISC1.

[37873] The function of DISC1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM116.1.DKFZP434B044 (Accession NP_113664.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZP434B044 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP434B044, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434B044 BINDING SITE, designated SEQ ID:11474, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37874] Another function of GAM1338 is therefore inhibition of DKFZP434B044 (Accession NP_113664.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434B044.

[37875] DKFZP434B1727 (Accession NP_115519.1) is another GAM1338 target gene, herein designated TARGET GENE.

DKFZP434B1727 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP434B1727, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434B1727 BINDING SITE, designated SEQ ID:1107, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37876] Another function of GAM1338 is therefore inhibition of DKFZP434B1727 (Accession NP_115519.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434B1727.

[37877] DKFZp434C0923 (Accession NP_060068.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZp434C0923 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp434C0923, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434C0923 BINDING SITE, designated SEQ ID:7947, to the nucleotide sequence of

GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37878] Another function of GAM1338 is therefore inhibition of DKFZp434C0923 (Accession NP_060068.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434C0923.

[37879] DKFZP434C212 (Accession XP_044196.3) is another GAM1338 target gene, herein designated TARGET GENE. DKFZP434C212 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP434C212, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434C212 BINDING SITE, designated SEQ ID:5299, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37880] Another function of GAM1338 is therefore inhibition of DKFZP434C212 (Accession XP_044196.3) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434C212.

[37881] DKFZP434D146 (Accession NP_056410.2) is another GAM1338 target gene, herein designated TARGET GENE. DKFZP434D146 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP434D146, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434D146 BINDING SITE, designated SEQ ID:4843, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37882] Another function of GAM1338 is therefore inhibition of DKFZP434D146 (Accession NP_056410.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP434D146.

[37883] DKFZp434E2220 (Accession NP_060082.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZp434E2220 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZp434E2220, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of DKFZp434E2220 BINDING SITE, designated SEQ ID:18031, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37884] Another function of GAM1338 is therefore inhibition of DKFZp434E2220 (Accession NP_060082.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434E2220.

[37885] DKFZP434F0318 (Accession NP_110444.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZP434F0318 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP434F0318, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP434F0318 BINDING SITE, designated SEQ ID:14671, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37886] Another function of GAM1338 is therefore inhibition of DKFZP434F0318 (Accession NP_110444.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with DKFZP434F0318.

[37887] DKFZp434F1719 (Accession NP_115624.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZp434F1719 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp434F1719, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp434F1719 BINDING SITE, designated SEQ ID:4173, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37888] Another function of GAM1338 is therefore inhibition of DKFZp434F1719 (Accession NP_115624.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp434F1719.

[37889] DKFZp547H025 (Accession NP_064546.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZp547H025 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp547H025, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp547H025 BINDING SITE, designated SEQ ID:1994, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37890] Another function of GAM1338 is therefore inhibition of DKFZp547H025 (Accession NP_064546.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp547H025.

[37891] DKFZp547P234 (Accession NP_694590.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZp547P234 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp547P234, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp547P234 BINDING SITE, designated SEQ ID:3007, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37892] Another function of GAM1338 is therefore inhibition of

DKFZp547P234 (Accession NP_694590.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp547P234.

[37893] DKFZP564D166 (Accession NP_108648.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZP564D166 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DKFZP564D166, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564D166 BINDING SITE, designated SEQ ID:13202, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37894] Another function of GAM1338 is therefore inhibition of DKFZP564D166 (Accession NP_108648.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564D166.

[37895] DKFZP564G092 (Accession NP_056416.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZP564G092 BINDING SITE is a target binding site

found in the 5` untranslated region of mRNA encoded by DKFZP564G092, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564G092 BINDING SITE, designated SEQ ID:519, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37896] Another function of GAM1338 is therefore inhibition of DKFZP564G092 (Accession NP_056416.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564G092.

[37897] DKFZP564I122 (Accession XP_032397.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZP564I122 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP564I122, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564I122 BINDING SITE, designated SEQ ID:19815, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:360.

[37898] Another function of GAM1338 is therefore inhibition of DKFZP564I122 (Accession XP_032397.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564I122.

[37899] DKFZP564J0863 (Accession NP_056274.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZP564J0863 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP564J0863, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564J0863 BINDING SITE, designated SEQ ID:18946, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37900] Another function of GAM1338 is therefore inhibition of DKFZP564J0863 (Accession NP_056274.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564J0863.

[37901] DKFZP564K0322 (Accession NP_114429.1) is another

GAM1338 target gene, herein designated TARGET GENE. DKFZP564K0322 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP564K0322, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564K0322 BINDING SITE, designated SEQ ID:1414, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37902] Another function of GAM1338 is therefore inhibition of DKFZP564K0322 (Accession NP_114429.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP564K0322.

[37903] DKFZp564K142 (Accession NP_115497.2) is another GAM1338 target gene, herein designated TARGET GENE. DKFZp564K142 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp564K142, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp564K142 BINDING SITE,

designated SEQ ID:811, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37904] Another function of GAM1338 is therefore inhibition of DKFZp564K142 (Accession NP_115497.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp564K142.

[37905] DKFZP564O0523 (Accession NP_115496.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZP564O0523 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP564O0523, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP564O0523 BINDING SITE, designated SEQ ID:1963, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37906] Another function of GAM1338 is therefore inhibition of DKFZP564O0523 (Accession NP_115496.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated

with DKFZP564O0523.

[37907] DKFZP566D1346 (Accession NP_110443.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZP566D1346 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZP566D1346, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP566D1346 BINDING SITE, designated SEQ ID:12834, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37908] Another function of GAM1338 is therefore inhibition of DKFZP566D1346 (Accession NP_110443.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP566D1346.

[37909] DKFZP566I1024 (Accession NP_056226.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZP566I1024 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP566I1024, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP566I1024 BINDING SITE, designated SEQ ID:2402, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37910] Another function of GAM1338 is therefore inhibition of DKFZP566I1024 (Accession NP_056226.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP566I1024.

[37911] DKFZP586D0919 (Accession NP_056248.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZP586D0919 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZP586D0919, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZP586D0919 BINDING SITE, designated SEQ ID:5664, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37912] Another function of GAM1338 is therefore inhibition of DKFZP586D0919 (Accession NP_056248.1) . Accordingly,

utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZP586D0919.

[37913] DKFZp667B1218 (Accession NP_808881.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZp667B1218 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp667B1218, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp667B1218 BINDING SITE, designated SEQ ID:13142, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37914] Another function of GAM1338 is therefore inhibition of DKFZp667B1218 (Accession NP_808881.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp667B1218.

[37915] DKFZp667E0512 (Accession XP_117353.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZp667E0512 BINDING SITE1 and DKFZp667E0512 BINDING SITE2 are target binding sites found in untrans-

lated regions of mRNA encoded by DKFZp667E0512, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp667E0512 BINDING SITE1 and DKFZp667E0512 BINDING SITE2, designated SEQ ID:17043 and SEQ ID:9198 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37916] Another function of GAM1338 is therefore inhibition of DKFZp667E0512 (Accession XP_117353.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp667E0512.

[37917] DKFZp761B107 (Accession NP_775734.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZp761B107 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp761B107, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761B107 BINDING SITE, designated SEQ ID:5298, to the nucleotide sequence of

GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37918] Another function of GAM1338 is therefore inhibition of DKFZp761B107 (Accession NP_775734.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761B107.

[37919] DKFZp761B128 (Accession NP_689650.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZp761B128 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZp761B128, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761B128 BINDING SITE, designated SEQ ID:436, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37920] Another function of GAM1338 is therefore inhibition of DKFZp761B128 (Accession NP_689650.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761B128.

[37921] DKFZp761H039 (Accession NP_061181.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZp761H039 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp761H039, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761H039 BINDING SITE, designated SEQ ID:12709, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37922] Another function of GAM1338 is therefore inhibition of DKFZp761H039 (Accession NP_061181.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761H039.

[37923] DKFZp761J139 (Accession NP_115656.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZp761J139 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZp761J139, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nu-

cleotide sequences of DKFZp761J139 BINDING SITE, designated SEQ ID:969, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37924] Another function of GAM1338 is therefore inhibition of DKFZp761J139 (Accession NP_115656.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761J139.

[37925] DKFZp761N1114 (Accession XP_086327.6) is another GAM1338 target gene, herein designated TARGET GENE. DKFZp761N1114 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp761N1114, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761N1114 BINDING SITE, designated SEQ ID:10882, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37926] Another function of GAM1338 is therefore inhibition of DKFZp761N1114 (Accession XP_086327.6) . Accordingly, utilities of GAM1338 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with DKFZp761N1114.

[37927] DKFZp761O0113 (Accession NP_060879.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZp761O0113 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DKFZp761O0113, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761O0113 BINDING SITE, designated SEQ ID:11194, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37928] Another function of GAM1338 is therefore inhibition of DKFZp761O0113 (Accession NP_060879.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761O0113.

[37929] DKFZp761P1121 (Accession NP_690870.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZp761P1121 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp761P1121, corresponding to a target binding site

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp761P1121 BINDING SITE, designated SEQ ID:1413, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37930] Another function of GAM1338 is therefore inhibition of DKFZp761P1121 (Accession NP_690870.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp761P1121.

[37931] DKFZp762C2414 (Accession NP_848637.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZp762C2414 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp762C2414, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp762C2414 BINDING SITE, designated SEQ ID:11830, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37932] Another function of GAM1338 is therefore inhibition of

DKFZp762C2414 (Accession NP_848637.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp762C2414.

[37933] DKFZp762H185 (Accession XP_172976.2) is another GAM1338 target gene, herein designated TARGET GENE. DKFZp762H185 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp762H185, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp762H185 BINDING SITE, designated SEQ ID:2137, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37934] Another function of GAM1338 is therefore inhibition of DKFZp762H185 (Accession XP_172976.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp762H185.

[37935] DKFZp762I137 (Accession NP_689624.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZp762I137 BINDING SITE is a target binding site found

in the 3` untranslated region of mRNA encoded by DKFZp762I137, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp762I137 BINDING SITE, designated SEQ ID:11659, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37936] Another function of GAM1338 is therefore inhibition of DKFZp762I137 (Accession NP_689624.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp762I137.

[37937] DKFZp762I194 (Accession NP_689597.1) is another GAM1338 target gene, herein designated TARGET GENE. DKFZp762I194 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp762I194, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp762I194 BINDING SITE, designated SEQ ID:19272, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:360.

[37938] Another function of GAM1338 is therefore inhibition of DKFZp762I194 (Accession NP_689597.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp762I194.

[37939] DKFZp762L0311 (Accession NP_061189.2) is another GAM1338 target gene, herein designated TARGET GENE. DKFZp762L0311 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DKFZp762L0311, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DKFZp762L0311 BINDING SITE, designated SEQ ID:13546, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37940] Another function of GAM1338 is therefore inhibition of DKFZp762L0311 (Accession NP_061189.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DKFZp762L0311.

[37941] Dynein, axonemal, heavy polypeptide 11 (DNAH11, Ac-

cession NP_003768.1) is another GAM1338 target gene, herein designated TARGET GENE. DNAH11 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DNAH11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DNAH11 BINDING SITE, designated SEQ ID:18338, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37942] Another function of GAM1338 is therefore inhibition of Dynein, axonemal, heavy polypeptide 11 (DNAH11, Accession NP_003768.1), a gene which may function as a motor protein. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DNAH11.

[37943] The function of DNAH11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.DRIM (Accession NP_055318.1) is another GAM1338 target gene, herein designated TARGET GENE. DRIM BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DRIM, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DRIM BINDING SITE, designated SEQ ID:2324, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37944] Another function of GAM1338 is therefore inhibition of DRIM (Accession NP_055318.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DRIM.

[37945] Dentatorubral-pallidoluysian atrophy (atrophin-1) (DRPLA, Accession NP_001931.1) is another GAM1338 target gene, herein designated TARGET GENE. DRPLA BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by DRPLA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DRPLA BINDING SITE, designated SEQ ID:8154, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37946] Another function of GAM1338 is therefore inhibition of Dentatorubral-pallidoluysian atrophy (atrophin-1) (DRPLA,

Accession NP_001931.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DRPLA.

[37947] Desmocollin 3 (DSC3, Accession NP_001932.1) is another GAM1338 target gene, herein designated TARGET GENE. DSC3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DSC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DSC3 BINDING SITE, designated SEQ ID:2085, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37948] Another function of GAM1338 is therefore inhibition of Desmocollin 3 (DSC3, Accession NP_001932.1), a gene which is a component of intercellular desmosome junctions. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DSC3.

[37949] The function of DSC3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM30.1.Desmocollin 3 (DSC3, Accession NP_077741.1) is another GAM1338 target gene, herein designated TARGET GENE. DSC3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by DSC3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DSC3 BINDING SITE, designated SEQ ID:2085, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37950] Another function of GAM1338 is therefore inhibition of Desmocollin 3 (DSC3, Accession NP_077741.1), a gene which is a component of intercellular desmosome junctions. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DSC3.

[37951] The function of DSC3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM30.1.Down syndrome critical region gene 6 (DSCR6, Accession NP_061835.1) is another GAM1338 target gene, herein designated TARGET GENE. DSCR6

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DSCR6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DSCR6 BINDING SITE, designated SEQ ID:17339, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37952] Another function of GAM1338 is therefore inhibition of Down syndrome critical region gene 6 (DSCR6, Accession NP_061835.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DSCR6.

[37953] DUPLIN (Accession XP_208760.3) is another GAM1338 target gene, herein designated TARGET GENE. DUPLIN BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DUPLIN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DUPLIN BINDING SITE, designated SEQ ID:2517, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37954] Another function of GAM1338 is therefore inhibition of DUPLIN (Accession XP_208760.3) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DUPLIN.

[37955] DUSP18 (Accession NP_689724.2) is another GAM1338 target gene, herein designated TARGET GENE. DUSP18 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by DUSP18, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DUSP18 BINDING SITE, designated SEQ ID:19123, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37956] Another function of GAM1338 is therefore inhibition of DUSP18 (Accession NP_689724.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DUSP18.

[37957] Dual specificity phosphatase 19 (DUSP19, Accession NP_543152.1) is another GAM1338 target gene, herein designated TARGET GENE. DUSP19 BINDING SITE1 and DUSP19 BINDING SITE2 are target binding sites found in

untranslated regions of mRNA encoded by DUSP19, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DUSP19 BINDING SITE1 and DUSP19 BINDING SITE2, designated SEQ ID:710 and SEQ ID:969 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37958] Another function of GAM1338 is therefore inhibition of Dual specificity phosphatase 19 (DUSP19, Accession NP_543152.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with DUSP19.

[37959] Dual-specificity tyrosine-(y)-phosphorylation regulated kinase 1a (DYRK1A, Accession NP_567824.1) is another GAM1338 target gene, herein designated TARGET GENE. DYRK1A BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by DYRK1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of DYRK1A BINDING SITE, designated SEQ ID:14469, to the nucleotide sequence of

GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37960] Another function of GAM1338 is therefore inhibition of Dual-specificity tyrosine-(y)-phosphorylation regulated kinase 1a (DYRK1A, Accession NP_567824.1), a gene which regulates cell proliferation and may be involved in brain development . and therefore may be associated with Down syndrome. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Down syndrome, and of other diseases and clinical conditions associated with DYRK1A.

[37961] The function of DYRK1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM63.1.Endometrial bleeding associated factor (left-right determination, factor a; transforming growth factor beta superfamily) (EBAF, Accession NP_003231.2) is another GAM1338 target gene, herein designated TARGET GENE. EBAF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EBAF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide se-

quences of EBAF BINDING SITE, designated SEQ ID:7720, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37962] Another function of GAM1338 is therefore inhibition of Endometrial bleeding associated factor (left-right determination, factor a; transforming growth factor beta superfamily) (EBAF, Accession NP_003231.2), a gene which LEFT- RIGHT AXIS MALFORMATIONS and therefore is associated with Left- right axis malformations. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Left- right axis malformations, and of other diseases and clinical conditions associated with EBAF.

[37963] The function of EBAF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.EEF2K (Accession NP_037434.1) is another GAM1338 target gene, herein designated TARGET GENE. EEF2K BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EEF2K, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EEF2K BINDING SITE, designated SEQ ID:11618, to the

nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37964] Another function of GAM1338 is therefore inhibition of EEF2K (Accession NP_037434.1), a gene which phosphorylates serine or threonine on the eukaryotic elongation factor- 2 and therefore may be associated with Systemic lupus erythematosus and cancer. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Systemic lupus erythematosus and cancer, and of other diseases and clinical conditions associated with EEF2K.

[37965] The function of EEF2K and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Eh-domain containing 1 (EHD1, Accession NP_006786.2) is another GAM1338 target gene, herein designated TARGET GENE. EHD1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EHD1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EHD1 BINDING SITE, designated SEQ ID:14949, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ

ID:360.

[37966] Another function of GAM1338 is therefore inhibition of Eh-domain containing 1 (EHD1, Accession NP_006786.2), a gene which may be involved in ligand- initiated endocytosis. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EHD1.

[37967] The function of EHD1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.1.Eh-domain containing 2 (EHD2, Accession NP_055416.2) is another GAM1338 target gene, herein designated TARGET GENE. EHD2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EHD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EHD2 BINDING SITE, designated SEQ ID:6934, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37968] Another function of GAM1338 is therefore inhibition of Eh-domain containing 2 (EHD2, Accession NP_055416.2) .

Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EHD2.

[37969] Eukaryotic translation initiation factor 2, subunit 3 gamma, 52kda (EIF2S3, Accession NP_001406.1) is another GAM1338 target gene, herein designated TARGET GENE. EIF2S3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EIF2S3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EIF2S3 BINDING SITE, designated SEQ ID:11659, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37970] Another function of GAM1338 is therefore inhibition of Eukaryotic translation initiation factor 2, subunit 3 gamma, 52kda (EIF2S3, Accession NP_001406.1), a gene which functions in the early steps of protein synthesis. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EIF2S3.

[37971] The function of EIF2S3 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM189.1.Eukaryotic translation initiation factor 5a2 (EIF5A2, Accession NP_065123.1) is another GAM1338 target gene, herein designated TARGET GENE. EIF5A2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EIF5A2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EIF5A2 BINDING SITE, designated SEQ ID:1333, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37972] Another function of GAM1338 is therefore inhibition of Eukaryotic translation initiation factor 5a2 (EIF5A2, Accession NP_065123.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EIF5A2.

[37973] ELP3 (Accession NP_060561.3) is another GAM1338 target gene, herein designated TARGET GENE. ELP3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ELP3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the comple-

mentarity of the nucleotide sequences of ELP3 BINDING SITE, designated SEQ ID:6182, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37974] Another function of GAM1338 is therefore inhibition of ELP3 (Accession NP_060561.3) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ELP3.

[37975] Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690882.1) is another GAM1338 target gene, herein designated TARGET GENE. EMR2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by EMR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EMR2 BINDING SITE, designated SEQ ID:433, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37976] Another function of GAM1338 is therefore inhibition of Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690882.1) . Ac-

cordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EMR2.

[37977] Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_038475.2) is another GAM1338 target gene, herein designated TARGET GENE. EMR2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by EMR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EMR2 BINDING SITE, designated SEQ ID:433, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37978] Another function of GAM1338 is therefore inhibition of Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_038475.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EMR2.

[37979] Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690883.1) is

another GAM1338 target gene, herein designated TARGET GENE. EMR2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by EMR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EMR2 BINDING SITE, designated SEQ ID:433, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37980] Another function of GAM1338 is therefore inhibition of Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690883.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EMR2.

[37981] Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690885.1) is another GAM1338 target gene, herein designated TARGET GENE. EMR2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by EMR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BIND-

ING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EMR2 BINDING SITE, designated SEQ ID:433, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37982] Another function of GAM1338 is therefore inhibition of Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690885.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EMR2.

[37983] Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690880.1) is another GAM1338 target gene, herein designated TARGET GENE. EMR2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by EMR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EMR2 BINDING SITE, designated SEQ ID:433, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37984] Another function of GAM1338 is therefore inhibition of Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690880.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EMR2.

[37985] Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690881.1) is another GAM1338 target gene, herein designated TARGET GENE. EMR2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by EMR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EMR2 BINDING SITE, designated SEQ ID:433, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37986] Another function of GAM1338 is therefore inhibition of Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690881.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions as-

sociated with EMR2.

[37987] Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690884.1) is another GAM1338 target gene, herein designated TARGET GENE. EMR2 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by EMR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EMR2 BINDING SITE, designated SEQ ID:433, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37988] Another function of GAM1338 is therefore inhibition of Egf-like module containing, mucin-like, hormone receptor-like sequence 2 (EMR2, Accession NP_690884.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EMR2.

[37989] Endonuclease g-like 1 (ENDOGL1, Accession NP_005098.1) is another GAM1338 target gene, herein designated TARGET GENE. ENDOGL1 BINDING SITE is a target binding site found in the 3` untranslated region of

mRNA encoded by ENDOGL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ENDOGL1 BINDING SITE, designated SEQ ID:4223, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37990] Another function of GAM1338 is therefore inhibition of Endonuclease g-like 1 (ENDOGL1, Accession NP_005098.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ENDOGL1.

[37991] Epiregulin (EREG, Accession NP_001423.1) is another GAM1338 target gene, herein designated TARGET GENE. EREG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by EREG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EREG BINDING SITE, designated SEQ ID:430, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37992] Another function of GAM1338 is therefore inhibition of

Epiregulin (EREG, Accession NP_001423.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EREG.

[37993] ET(B)R-LP-2 (Accession NP_004758.2) is another GAM1338 target gene, herein designated TARGET GENE. ET(B)R-LP-2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ET(B)R-LP-2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ET(B)R-LP-2 BINDING SITE, designated SEQ ID:6465, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37994] Another function of GAM1338 is therefore inhibition of ET(B)R-LP-2 (Accession NP_004758.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ET(B)R-LP-2.

[37995] Ellis van creveld syndrome (EVC, Accession NP_714928.1) is another GAM1338 target gene, herein designated TARGET GENE. EVC BINDING SITE is a target binding site found

in the 3` untranslated region of multiple transcripts of mRNA encoded by EVC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EVC BINDING SITE, designated SEQ ID:4148, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[37996] Another function of GAM1338 is therefore inhibition of Ellis van creveld syndrome (EVC, Accession NP_714928.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EVC.

[37997] Ellis van creveld syndrome (EVC, Accession NP_055371.1) is another GAM1338 target gene, herein designated TARGET GENE. EVC BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by EVC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EVC BINDING SITE, designated SEQ ID:4148, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ

ID:360.

[37998] Another function of GAM1338 is therefore inhibition of Ellis van creveld syndrome (EVC, Accession NP_055371.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EVC.

[37999] Ecotropic viral integration site 5 (EVI5, Accession NP_005656.2) is another GAM1338 target gene, herein designated TARGET GENE. EVI5 BINDING SITE1 and EVI5 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by EVI5, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of EVI5 BINDING SITE1 and EVI5 BINDING SITE2, designated SEQ ID:16074 and SEQ ID:18007 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38000] Another function of GAM1338 is therefore inhibition of Ecotropic viral integration site 5 (EVI5, Accession NP_005656.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with EVI5.

[38001] F11R (Accession NP_653085.1) is another GAM1338 target gene, herein designated TARGET GENE. F11R BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by F11R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F11R BINDING SITE, designated SEQ ID:16292, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38002] Another function of GAM1338 is therefore inhibition of F11R (Accession NP_653085.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F11R.

[38003] F11R (Accession NP_653087.1) is another GAM1338 target gene, herein designated TARGET GENE. F11R BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by F11R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F11R BINDING SITE, designated SEQ ID:16292, to the nucleotide sequence of GAM1338 RNA, herein des-

ignated GAM RNA, also designated SEQ ID:360.

[38004] Another function of GAM1338 is therefore inhibition of F11R (Accession NP_653087.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F11R.

[38005] F11R (Accession NP_058642.1) is another GAM1338 target gene, herein designated TARGET GENE. F11R BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by F11R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F11R BINDING SITE, designated SEQ ID:16292, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38006] Another function of GAM1338 is therefore inhibition of F11R (Accession NP_058642.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F11R.

[38007] F11R (Accession NP_653086.1) is another GAM1338 target gene, herein designated TARGET GENE. F11R BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by F11R,

corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F11R BINDING SITE, designated SEQ ID:16292, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38008] Another function of GAM1338 is therefore inhibition of F11R (Accession NP_653086.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F11R.

[38009] Coagulation factor ii (thrombin) receptor-like 3 (F2RL3, Accession NP_003941.1) is another GAM1338 target gene, herein designated TARGET GENE. F2RL3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by F2RL3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F2RL3 BINDING SITE, designated SEQ ID:13324, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38010] Another function of GAM1338 is therefore inhibition of Coagulation factor ii (thrombin) receptor-like 3 (F2RL3,

Accession NP_003941.1), a gene which Protease- activated receptor 4; G protein- coupled receptor that increases phosphoinositide hydrolysis. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F2RL3.

[38011] The function of F2RL3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM72.1.Coagulation factor iii (thromboplastin, tissue factor) (F3, Accession NP_001984.1) is another GAM1338 target gene, herein designated TARGET GENE. F3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by F3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F3 BINDING SITE, designated SEQ ID:15547, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38012] Another function of GAM1338 is therefore inhibition of Coagulation factor iii (thromboplastin, tissue factor) (F3, Accession NP_001984.1), a gene which functions in normal hemostasis. Accordingly, utilities of GAM1338 include

diagnosis, prevention and treatment of diseases and clinical conditions associated with F3.

[38013] The function of F3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Coagulation factor v (proaccelerin, labile factor) (F5, Accession NP_000121.1) is another GAM1338 target gene, herein designated TARGET GENE. F5 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by F5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F5 BINDING SITE, designated SEQ ID:4594, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38014] Another function of GAM1338 is therefore inhibition of Coagulation factor v (proaccelerin, labile factor) (F5, Accession NP_000121.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with F5.

[38015] Coagulation factor viii-associated (intronic transcript) (F8A, Accession NP_036283.2) is another GAM1338 target

gene, herein designated TARGET GENE. F8A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by F8A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of F8A BINDING SITE, designated SEQ ID:16334, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38016] Another function of GAM1338 is therefore inhibition of Coagulation factor viii-associated (intronic transcript) (F8A, Accession NP_036283.2), a gene which has a possible housekeeping role. and therefore may be associated with Huntington disease. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Huntington disease., and of other diseases and clinical conditions associated with F8A.

[38017] The function of F8A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM689.1.Family with sequence similarity 13, member a1 (FAM13A1, Accession NP_055698.1) is another GAM1338 target gene, herein designated TARGET GENE.

FAM13A1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FAM13A1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FAM13A1 BINDING SITE, designated SEQ ID:17686, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38018] Another function of GAM1338 is therefore inhibition of Family with sequence similarity 13, member a1 (FAM13A1, Accession NP_055698.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FAM13A1.

[38019] Fanconi anemia, complementation group e (FANCE, Accession NP_068741.1) is another GAM1338 target gene, herein designated TARGET GENE. FANCE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FANCE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FANCE BINDING SITE, designated SEQ ID:16751, to the nucleotide sequence of

GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38020] Another function of GAM1338 is therefore inhibition of Fanconi anemia, complementation group e (FANCE, Accession NP_068741.1), a gene which is a possible regulator of lymphocyte and platelet function. and therefore is associated with Fanconi anemia, complementation group e. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Fanconi anemia, complementation group e., and of other diseases and clinical conditions associated with FANCE.

[38021] The function of FANCE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Fanconi anemia, complementation group f (FANCF, Accession NP_073562.1) is another GAM1338 target gene, herein designated TARGET GENE. FANCF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FANCF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FANCF BINDING SITE, designated SEQ ID:14445, to the nu-

cleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38022] Another function of GAM1338 is therefore inhibition of Fanconi anemia, complementation group f (FANCF, Accession NP_073562.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FANCF.

[38023] F-box and leucine-rich repeat protein 7 (FBXL7, Accession NP_036436.1) is another GAM1338 target gene, herein designated TARGET GENE. FBXL7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FBXL7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FBXL7 BINDING SITE, designated SEQ ID:10986, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38024] Another function of GAM1338 is therefore inhibition of F-box and leucine-rich repeat protein 7 (FBXL7, Accession NP_036436.1), a gene which may be involved in in phosphorylation- dependent ubiquitination. Accordingly, utilities of GAM1338 include diagnosis, prevention and treat-

ment of diseases and clinical conditions associated with FBXL7.

[38025] The function of FBXL7 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM40.1.Fc fragment of iga, receptor for (FCAR, Accession NP_001991.1) is another GAM1338 target gene, herein designated TARGET GENE. FCAR BINDING SITE1 through FCAR BINDING SITE3 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by FCAR, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FCAR BINDING SITE1 through FCAR BINDING SITE3, designated SEQ ID:10505, SEQ ID:18209 and SEQ ID:18209 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38026] Another function of GAM1338 is therefore inhibition of Fc fragment of iga, receptor for (FCAR, Accession NP_001991.1), a gene which binds to the fc region of immunoglobulins alpha and mediates several functions including cytokine production. and therefore may be associ-

ated with Iga nephropathy. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Iga nephropathy., and of other diseases and clinical conditions associated with FCAR.

[38027] The function of FCAR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Fc fragment of iga, receptor for (FCAR, Accession NP_579812.1) is another GAM1338 target gene, herein designated TARGET GENE. FCAR BINDING SITE1 through FCAR BINDING SITE3 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by FCAR, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FCAR BINDING SITE1 through FCAR BINDING SITE3, designated SEQ ID:18209, SEQ ID:441 and SEQ ID:18209 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38028] Another function of GAM1338 is therefore inhibition of Fc fragment of iga, receptor for (FCAR, Accession NP_579812.1), a gene which binds to the fc region of im-

munoglobulins alpha and mediates several functions including cytokine production. and therefore may be associated with Iga nephropathy. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Iga nephropathy., and of other diseases and clinical conditions associated with FCAR.

[38029] The function of FCAR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Fc fragment of iga, receptor for (FCAR, Accession NP_579813.1) is another GAM1338 target gene, herein designated TARGET GENE. FCAR BINDING SITE1 through FCAR BINDING SITE3 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by FCAR, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FCAR BINDING SITE1 through FCAR BINDING SITE3, designated SEQ ID:441, SEQ ID:18209 and SEQ ID:18209 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38030] Another function of GAM1338 is therefore inhibition of Fc

fragment of iga, receptor for (FCAR, Accession NP_579813.1), a gene which binds to the fc region of immunoglobulins alpha and mediates several functions including cytokine production. and therefore may be associated with Iga nephropathy. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Iga nephropathy., and of other diseases and clinical conditions associated with FCAR.

[38031] The function of FCAR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Fc fragment of iga, receptor for (FCAR, Accession NP_579811.1) is another GAM1338 target gene, herein designated TARGET GENE. FCAR BINDING SITE1 through FCAR BINDING SITE3 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by FCAR, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FCAR BINDING SITE1 through FCAR BINDING SITE3, designated SEQ ID:18209, SEQ ID:10188 and SEQ ID:1759 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA,

also designated SEQ ID:360.

[38032] Another function of GAM1338 is therefore inhibition of Fc fragment of iga, receptor for (FCAR, Accession NP_579811.1), a gene which binds to the fc region of immunoglobulins alpha and mediates several functions including cytokine production. and therefore may be associated with Iga nephropathy. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Iga nephropathy., and of other diseases and clinical conditions associated with FCAR.

[38033] The function of FCAR and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM136.1.Fer-1-like 4 (c. elegans) (FER1L4, Accession XP_300246.1) is another GAM1338 target gene, herein designated TARGET GENE. FER1L4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FER1L4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FER1L4 BINDING SITE, designated SEQ ID:1759, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ

ID:360.

[38034] Another function of GAM1338 is therefore inhibition of Fer-1-like 4 (c. elegans) (FER1L4, Accession XP_300246.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FER1L4.

[38035] Fgd1 family, member 2 (FGD2, Accession NP_775829.1) is another GAM1338 target gene, herein designated TARGET GENE. FGD2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FGD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGD2 BINDING SITE, designated SEQ ID:14487, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38036] Another function of GAM1338 is therefore inhibition of Fgd1 family, member 2 (FGD2, Accession NP_775829.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGD2.

[38037] Fibroblast growth factor 5 (FGF5, Accession NP_149134.1) is another GAM1338 target gene, herein designated TAR-

GET GENE. FGF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FGF5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGF5 BINDING SITE, designated SEQ ID:3375, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38038] Another function of GAM1338 is therefore inhibition of Fibroblast growth factor 5 (FGF5, Accession NP_149134.1), a gene which induces transformation and may regulate neuronal differentiation. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGF5.

[38039] The function of FGF5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM106.1.Fibroblast growth factor 5 (FGF5, Accession NP_004455.1) is another GAM1338 target gene, herein designated TARGET GENE. FGF5 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FGF5, corresponding

to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FGF5 BINDING SITE, designated SEQ ID:3375, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38040] Another function of GAM1338 is therefore inhibition of Fibroblast growth factor 5 (FGF5, Accession NP_004455.1), a gene which induces transformation and may regulate neuronal differentiation. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FGF5.

[38041] The function of FGF5 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM106.1.Four and a half lim domains 2 (FHL2, Accession NP_001441.2) is another GAM1338 target gene, herein designated TARGET GENE. FHL2 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FHL2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FHL2 BINDING SITE,

designated SEQ ID:19820, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38042] Another function of GAM1338 is therefore inhibition of Four and a half lim domains 2 (FHL2, Accession NP_001441.2), a gene which Contains four LIM domains and an additional zinc finger. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FHL2.

[38043] The function of FHL2 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.FISH (Accession NP_055446.1) is another GAM1338 target gene, herein designated TARGET GENE. FISH BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FISH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FISH BINDING SITE, designated SEQ ID:16564, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38044] Another function of GAM1338 is therefore inhibition of

FISH (Accession NP_055446.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FISH.

[38045] Fk506 binding protein 9, 63 kda (FKBP9, Accession NP_009201.1) is another GAM1338 target gene, herein designated TARGET GENE. FKBP9 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FKBP9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FKBP9 BINDING SITE, designated SEQ ID:2718, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38046] Another function of GAM1338 is therefore inhibition of Fk506 binding protein 9, 63 kda (FKBP9, Accession NP_009201.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FKBP9.

[38047] FLJ00060 (Accession XP_028154.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ00060 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ00060, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ00060 BINDING SITE, designated SEQ ID:13800, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38048] Another function of GAM1338 is therefore inhibition of FLJ00060 (Accession XP_028154.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ00060.

[38049] FLJ10101 (Accession NP_078994.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ10101 BINDING SITE1 and FLJ10101 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ10101, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10101 BINDING SITE1 and FLJ10101 BINDING SITE2, designated SEQ ID:10153 and SEQ ID:9878 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38050] Another function of GAM1338 is therefore inhibition of FLJ10101 (Accession NP_078994.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10101.

[38051] FLJ10298 (Accession NP_060520.2) is another GAM1338 target gene, herein designated TARGET GENE. FLJ10298 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10298, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10298 BINDING SITE, designated SEQ ID:468, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38052] Another function of GAM1338 is therefore inhibition of FLJ10298 (Accession NP_060520.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10298.

[38053] FLJ10346 (Accession NP_060535.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ10346 BINDING SITE is a target binding site found in the 5` un-

translated region of mRNA encoded by FLJ10346, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10346 BINDING SITE, designated SEQ ID:7836, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38054] Another function of GAM1338 is therefore inhibition of FLJ10346 (Accession NP_060535.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10346.

[38055] FLJ10520 (Accession NP_060594.2) is another GAM1338 target gene, herein designated TARGET GENE. FLJ10520 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10520, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10520 BINDING SITE, designated SEQ ID:8795, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38056] Another function of GAM1338 is therefore inhibition of

FLJ10520 (Accession NP_060594.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10520.

[38057] FLJ10535 (Accession NP_060599.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ10535 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10535, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10535 BINDING SITE, designated SEQ ID:10633, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38058] Another function of GAM1338 is therefore inhibition of FLJ10535 (Accession NP_060599.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10535.

[38059] FLJ10560 (Accession NP_060608.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ10560 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10560, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10560 BINDING SITE, designated SEQ ID:16115, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38060] Another function of GAM1338 is therefore inhibition of FLJ10560 (Accession NP_060608.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10560.

[38061] FLJ10569 (Accession NP_060612.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ10569 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ10569, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10569 BINDING SITE, designated SEQ ID:7662, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38062] Another function of GAM1338 is therefore inhibition of FLJ10569 (Accession NP_060612.1) . Accordingly, utilities

of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10569.

[38063] FLJ10640 (Accession NP_061896.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ10640 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ10640, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10640 BINDING SITE, designated SEQ ID:16789, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38064] Another function of GAM1338 is therefore inhibition of FLJ10640 (Accession NP_061896.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10640.

[38065] FLJ10713 (Accession NP_060659.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ10713 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10713, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10713 BINDING SITE, designated SEQ ID:12092, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38066] Another function of GAM1338 is therefore inhibition of FLJ10713 (Accession NP_060659.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10713.

[38067] FLJ10743 (Accession NP_060671.2) is another GAM1338 target gene, herein designated TARGET GENE. FLJ10743 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10743, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10743 BINDING SITE, designated SEQ ID:2269, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38068] Another function of GAM1338 is therefore inhibition of FLJ10743 (Accession NP_060671.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ10743.

[38069] FLJ10846 (Accession NP_060711.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ10846 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10846, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10846 BINDING SITE, designated SEQ ID:13800, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38070] Another function of GAM1338 is therefore inhibition of FLJ10846 (Accession NP_060711.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10846.

[38071] FLJ10847 (Accession NP_060712.2) is another GAM1338 target gene, herein designated TARGET GENE. FLJ10847 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10847, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ10847 BINDING SITE, designated SEQ ID:18108, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38072] Another function of GAM1338 is therefore inhibition of FLJ10847 (Accession NP_060712.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10847.

[38073] FLJ10901 (Accession NP_060735.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ10901 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10901, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10901 BINDING SITE, designated SEQ ID:13292, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38074] Another function of GAM1338 is therefore inhibition of FLJ10901 (Accession NP_060735.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ10901.

[38075] FLJ10922 (Accession NP_060743.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ10922 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ10922, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ10922 BINDING SITE, designated SEQ ID:6574, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38076] Another function of GAM1338 is therefore inhibition of FLJ10922 (Accession NP_060743.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ10922.

[38077] FLJ11274 (Accession NP_060845.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ11274 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ11274, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ11274 BINDING SITE, designated SEQ ID:7307, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38078] Another function of GAM1338 is therefore inhibition of FLJ11274 (Accession NP_060845.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11274.

[38079] FLJ11323 (Accession NP_060860.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ11323 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by FLJ11323, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11323 BINDING SITE, designated SEQ ID:13280, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38080] Another function of GAM1338 is therefore inhibition of FLJ11323 (Accession NP_060860.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ11323.

[38081] FLJ11467 (Accession NP_079239.2) is another GAM1338 target gene, herein designated TARGET GENE. FLJ11467 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11467, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11467 BINDING SITE, designated SEQ ID:9552, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38082] Another function of GAM1338 is therefore inhibition of FLJ11467 (Accession NP_079239.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11467.

[38083] FLJ11710 (Accession NP_079122.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ11710 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11710, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ11710 BINDING SITE, designated SEQ ID:6034, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38084] Another function of GAM1338 is therefore inhibition of FLJ11710 (Accession NP_079122.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11710.

[38085] FLJ11715 (Accession NP_078840.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ11715 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11715, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11715 BINDING SITE, designated SEQ ID:4281, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38086] Another function of GAM1338 is therefore inhibition of FLJ11715 (Accession NP_078840.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11715.

[38087] FLJ11783 (Accession NP_079167.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ11783 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11783, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11783 BINDING SITE, designated SEQ ID:11128, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38088] Another function of GAM1338 is therefore inhibition of FLJ11783 (Accession NP_079167.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11783.

[38089] FLJ11800 (Accession NP_079250.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ11800 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ11800, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ11800 BINDING SITE, designated SEQ ID:17222, to the

nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38090] Another function of GAM1338 is therefore inhibition of FLJ11800 (Accession NP_079250.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ11800.

[38091] FLJ12363 (Accession NP_115543.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ12363 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12363, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12363 BINDING SITE, designated SEQ ID:14486, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38092] Another function of GAM1338 is therefore inhibition of FLJ12363 (Accession NP_115543.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12363.

[38093] FLJ12409 (Accession NP_079381.1) is another GAM1338

target gene, herein designated TARGET GENE. FLJ12409 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12409, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12409 BINDING SITE, designated SEQ ID:19506, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38094] Another function of GAM1338 is therefore inhibition of FLJ12409 (Accession NP_079381.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12409.

[38095] FLJ12572 (Accession NP_075056.2) is another GAM1338 target gene, herein designated TARGET GENE. FLJ12572 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ12572, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12572 BINDING SITE, designated SEQ ID:14282, to the nucleotide sequence of GAM1338 RNA, herein designated

GAM RNA, also designated SEQ ID:360.

[38096] Another function of GAM1338 is therefore inhibition of FLJ12572 (Accession NP_075056.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12572.

[38097] FLJ12586 (Accession NP_078896.2) is another GAM1338 target gene, herein designated TARGET GENE. FLJ12586 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ12586, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12586 BINDING SITE, designated SEQ ID:13509, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38098] Another function of GAM1338 is therefore inhibition of FLJ12586 (Accession NP_078896.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12586.

[38099] FLJ12649 (Accession XP_291344.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ12649

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12649, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12649 BINDING SITE, designated SEQ ID:1963, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38100] Another function of GAM1338 is therefore inhibition of FLJ12649 (Accession XP_291344.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12649.

[38101] FLJ12687 (Accession NP_079193.2) is another GAM1338 target gene, herein designated TARGET GENE. FLJ12687 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12687, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12687 BINDING SITE, designated SEQ ID:4553, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38102] Another function of GAM1338 is therefore inhibition of FLJ12687 (Accession NP_079193.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12687.

[38103] FLJ12787 (Accession NP_115551.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ12787 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12787, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12787 BINDING SITE, designated SEQ ID:8076, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38104] Another function of GAM1338 is therefore inhibition of FLJ12787 (Accession NP_115551.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12787.

[38105] FLJ12800 (Accession NP_075054.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ12800 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by FLJ12800, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12800 BINDING SITE, designated SEQ ID:3651, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38106] Another function of GAM1338 is therefore inhibition of FLJ12800 (Accession NP_075054.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12800.

[38107] FLJ12888 (Accession NP_079221.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ12888 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12888, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12888 BINDING SITE, designated SEQ ID:1302, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38108] Another function of GAM1338 is therefore inhibition of

FLJ12888 (Accession NP_079221.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12888.

[38109] FLJ12903 (Accession NP_073590.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ12903 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12903, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12903 BINDING SITE, designated SEQ ID:15276, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38110] Another function of GAM1338 is therefore inhibition of FLJ12903 (Accession NP_073590.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12903.

[38111] FLJ12960 (Accession NP_078914.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ12960 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12960, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12960 BINDING SITE, designated SEQ ID:3109, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38112] Another function of GAM1338 is therefore inhibition of FLJ12960 (Accession NP_078914.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12960.

[38113] FLJ12973 (Accession NP_079184.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ12973 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12973, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12973 BINDING SITE, designated SEQ ID:14027, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38114] Another function of GAM1338 is therefore inhibition of FLJ12973 (Accession NP_079184.1) . Accordingly, utilities

of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12973.

[38115] FLJ12975 (Accession NP_079085.2) is another GAM1338 target gene, herein designated TARGET GENE. FLJ12975 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12975, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12975 BINDING SITE, designated SEQ ID:836, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38116] Another function of GAM1338 is therefore inhibition of FLJ12975 (Accession NP_079085.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12975.

[38117] FLJ12986 (Accession XP_290685.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ12986 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ12986, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ12986 BINDING SITE, designated SEQ ID:6642, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38118] Another function of GAM1338 is therefore inhibition of FLJ12986 (Accession XP_290685.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ12986.

[38119] FLJ13072 (Accession XP_117117.2) is another GAM1338 target gene, herein designated TARGET GENE. FLJ13072 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13072, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13072 BINDING SITE, designated SEQ ID:6870, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38120] Another function of GAM1338 is therefore inhibition of FLJ13072 (Accession XP_117117.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ13072.

[38121] FLJ13114 (Accession NP_078817.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ13114 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13114, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13114 BINDING SITE, designated SEQ ID:7621, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38122] Another function of GAM1338 is therefore inhibition of FLJ13114 (Accession NP_078817.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13114.

[38123] FLJ13188 (Accession NP_071346.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ13188 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13188, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ13188 BINDING SITE, designated SEQ ID:12816, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38124] Another function of GAM1338 is therefore inhibition of FLJ13188 (Accession NP_071346.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13188.

[38125] FLJ13189 (Accession NP_079158.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ13189 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13189, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13189 BINDING SITE, designated SEQ ID:11334, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38126] Another function of GAM1338 is therefore inhibition of FLJ13189 (Accession NP_079158.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ13189.

[38127] FLJ13197 (Accession NP_078890.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ13197 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13197, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13197 BINDING SITE, designated SEQ ID:7946, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38128] Another function of GAM1338 is therefore inhibition of FLJ13197 (Accession NP_078890.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13197.

[38129] FLJ13263 (Accession NP_079401.2) is another GAM1338 target gene, herein designated TARGET GENE. FLJ13263 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13263, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ13263 BINDING SITE, designated SEQ ID:1789, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38130] Another function of GAM1338 is therefore inhibition of FLJ13263 (Accession NP_079401.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13263.

[38131] FLJ13456 (Accession XP_038291.5) is another GAM1338 target gene, herein designated TARGET GENE. FLJ13456 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13456, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13456 BINDING SITE, designated SEQ ID:5409, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38132] Another function of GAM1338 is therefore inhibition of FLJ13456 (Accession XP_038291.5) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13456.

[38133] FLJ13590 (Accession NP_079116.2) is another GAM1338 target gene, herein designated TARGET GENE. FLJ13590 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ13590, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13590 BINDING SITE, designated SEQ ID:6935, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38134] Another function of GAM1338 is therefore inhibition of FLJ13590 (Accession NP_079116.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13590.

[38135] FLJ13769 (Accession NP_079288.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ13769 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13769, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13769 BINDING SITE, designated SEQ ID:4401, to the

nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38136] Another function of GAM1338 is therefore inhibition of FLJ13769 (Accession NP_079288.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13769.

[38137] FLJ13910 (Accession NP_073617.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ13910 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ13910, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13910 BINDING SITE, designated SEQ ID:8349, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38138] Another function of GAM1338 is therefore inhibition of FLJ13910 (Accession NP_073617.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13910.

[38139] FLJ13984 (Accession NP_079046.1) is another GAM1338

target gene, herein designated TARGET GENE. FLJ13984 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ13984, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ13984 BINDING SITE, designated SEQ ID:16972, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38140] Another function of GAM1338 is therefore inhibition of FLJ13984 (Accession NP_079046.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ13984.

[38141] FLJ14327 (Accession NP_079188.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ14327 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14327, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14327 BINDING SITE, designated SEQ ID:14346, to the nucleotide sequence of GAM1338 RNA, herein designated

GAM RNA, also designated SEQ ID:360.

[38142] Another function of GAM1338 is therefore inhibition of FLJ14327 (Accession NP_079188.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14327.

[38143] FLJ14351 (Accession NP_079008.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ14351 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14351, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14351 BINDING SITE, designated SEQ ID:8244, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38144] Another function of GAM1338 is therefore inhibition of FLJ14351 (Accession NP_079008.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14351.

[38145] FLJ14442 (Accession NP_116174.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ14442

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14442, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14442 BINDING SITE, designated SEQ ID:16517, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38146] Another function of GAM1338 is therefore inhibition of FLJ14442 (Accession NP_116174.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14442.

[38147] FLJ14803 (Accession NP_116231.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ14803 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14803, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14803 BINDING SITE, designated SEQ ID:3409, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38148] Another function of GAM1338 is therefore inhibition of FLJ14803 (Accession NP_116231.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14803.

[38149] FLJ14957 (Accession NP_116255.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ14957 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ14957, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ14957 BINDING SITE, designated SEQ ID:13179, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38150] Another function of GAM1338 is therefore inhibition of FLJ14957 (Accession NP_116255.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ14957.

[38151] FLJ20045 (Accession NP_060108.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ20045 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by FLJ20045, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20045 BINDING SITE, designated SEQ ID:19070, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38152] Another function of GAM1338 is therefore inhibition of FLJ20045 (Accession NP_060108.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20045.

[38153] FLJ20079 (Accession NP_060126.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ20079 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20079, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20079 BINDING SITE, designated SEQ ID:6780, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38154] Another function of GAM1338 is therefore inhibition of

FLJ20079 (Accession NP_060126.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20079.

[38155] FLJ20095 (Accession NP_060136.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ20095 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20095, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20095 BINDING SITE, designated SEQ ID:13800, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38156] Another function of GAM1338 is therefore inhibition of FLJ20095 (Accession NP_060136.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20095.

[38157] FLJ20136 (Accession NP_060154.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ20136 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20136, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20136 BINDING SITE, designated SEQ ID:15523, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38158] Another function of GAM1338 is therefore inhibition of FLJ20136 (Accession NP_060154.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20136.

[38159] FLJ20147 (Accession NP_060157.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ20147 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20147, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20147 BINDING SITE, designated SEQ ID:11745, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38160] Another function of GAM1338 is therefore inhibition of FLJ20147 (Accession NP_060157.1) . Accordingly, utilities

of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20147.

[38161] FLJ20245 (Accession NP_060193.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ20245 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20245, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20245 BINDING SITE, designated SEQ ID:19728, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38162] Another function of GAM1338 is therefore inhibition of FLJ20245 (Accession NP_060193.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20245.

[38163] FLJ20308 (Accession NP_060228.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ20308 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20308, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20308 BINDING SITE, designated SEQ ID:5707, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38164] Another function of GAM1338 is therefore inhibition of FLJ20308 (Accession NP_060228.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20308.

[38165] FLJ20309 (Accession NP_060229.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ20309 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20309, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20309 BINDING SITE, designated SEQ ID:2478, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38166] Another function of GAM1338 is therefore inhibition of FLJ20309 (Accession NP_060229.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ20309.

[38167] FLJ20320 (Accession NP_060235.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ20320 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20320, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20320 BINDING SITE, designated SEQ ID:9740, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38168] Another function of GAM1338 is therefore inhibition of FLJ20320 (Accession NP_060235.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20320.

[38169] FLJ20502 (Accession NP_060315.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ20502 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20502, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ20502 BINDING SITE, designated SEQ ID:2719, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38170] Another function of GAM1338 is therefore inhibition of FLJ20502 (Accession NP_060315.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20502.

[38171] FLJ20511 (Accession NP_060323.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ20511 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20511, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20511 BINDING SITE, designated SEQ ID:969, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38172] Another function of GAM1338 is therefore inhibition of FLJ20511 (Accession NP_060323.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ20511.

[38173] FLJ20671 (Accession NP_060394.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ20671 BINDING SITE1 and FLJ20671 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ20671, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20671 BINDING SITE1 and FLJ20671 BINDING SITE2, designated SEQ ID:13745 and SEQ ID:10861 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38174] Another function of GAM1338 is therefore inhibition of FLJ20671 (Accession NP_060394.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20671.

[38175] FLJ20700 (Accession NP_060402.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ20700 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20700, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20700 BINDING SITE, designated SEQ ID:20156, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38176] Another function of GAM1338 is therefore inhibition of FLJ20700 (Accession NP_060402.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20700.

[38177] FLJ20813 (Accession NP_060431.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ20813 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ20813, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20813 BINDING SITE, designated SEQ ID:18464, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38178] Another function of GAM1338 is therefore inhibition of FLJ20813 (Accession NP_060431.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ20813.

[38179] FLJ20886 (Accession NP_079475.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ20886 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ20886, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ20886 BINDING SITE, designated SEQ ID:6236, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38180] Another function of GAM1338 is therefore inhibition of FLJ20886 (Accession NP_079475.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ20886.

[38181] FLJ21302 (Accession NP_075052.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ21302 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ21302, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of FLJ21302 BINDING SITE, designated SEQ ID:11446, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38182] Another function of GAM1338 is therefore inhibition of FLJ21302 (Accession NP_075052.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21302.

[38183] FLJ21603 (Accession NP_079038.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ21603 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ21603, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21603 BINDING SITE, designated SEQ ID:11662, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38184] Another function of GAM1338 is therefore inhibition of FLJ21603 (Accession NP_079038.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

FLJ21603.

[38185] FLJ21673 (Accession NP_112160.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ21673 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ21673, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ21673 BINDING SITE, designated SEQ ID:1926, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38186] Another function of GAM1338 is therefore inhibition of FLJ21673 (Accession NP_112160.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21673.

[38187] FLJ21841 (Accession NP_078885.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ21841 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ21841, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of

FLJ21841 BINDING SITE, designated SEQ ID:5009, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38188] Another function of GAM1338 is therefore inhibition of FLJ21841 (Accession NP_078885.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ21841.

[38189] FLJ22029 (Accession NP_079225.2) is another GAM1338 target gene, herein designated TARGET GENE. FLJ22029 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ22029, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22029 BINDING SITE, designated SEQ ID:10676, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38190] Another function of GAM1338 is therefore inhibition of FLJ22029 (Accession NP_079225.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22029.

[38191] FLJ22167 (Accession NP_078809.2) is another GAM1338 target gene, herein designated TARGET GENE. FLJ22167 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ22167, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22167 BINDING SITE, designated SEQ ID:2733, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38192] Another function of GAM1338 is therefore inhibition of FLJ22167 (Accession NP_078809.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22167.

[38193] FLJ22329 (Accession NP_078932.2) is another GAM1338 target gene, herein designated TARGET GENE. FLJ22329 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ22329, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22329 BINDING SITE, designated SEQ ID:10803, to the

nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38194] Another function of GAM1338 is therefore inhibition of FLJ22329 (Accession NP_078932.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22329.

[38195] FLJ22531 (Accession NP_078926.2) is another GAM1338 target gene, herein designated TARGET GENE. FLJ22531 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ22531, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22531 BINDING SITE, designated SEQ ID:3548, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38196] Another function of GAM1338 is therefore inhibition of FLJ22531 (Accession NP_078926.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22531.

[38197] FLJ22965 (Accession NP_071384.1) is another GAM1338

target gene, herein designated TARGET GENE. FLJ22965 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ22965, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ22965 BINDING SITE, designated SEQ ID:9754, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38198] Another function of GAM1338 is therefore inhibition of FLJ22965 (Accession NP_071384.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ22965.

[38199] FLJ23053 (Accession NP_075058.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ23053 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23053, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23053 BINDING SITE, designated SEQ ID:16973, to the nucleotide sequence of GAM1338 RNA, herein designated

GAM RNA, also designated SEQ ID:360.

[38200] Another function of GAM1338 is therefore inhibition of FLJ23053 (Accession NP_075058.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23053.

[38201] FLJ23186 (Accession NP_078892.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ23186 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23186, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23186 BINDING SITE, designated SEQ ID:10010, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38202] Another function of GAM1338 is therefore inhibition of FLJ23186 (Accession NP_078892.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23186.

[38203] FLJ23263 (Accession NP_079391.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ23263

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ23263, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23263 BINDING SITE, designated SEQ ID:13801, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38204] Another function of GAM1338 is therefore inhibition of FLJ23263 (Accession NP_079391.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23263.

[38205] FLJ23356 (Accession NP_115613.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ23356 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23356, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23356 BINDING SITE, designated SEQ ID:14440, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38206] Another function of GAM1338 is therefore inhibition of FLJ23356 (Accession NP_115613.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23356.

[38207] FLJ23392 (Accession NP_079060.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ23392 BINDING SITE1 through FLJ23392 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by FLJ23392, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23392 BINDING SITE1 through FLJ23392 BINDING SITE3, designated SEQ ID:431, SEQ ID:4022 and SEQ ID:11425 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38208] Another function of GAM1338 is therefore inhibition of FLJ23392 (Accession NP_079060.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23392.

[38209] FLJ23416 (Accession NP_115614.1) is another GAM1338

target gene, herein designated TARGET GENE. FLJ23416 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23416, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23416 BINDING SITE, designated SEQ ID:4771, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38210] Another function of GAM1338 is therefore inhibition of FLJ23416 (Accession NP_115614.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23416.

[38211] FLJ23556 (Accession NP_079156.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ23556 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23556, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23556 BINDING SITE, designated SEQ ID:436, to the nucleotide sequence of GAM1338 RNA, herein designated

GAM RNA, also designated SEQ ID:360.

[38212] Another function of GAM1338 is therefore inhibition of FLJ23556 (Accession NP_079156.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23556.

[38213] FLJ23563 (Accession XP_041701.4) is another GAM1338 target gene, herein designated TARGET GENE. FLJ23563 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ23563, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ23563 BINDING SITE, designated SEQ ID:12755, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38214] Another function of GAM1338 is therefore inhibition of FLJ23563 (Accession XP_041701.4) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ23563.

[38215] FLJ25795 (Accession NP_689633.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ25795

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ25795, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ25795 BINDING SITE, designated SEQ ID:18075, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38216] Another function of GAM1338 is therefore inhibition of FLJ25795 (Accession NP_689633.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ25795.

[38217] FLJ30507 (Accession NP_694555.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ30507 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ30507, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30507 BINDING SITE, designated SEQ ID:15050, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38218] Another function of GAM1338 is therefore inhibition of FLJ30507 (Accession NP_694555.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30507.

[38219] FLJ30532 (Accession NP_653325.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ30532 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ30532, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ30532 BINDING SITE, designated SEQ ID:15898, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38220] Another function of GAM1338 is therefore inhibition of FLJ30532 (Accession NP_653325.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ30532.

[38221] FLJ31139 (Accession NP_775928.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ31139 BINDING SITE1 through FLJ31139 BINDING SITE3 are target

binding sites found in untranslated regions of mRNA encoded by FLJ31139, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31139 BINDING SITE1 through FLJ31139 BINDING SITE3, designated SEQ ID:7279, SEQ ID:1817 and SEQ ID:19693 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38222] Another function of GAM1338 is therefore inhibition of FLJ31139 (Accession NP_775928.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31139.

[38223] FLJ31153 (Accession NP_653201.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ31153 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31153, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31153 BINDING SITE, designated SEQ ID:13799, to the nucleotide sequence of GAM1338 RNA, herein designated

GAM RNA, also designated SEQ ID:360.

[38224] Another function of GAM1338 is therefore inhibition of FLJ31153 (Accession NP_653201.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31153.

[38225] FLJ31338 (Accession NP_689682.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ31338 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31338, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31338 BINDING SITE, designated SEQ ID:7114, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38226] Another function of GAM1338 is therefore inhibition of FLJ31338 (Accession NP_689682.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31338.

[38227] FLJ31393 (Accession NP_694569.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ31393

BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ31393, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31393 BINDING SITE, designated SEQ ID:7878, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38228] Another function of GAM1338 is therefore inhibition of FLJ31393 (Accession NP_694569.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31393.

[38229] FLJ31401 (Accession NP_689877.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ31401 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ31401, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31401 BINDING SITE, designated SEQ ID:11498, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38230] Another function of GAM1338 is therefore inhibition of FLJ31401 (Accession NP_689877.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31401.

[38231] FLJ31821 (Accession NP_694574.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ31821 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ31821, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ31821 BINDING SITE, designated SEQ ID:17212, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38232] Another function of GAM1338 is therefore inhibition of FLJ31821 (Accession NP_694574.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ31821.

[38233] FLJ32096 (Accession NP_776156.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ32096 BINDING SITE1 and FLJ32096 BINDING SITE2 are target

binding sites found in untranslated regions of mRNA encoded by FLJ32096, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32096 BINDING SITE1 and FLJ32096 BINDING SITE2, designated SEQ ID:11067 and SEQ ID:20189 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38234] Another function of GAM1338 is therefore inhibition of FLJ32096 (Accession NP_776156.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32096.

[38235] FLJ32130 (Accession NP_689671.2) is another GAM1338 target gene, herein designated TARGET GENE. FLJ32130 BINDING SITE1 through FLJ32130 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by FLJ32130, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32130 BINDING SITE1 through FLJ32130 BINDING SITE3, designated SEQ ID:17307, SEQ

ID:9100 and SEQ ID:5404 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38236] Another function of GAM1338 is therefore inhibition of FLJ32130 (Accession NP_689671.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32130.

[38237] FLJ32206 (Accession NP_689710.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ32206 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32206, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32206 BINDING SITE, designated SEQ ID:14825, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38238] Another function of GAM1338 is therefore inhibition of FLJ32206 (Accession NP_689710.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32206.

[38239] FLJ32499 (Accession NP_653208.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ32499 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32499, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32499 BINDING SITE, designated SEQ ID:2883, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38240] Another function of GAM1338 is therefore inhibition of FLJ32499 (Accession NP_653208.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32499.

[38241] FLJ32731 (Accession NP_689632.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ32731 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32731, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32731 BINDING SITE, designated SEQ ID:7308, to the

nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38242] Another function of GAM1338 is therefore inhibition of FLJ32731 (Accession NP_689632.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32731.

[38243] FLJ32803 (Accession NP_694584.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ32803 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32803, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32803 BINDING SITE, designated SEQ ID:7824, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38244] Another function of GAM1338 is therefore inhibition of FLJ32803 (Accession NP_694584.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32803.

[38245] FLJ32894 (Accession NP_653268.1) is another GAM1338

target gene, herein designated TARGET GENE. FLJ32894 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32894, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32894 BINDING SITE, designated SEQ ID:3716, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38246] Another function of GAM1338 is therefore inhibition of FLJ32894 (Accession NP_653268.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32894.

[38247] FLJ32932 (Accession NP_690873.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ32932 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ32932, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ32932 BINDING SITE, designated SEQ ID:4748, to the nucleotide sequence of GAM1338 RNA, herein designated

GAM RNA, also designated SEQ ID:360.

[38248] Another function of GAM1338 is therefore inhibition of FLJ32932 (Accession NP_690873.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ32932.

[38249] FLJ33318 (Accession NP_694961.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ33318 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ33318, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33318 BINDING SITE, designated SEQ ID:17978, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38250] Another function of GAM1338 is therefore inhibition of FLJ33318 (Accession NP_694961.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33318.

[38251] FLJ33505 (Accession NP_689530.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ33505

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ33505, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33505 BINDING SITE, designated SEQ ID:2450, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38252] Another function of GAM1338 is therefore inhibition of FLJ33505 (Accession NP_689530.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33505.

[38253] FLJ33655 (Accession NP_775912.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ33655 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ33655, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ33655 BINDING SITE, designated SEQ ID:6177, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38254] Another function of GAM1338 is therefore inhibition of FLJ33655 (Accession NP_775912.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ33655.

[38255] FLJ34817 (Accession NP_689516.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ34817 BINDING SITE1 and FLJ34817 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ34817, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ34817 BINDING SITE1 and FLJ34817 BINDING SITE2, designated SEQ ID:434 and SEQ ID:10174 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38256] Another function of GAM1338 is therefore inhibition of FLJ34817 (Accession NP_689516.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ34817.

[38257] FLJ34922 (Accession NP_689483.1) is another GAM1338

target gene, herein designated TARGET GENE. FLJ34922 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ34922, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ34922 BINDING SITE, designated SEQ ID:14214, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38258] Another function of GAM1338 is therefore inhibition of FLJ34922 (Accession NP_689483.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ34922.

[38259] FLJ34969 (Accession XP_114353.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ34969 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ34969, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ34969 BINDING SITE, designated SEQ ID:6348, to the nucleotide sequence of GAM1338 RNA, herein designated

GAM RNA, also designated SEQ ID:360.

[38260] Another function of GAM1338 is therefore inhibition of FLJ34969 (Accession XP_114353.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ34969.

[38261] FLJ35105 (Accession NP_689890.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ35105 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ35105, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35105 BINDING SITE, designated SEQ ID:6840, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38262] Another function of GAM1338 is therefore inhibition of FLJ35105 (Accession NP_689890.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ35105.

[38263] FLJ35681 (Accession NP_787096.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ35681

BINDING SITE1 and FLJ35681 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ35681, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35681 BINDING SITE1 and FLJ35681 BINDING SITE2, designated SEQ ID:3105 and SEQ ID:10703 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38264] Another function of GAM1338 is therefore inhibition of FLJ35681 (Accession NP_787096.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ35681.

[38265] FLJ35848 (Accession XP_290755.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ35848 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ35848, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ35848 BINDING SITE, designated SEQ ID:12720, to the

nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38266] Another function of GAM1338 is therefore inhibition of FLJ35848 (Accession XP_290755.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ35848.

[38267] FLJ36445 (Accession NP_694965.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ36445 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ36445, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ36445 BINDING SITE, designated SEQ ID:10632, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38268] Another function of GAM1338 is therefore inhibition of FLJ36445 (Accession NP_694965.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ36445.

[38269] FLJ37045 (Accession NP_787085.1) is another GAM1338

target gene, herein designated TARGET GENE. FLJ37045 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ37045, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37045 BINDING SITE, designated SEQ ID:6414, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38270] Another function of GAM1338 is therefore inhibition of FLJ37045 (Accession NP_787085.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37045.

[38271] FLJ37078 (Accession NP_694588.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ37078 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FLJ37078, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37078 BINDING SITE, designated SEQ ID:3106, to the nucleotide sequence of GAM1338 RNA, herein designated

GAM RNA, also designated SEQ ID:360.

[38272] Another function of GAM1338 is therefore inhibition of FLJ37078 (Accession NP_694588.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37078.

[38273] FLJ37266 (Accession NP_787088.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ37266 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ37266, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37266 BINDING SITE, designated SEQ ID:9900, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38274] Another function of GAM1338 is therefore inhibition of FLJ37266 (Accession NP_787088.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37266.

[38275] FLJ37300 (Accession NP_694941.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ37300

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ37300, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37300 BINDING SITE, designated SEQ ID:11542, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38276] Another function of GAM1338 is therefore inhibition of FLJ37300 (Accession NP_694941.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37300.

[38277] FLJ37433 (Accession NP_848612.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ37433 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ37433, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37433 BINDING SITE, designated SEQ ID:18178, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38278] Another function of GAM1338 is therefore inhibition of FLJ37433 (Accession NP_848612.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37433.

[38279] FLJ37543 (Accession NP_775938.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ37543 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ37543, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37543 BINDING SITE, designated SEQ ID:435, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38280] Another function of GAM1338 is therefore inhibition of FLJ37543 (Accession NP_775938.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37543.

[38281] FLJ37970 (Accession XP_290514.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ37970 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by FLJ37970, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ37970 BINDING SITE, designated SEQ ID:13645, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38282] Another function of GAM1338 is therefore inhibition of FLJ37970 (Accession XP_290514.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ37970.

[38283] FLJ38101 (Accession NP_694993.2) is another GAM1338 target gene, herein designated TARGET GENE. FLJ38101 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ38101, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38101 BINDING SITE, designated SEQ ID:6516, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38284] Another function of GAM1338 is therefore inhibition of

FLJ38101 (Accession NP_694993.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38101.

[38285] FLJ38149 (Accession XP_091919.5) is another GAM1338 target gene, herein designated TARGET GENE. FLJ38149 BINDING SITE1 through FLJ38149 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by FLJ38149, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38149 BINDING SITE1 through FLJ38149 BINDING SITE3, designated SEQ ID:2644, SEQ ID:11661 and SEQ ID:12581 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38286] Another function of GAM1338 is therefore inhibition of FLJ38149 (Accession XP_091919.5) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38149.

[38287] FLJ38281 (Accession NP_689814.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ38281

BINDING SITE1 and FLJ38281 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ38281, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38281 BINDING SITE1 and FLJ38281 BINDING SITE2, designated SEQ ID:17962 and SEQ ID:19457 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38288] Another function of GAM1338 is therefore inhibition of FLJ38281 (Accession NP_689814.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38281.

[38289] FLJ38607 (Accession NP_689867.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ38607 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ38607, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38607 BINDING SITE, designated SEQ ID:3109, to the

nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38290] Another function of GAM1338 is therefore inhibition of FLJ38607 (Accession NP_689867.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38607.

[38291] FLJ38792 (Accession NP_848615.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ38792 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ38792, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38792 BINDING SITE, designated SEQ ID:18182, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38292] Another function of GAM1338 is therefore inhibition of FLJ38792 (Accession NP_848615.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38792.

[38293] FLJ38819 (Accession NP_665872.1) is another GAM1338

target gene, herein designated TARGET GENE. FLJ38819 BINDING SITE1 and FLJ38819 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ38819, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ38819 BINDING SITE1 and FLJ38819 BINDING SITE2, designated SEQ ID:3726 and SEQ ID:3017 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38294] Another function of GAM1338 is therefore inhibition of FLJ38819 (Accession NP_665872.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38819.

[38295] FLJ38991 (Accession NP_776188.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ38991 BINDING SITE1 and FLJ38991 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ38991, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of FLJ38991 BINDING SITE1 and FLJ38991 BINDING SITE2, designated SEQ ID:5383 and SEQ ID:7191 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38296] Another function of GAM1338 is therefore inhibition of FLJ38991 (Accession NP_776188.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ38991.

[38297] FLJ39415 (Accession NP_775952.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ39415 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ39415, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39415 BINDING SITE, designated SEQ ID:17781, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38298] Another function of GAM1338 is therefore inhibition of FLJ39415 (Accession NP_775952.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with FLJ39415.

[38299] FLJ39599 (Accession NP_776164.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ39599 BINDING SITE1 through FLJ39599 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by FLJ39599, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39599 BINDING SITE1 through FLJ39599 BINDING SITE3, designated SEQ ID:16019, SEQ ID:16634 and SEQ ID:7948 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38300] Another function of GAM1338 is therefore inhibition of FLJ39599 (Accession NP_776164.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39599.

[38301] FLJ39639 (Accession XP_290687.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ39639 BINDING SITE1 and FLJ39639 BINDING SITE2 are target binding sites found in untranslated regions of mRNA en-

coded by FLJ39639, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39639 BINDING SITE1 and FLJ39639 BINDING SITE2, designated SEQ ID:7663 and SEQ ID:13371 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38302] Another function of GAM1338 is therefore inhibition of FLJ39639 (Accession XP_290687.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39639.

[38303] FLJ39821 (Accession NP_775971.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ39821 BINDING SITE1 and FLJ39821 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FLJ39821, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ39821 BINDING SITE1 and FLJ39821 BINDING SITE2, designated SEQ ID:8171 and SEQ ID:14284 respectively, to the nucleotide sequence of

GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38304] Another function of GAM1338 is therefore inhibition of FLJ39821 (Accession NP_775971.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ39821.

[38305] FLJ90231 (Accession NP_775852.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ90231 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ90231, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ90231 BINDING SITE, designated SEQ ID:18854, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38306] Another function of GAM1338 is therefore inhibition of FLJ90231 (Accession NP_775852.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ90231.

[38307] FLJ90586 (Accession NP_699176.1) is another GAM1338

target gene, herein designated TARGET GENE. FLJ90586 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ90586, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ90586 BINDING SITE, designated SEQ ID:3767, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38308] Another function of GAM1338 is therefore inhibition of FLJ90586 (Accession NP_699176.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ90586.

[38309] FLJ90723 (Accession NP_787115.1) is another GAM1338 target gene, herein designated TARGET GENE. FLJ90723 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FLJ90723, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FLJ90723 BINDING SITE, designated SEQ ID:16986, to the nucleotide sequence of GAM1338 RNA, herein designated

GAM RNA, also designated SEQ ID:360.

[38310] Another function of GAM1338 is therefore inhibition of FLJ90723 (Accession NP_787115.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FLJ90723.

[38311] Formin binding protein 1 (FNBP1, Accession XP_052666.3) is another GAM1338 target gene, herein designated TARGET GENE. FNBP1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FNBP1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FNBP1 BINDING SITE, designated SEQ ID:8560, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38312] Another function of GAM1338 is therefore inhibition of Formin binding protein 1 (FNBP1, Accession XP_052666.3) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FNBP1.

[38313] Fsh primary response (lrpr1 homolog, rat) 1 (FSHPRH1,

Accession NP_006724.1) is another GAM1338 target gene, herein designated TARGET GENE. FSHPRH1 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by FSHPRH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FSHPRH1 BINDING SITE, designated SEQ ID:13800, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38314] Another function of GAM1338 is therefore inhibition of Fsh primary response (lrpr1 homolog, rat) 1 (FSHPRH1, Accession NP_006724.1), a gene which is involved in the response of gonadal tissues to follicle- stimulating hormone. and therefore may be associated with Hypergonadotropic ovarian dysgenesis (odg), x- linked disorders of gonadal development. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Hypergonadotropic ovarian dysgenesis (odg), x- linked disorders of gonadal development, and of other diseases and clinical conditions associated with FSHPRH1.

[38315] The function of FSHPRH1 and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM189.1.Follistatin-like 1 (FSTL1, Accession NP_009016.1) is another GAM1338 target gene, herein designated TARGET GENE. FSTL1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by FSTL1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FSTL1 BINDING SITE, designated SEQ ID:3666, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38316] Another function of GAM1338 is therefore inhibition of Follistatin-like 1 (FSTL1, Accession NP_009016.1), a gene which may modulate the action of some growth factors on cell proliferation and differentiation. and therefore may be associated with Rheumatoid arthritis. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Rheumatoid arthritis., and of other diseases and clinical conditions associated with FSTL1.

[38317] The function of FSTL1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM279.1.Fucosyltransferase 1 (galactoside 2-alpha-l-fucosyltransferase, bombay phenotype included) (FUT1, Accession NP_000139.1) is another GAM1338 target gene, herein designated TARGET GENE. FUT1 BINDING SITE1 and FUT1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by FUT1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of FUT1 BINDING SITE1 and FUT1 BINDING SITE2, designated SEQ ID:3102 and SEQ ID:7472 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38318] Another function of GAM1338 is therefore inhibition of Fucosyltransferase 1 (galactoside 2-alpha-l-fucosyltransferase, bombay phenotype included) (FUT1, Accession NP_000139.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with FUT1.

[38319] Interferon, alpha-inducible protein (clone ifi-6-16) (G1P3, Accession NP_075011.1) is another GAM1338 target gene,

herein designated TARGET GENE. G1P3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by G1P3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of G1P3 BINDING SITE, designated SEQ ID:14496, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38320] Another function of GAM1338 is therefore inhibition of Interferon, alpha-inducible protein (clone ifi-6-16) (G1P3, Accession NP_075011.1), a gene which is an interferon-stimulated gene (ISG). Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with G1P3.

[38321] The function of G1P3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM234.1.Interferon, alpha-inducible protein (clone ifi-6-16) (G1P3, Accession NP_002029.3) is another GAM1338 target gene, herein designated TARGET GENE. G1P3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA en-

coded by G1P3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of G1P3 BINDING SITE, designated SEQ ID:14496, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38322] Another function of GAM1338 is therefore inhibition of Interferon, alpha-inducible protein (clone ifi-6-16) (G1P3, Accession NP_002029.3), a gene which is an interferon-stimulated gene (ISG). Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with G1P3.

[38323] The function of G1P3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM234.1.Interferon, alpha-inducible protein (clone ifi-6-16) (G1P3, Accession NP_075010.1) is another GAM1338 target gene, herein designated TARGET GENE. G1P3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by G1P3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of G1P3 BINDING SITE, designated SEQ ID:14496, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38324] Another function of GAM1338 is therefore inhibition of Interferon, alpha-inducible protein (clone ifi-6-16) (G1P3, Accession NP_075010.1), a gene which is an interferon-stimulated gene (ISG). Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with G1P3.

[38325] The function of G1P3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM234.1.G2A (Accession NP_037477.1) is another GAM1338 target gene, herein designated TARGET GENE. G2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by G2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of G2A BINDING SITE, designated SEQ ID:8834, to the nucleotide sequence of GAM1338 RNA, herein designated

GAM RNA, also designated SEQ ID:360.

[38326] Another function of GAM1338 is therefore inhibition of G2A (Accession NP_037477.1), a gene which may mediate some of the effects of extracellular atp on insulin secretion. and therefore may be associated with Autoimmune disease. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Autoimmune disease., and of other diseases and clinical conditions associated with G2A.

[38327] The function of G2A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Glucose-6-phosphatase, catalytic (glycogen storage disease type i, von gierke disease) (G6PC, Accession NP_000142.1) is another GAM1338 target gene, herein designated TARGET GENE. G6PC BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by G6PC, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of G6PC BINDING SITE, designated SEQ ID:8902, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:360.

[38328] Another function of GAM1338 is therefore inhibition of Glucose-6-phosphatase, catalytic (glycogen storage disease type i, von gierke disease) (G6PC, Accession NP_000142.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with G6PC.

[38329] GAL3ST-4 (Accession NP_078913.3) is another GAM1338 target gene, herein designated TARGET GENE. GAL3ST-4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GAL3ST-4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GAL3ST-4 BINDING SITE, designated SEQ ID:13405, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38330] Another function of GAM1338 is therefore inhibition of GAL3ST-4 (Accession NP_078913.3) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GAL3ST-4.

[38331] GBP4 (Accession NP_443173.2) is another GAM1338 tar-

get gene, herein designated TARGET GENE. GBP4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GBP4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GBP4 BINDING SITE, designated SEQ ID:12569, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38332] Another function of GAM1338 is therefore inhibition of GBP4 (Accession NP_443173.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GBP4.

[38333] Golgi associated, gamma adaptin ear containing, arf binding protein 2 (GGA2, Accession NP_619581.1) is another GAM1338 target gene, herein designated TARGET GENE. GGA2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GGA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GGA2 BINDING SITE, designated SEQ ID:520, to the nucleotide sequence of GAM1338 RNA,

herein designated GAM RNA, also designated SEQ ID:360.

[38334] Another function of GAM1338 is therefore inhibition of Golgi associated, gamma adaptin ear containing, arf binding protein 2 (GGA2, Accession NP_619581.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GGA2.

[38335] Golgi associated, gamma adaptin ear containing, arf binding protein 2 (GGA2, Accession NP_055859.1) is another GAM1338 target gene, herein designated TARGET GENE. GGA2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GGA2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GGA2 BINDING SITE, designated SEQ ID:520, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38336] Another function of GAM1338 is therefore inhibition of Golgi associated, gamma adaptin ear containing, arf binding protein 2 (GGA2, Accession NP_055859.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associ-

ated with GGA2.

[38337] Glucagon-like peptide 1 receptor (GLP1R, Accession NP_002053.2) is another GAM1338 target gene, herein designated TARGET GENE. GLP1R BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GLP1R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GLP1R BINDING SITE, designated SEQ ID:13842, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38338] Another function of GAM1338 is therefore inhibition of Glucagon-like peptide 1 receptor (GLP1R, Accession NP_002053.2), a gene which is mediated by g proteins which activate adenylyl cyclase. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GLP1R.

[38339] The function of GLP1R and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM385.2.Gm2 ganglioside activator protein (GM2A, Accession NP_000396.1) is another GAM1338 target gene,

herein designated TARGET GENE. GM2A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GM2A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GM2A BINDING SITE, designated SEQ ID:2518, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38340] Another function of GAM1338 is therefore inhibition of Gm2 ganglioside activator protein (GM2A, Accession NP_000396.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GM2A.

[38341] GNE (Accession NP_005467.1) is another GAM1338 target gene, herein designated TARGET GENE. GNE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GNE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GNE BINDING SITE, designated SEQ ID:7151, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also des-

ignated SEQ ID:360.

[38342] Another function of GAM1338 is therefore inhibition of GNE (Accession NP_005467.1), a gene which has roles in sialic acid biosynthesis and regulates cell surface sialylation. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNE.

[38343] The function of GNE and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.GNPNAT1 (Accession XP_085119.1) is another GAM1338 target gene, herein designated TARGET GENE. GNPNAT1 BINDING SITE1 and GNPNAT1 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GNPNAT1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GNPNAT1 BINDING SITE1 and GNPNAT1 BINDING SITE2, designated SEQ ID:19027 and SEQ ID:10643 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38344] Another function of GAM1338 is therefore inhibition of

GNPNAT1 (Accession XP_085119.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNPNAT1.

[38345] GNRPX (Accession NP_060519.1) is another GAM1338 target gene, herein designated TARGET GENE. GNRPX BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GNRPX, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GNRPX BINDING SITE, designated SEQ ID:17848, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38346] Another function of GAM1338 is therefore inhibition of GNRPX (Accession NP_060519.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GNRPX.

[38347] Golgi autoantigen, golgin subfamily a, 3 (GOLGA3, Accession NP_005886.2) is another GAM1338 target gene, herein designated TARGET GENE. GOLGA3 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GOLGA3, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GOLGA3 BINDING SITE, designated SEQ ID:9100, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38348] Another function of GAM1338 is therefore inhibition of Golgi autoantigen, golgin subfamily a, 3 (GOLGA3, Accession NP_005886.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GOLGA3.

[38349] Glycoprotein v (platelet) (GP5, Accession NP_004479.1) is another GAM1338 target gene, herein designated TARGET GENE. GP5 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GP5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GP5 BINDING SITE, designated SEQ ID:18832, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38350] Another function of GAM1338 is therefore inhibition of Glycoprotein v (platelet) (GP5, Accession NP_004479.1) .

Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GP5.

[38351] GPP34R (Accession NP_060648.2) is another GAM1338 target gene, herein designated TARGET GENE. GPP34R BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPP34R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPP34R BINDING SITE, designated SEQ ID:16162, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38352] Another function of GAM1338 is therefore inhibition of GPP34R (Accession NP_060648.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPP34R.

[38353] G protein-coupled receptor 114 (GPR114, Accession NP_722579.1) is another GAM1338 target gene, herein designated TARGET GENE. GPR114 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPR114, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or

BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR114 BINDING SITE, designated SEQ ID:13684, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38354] Another function of GAM1338 is therefore inhibition of G protein-coupled receptor 114 (GPR114, Accession NP_722579.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR114.

[38355] G protein-coupled receptor 26 (GPR26, Accession NP_703143.1) is another GAM1338 target gene, herein designated TARGET GENE. GPR26 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPR26, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR26 BINDING SITE, designated SEQ ID:9581, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38356] Another function of GAM1338 is therefore inhibition of G protein-coupled receptor 26 (GPR26, Accession

NP_703143.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR26.

[38357] G protein-coupled receptor 4 (GPR4, Accession NP_005273.1) is another GAM1338 target gene, herein designated TARGET GENE. GPR4 BINDING SITE1 and GPR4 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GPR4, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR4 BINDING SITE1 and GPR4 BINDING SITE2, designated SEQ ID:16936 and SEQ ID:15917 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38358] Another function of GAM1338 is therefore inhibition of G protein-coupled receptor 4 (GPR4, Accession NP_005273.1), a gene which stimulates to produce increased calcium by both SPC and LPC . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR4.

[38359] The function of GPR4 and its association with various dis-

eases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.G protein-coupled receptor 56 (GPR56, Accession NP_005673.2) is another GAM1338 target gene, herein designated TARGET GENE. GPR56 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GPR56, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR56 BINDING SITE, designated SEQ ID:6235, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38360] Another function of GAM1338 is therefore inhibition of G protein-coupled receptor 56 (GPR56, Accession NP_005673.2), a gene which transduces extracellular signals through heterotrimeric G proteins. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR56.

[38361] The function of GPR56 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference

to GAM63.1.G protein-coupled receptor 66 (GPR66, Accession NP_006047.2) is another GAM1338 target gene, herein designated TARGET GENE. GPR66 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPR66, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GPR66 BINDING SITE, designated SEQ ID:4149, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38362] Another function of GAM1338 is therefore inhibition of G protein-coupled receptor 66 (GPR66, Accession NP_006047.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR66.

[38363] G protein-coupled receptor 81 (GPR81, Accession NP_115943.1) is another GAM1338 target gene, herein designated TARGET GENE. GPR81 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GPR81, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the

nucleotide sequences of GPR81 BINDING SITE, designated SEQ ID:9012, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38364] Another function of GAM1338 is therefore inhibition of G protein-coupled receptor 81 (GPR81, Accession NP_115943.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GPR81.

[38365] GR6 (Accession NP_031380.1) is another GAM1338 target gene, herein designated TARGET GENE. GR6 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by GR6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GR6 BINDING SITE, designated SEQ ID:11621, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38366] Another function of GAM1338 is therefore inhibition of GR6 (Accession NP_031380.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GR6.

[38367] GRAF (Accession NP_055886.1) is another GAM1338 target gene, herein designated TARGET GENE. GRAF BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GRAF, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRAF BINDING SITE, designated SEQ ID:18118, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38368] Another function of GAM1338 is therefore inhibition of GRAF (Accession NP_055886.1), a gene which ia a GTPase activating protein for p21- rac and therefore may be associated with Juvenile myelomonocytic leukemia. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Juvenile myelomonocytic leukemia, and of other diseases and clinical conditions associated with GRAF.

[38369] The function of GRAF and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.GREB1 (Accession NP_055483.2) is another GAM1338 target gene, herein designated TARGET GENE.

GREB1 BINDING SITE1 and GREB1 BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by GREB1, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GREB1 BINDING SITE1 and GREB1 BINDING SITE2, designated SEQ ID:18182 and SEQ ID:2321 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38370] Another function of GAM1338 is therefore inhibition of GREB1 (Accession NP_055483.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GREB1.

[38371] Glutamate receptor, ionotropic, delta 1 (GRID1, Accession XP_043613.8) is another GAM1338 target gene, herein designated TARGET GENE. GRID1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GRID1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRID1 BINDING SITE, designated SEQ ID:12320, to the nucleotide sequence of GAM1338

RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38372] Another function of GAM1338 is therefore inhibition of Glutamate receptor, ionotropic, delta 1 (GRID1, Accession XP_043613.8) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRID1.

[38373] Glutamate receptor, ionotropic, n-methyl d-aspartate-like 1a (GRINL1A, Accession NP_056347.1) is another GAM1338 target gene, herein designated TARGET GENE. GRINL1A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GRINL1A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRINL1A BINDING SITE, designated SEQ ID:17379, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38374] Another function of GAM1338 is therefore inhibition of Glutamate receptor, ionotropic, n-methyl d-aspartate-like 1a (GRINL1A, Accession NP_056347.1), a gene which plays a role in the development and function of the mammalian brain. Accordingly, utilities of GAM1338 include diagno-

sis, prevention and treatment of diseases and clinical conditions associated with GRINL1A.

[38375] The function of GRINL1A and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Glutamate receptor, metabotropic 6 (GRM6, Accession NP_000834.1) is another GAM1338 target gene, herein designated TARGET GENE. GRM6 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GRM6, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRM6 BINDING SITE, designated SEQ ID:5942, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38376] Another function of GAM1338 is therefore inhibition of Glutamate receptor, metabotropic 6 (GRM6, Accession NP_000834.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRM6.

[38377] GRWD (Accession NP_113673.2) is another GAM1338 target gene, herein designated TARGET GENE. GRWD BIND-

ING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GRWD, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GRWD BINDING SITE, designated SEQ ID:6811, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38378] Another function of GAM1338 is therefore inhibition of GRWD (Accession NP_113673.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GRWD.

[38379] GSDM (Accession XP_209009.1) is another GAM1338 target gene, herein designated TARGET GENE. GSDM BINDING SITE1 and GSDM BINDING SITE2 are target binding sites found in untranslated regions of multiple transcripts of mRNA encoded by GSDM, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GSDM BINDING SITE1 and GSDM BINDING SITE2, designated SEQ ID:13197 and SEQ ID:3037 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:360.

[38380] Another function of GAM1338 is therefore inhibition of GSDM (Accession XP_209009.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GSDM.

[38381] GTF2IRD2 (Accession NP_775808.1) is another GAM1338 target gene, herein designated TARGET GENE. GTF2IRD2 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GTF2IRD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GTF2IRD2 BINDING SITE, designated SEQ ID:3107, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38382] Another function of GAM1338 is therefore inhibition of GTF2IRD2 (Accession NP_775808.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GTF2IRD2.

[38383] GTF2IRD2 (Accession NP_115579.3) is another GAM1338 target gene, herein designated TARGET GENE. GTF2IRD2

BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by GTF2IRD2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GTF2IRD2 BINDING SITE, designated SEQ ID:3107, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38384] Another function of GAM1338 is therefore inhibition of GTF2IRD2 (Accession NP_115579.3) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GTF2IRD2.

[38385] GTPBG3 (Accession NP_116009.1) is another GAM1338 target gene, herein designated TARGET GENE. GTPBG3 BINDING SITE1 and GTPBG3 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by GTPBG3, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GTPBG3 BINDING SITE1 and GTPBG3 BINDING SITE2, designated SEQ ID:15596 and SEQ

ID:7742 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38386] Another function of GAM1338 is therefore inhibition of GTPBG3 (Accession NP_116009.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GTPBG3.

[38387] Glycogenin (GYG, Accession NP_004121.2) is another GAM1338 target gene, herein designated TARGET GENE. GYG BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by GYG, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of GYG BINDING SITE, designated SEQ ID:10290, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38388] Another function of GAM1338 is therefore inhibition of Glycogenin (GYG, Accession NP_004121.2), a gene which primes de novo glycogen synthesis. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with GYG.

[38389] The function of GYG and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.H-plk (Accession NP_056936.1) is another GAM1338 target gene, herein designated TARGET GENE. H-plk BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by H-plk, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of H-plk BINDING SITE, designated SEQ ID:8288, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38390] Another function of GAM1338 is therefore inhibition of H-plk (Accession NP_056936.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with H-plk.

[38391] H63 (Accession NP_816929.1) is another GAM1338 target gene, herein designated TARGET GENE. H63 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by H63, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4

illustrates the complementarity of the nucleotide sequences of H63 BINDING SITE, designated SEQ ID:2008, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38392] Another function of GAM1338 is therefore inhibition of H63 (Accession NP_816929.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with H63.

[38393] H63 (Accession NP_612432.2) is another GAM1338 target gene, herein designated TARGET GENE. H63 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by H63, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of H63 BINDING SITE, designated SEQ ID:2008, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38394] Another function of GAM1338 is therefore inhibition of H63 (Accession NP_612432.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with H63.

[38395] Hepatitis a virus cellular receptor 2 (HAVCR2, Accession

NP_116171.2) is another GAM1338 target gene, herein designated TARGET GENE. HAVCR2 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HAVCR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HAVCR2 BINDING SITE, designated SEQ ID:16518, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38396] Another function of GAM1338 is therefore inhibition of Hepatitis a virus cellular receptor 2 (HAVCR2, Accession NP_116171.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HAVCR2.

[38397] HE9 (Accession NP_741997.1) is another GAM1338 target gene, herein designated TARGET GENE. HE9 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HE9, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HE9 BINDING SITE, designated SEQ ID:13755, to the nucleotide se-

quence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38398] Another function of GAM1338 is therefore inhibition of HE9 (Accession NP_741997.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HE9.

[38399] HECA (Accession NP_057301.1) is another GAM1338 target gene, herein designated TARGET GENE. HECA BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HECA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HECA BINDING SITE, designated SEQ ID:6145, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38400] Another function of GAM1338 is therefore inhibition of HECA (Accession NP_057301.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HECA.

[38401] HEMK (Accession NP_057257.1) is another GAM1338 target gene, herein designated TARGET GENE. HEMK BINDING SITE is a target binding site found in the 3` untranslated

region of mRNA encoded by HEMK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HEMK BINDING SITE, designated SEQ ID:12517, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38402] Another function of GAM1338 is therefore inhibition of HEMK (Accession NP_057257.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HEMK.

[38403] Hephaestin (HEPH, Accession NP_055614.1) is another GAM1338 target gene, herein designated TARGET GENE. HEPH BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by HEPH, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HEPH BINDING SITE, designated SEQ ID:4303, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38404] Another function of GAM1338 is therefore inhibition of

Hephaestin (HEPH, Accession NP_055614.1), a gene which is thought to be a membrane- bound protein responsible for transport of dietary iron from epithelial cells of the intestinal lumen into the circulatory system. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HEPH.

[38405] The function of HEPH and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Holocarboxylase synthetase (biotin-[proprionyl-coenzyme a-carboxylase (atp-hydrolysing)] ligase) (HLCS, Accession NP_000402.2) is another GAM1338 target gene, herein designated TARGET GENE. HLCS BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HLCS, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HLCS BINDING SITE, designated SEQ ID:10628, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38406] Another function of GAM1338 is therefore inhibition of

Holocarboxylase synthetase (biotin-[proprionyl-coenzyme a-carboxylase (atp-hydrolysing)] ligase) (HLCS, Accession NP_000402.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HLCS.

[38407] High-mobility group 20a (HMG20A, Accession NP_060670.1) is another GAM1338 target gene, herein designated TARGET GENE. HMG20A BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HMG20A, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HMG20A BINDING SITE, designated SEQ ID:19141, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38408] Another function of GAM1338 is therefore inhibition of High-mobility group 20a (HMG20A, Accession NP_060670.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HMG20A.

[38409] HPRN (Accession NP_071938.1) is another GAM1338 target gene, herein designated TARGET GENE. HPRN BINDING

SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HPRN, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HPRN BINDING SITE, designated SEQ ID:11574, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38410] Another function of GAM1338 is therefore inhibition of HPRN (Accession NP_071938.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HPRN.

[38411] Histamine receptor h4 (HRH4, Accession NP_067637.2) is another GAM1338 target gene, herein designated TARGET GENE. HRH4 BINDING SITE1 through HRH4 BINDING SITE3 are target binding sites found in untranslated regions of mRNA encoded by HRH4, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HRH4 BINDING SITE1 through HRH4 BINDING SITE3, designated SEQ ID:12079, SEQ ID:14595 and SEQ ID:5920 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA,

also designated SEQ ID:360.

[38412] Another function of GAM1338 is therefore inhibition of Histamine receptor h4 (HRH4, Accession NP_067637.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HRH4.

[38413] HSD3B7 (Accession NP_079469.2) is another GAM1338 target gene, herein designated TARGET GENE. HSD3B7 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HSD3B7, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSD3B7 BINDING SITE, designated SEQ ID:16293, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38414] Another function of GAM1338 is therefore inhibition of HSD3B7 (Accession NP_079469.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSD3B7.

[38415] HSMPP8 (Accession XP_167894.1) is another GAM1338 target gene, herein designated TARGET GENE. HSMPP8

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HSMPP8, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSMPP8 BINDING SITE, designated SEQ ID:19749, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38416] Another function of GAM1338 is therefore inhibition of HSMPP8 (Accession XP_167894.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSMPP8.

[38417] HSPC065 (Accession NP_054876.2) is another GAM1338 target gene, herein designated TARGET GENE. HSPC065 BINDING SITE1 and HSPC065 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by HSPC065, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HSPC065 BINDING SITE1 and HSPC065 BINDING SITE2, designated SEQ ID:7511 and SEQ ID:10877 respectively, to the nucleotide sequence of

GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38418] Another function of GAM1338 is therefore inhibition of HSPC065 (Accession NP_054876.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HSPC065.

[38419] 5-hydroxytryptamine (serotonin) receptor 1d (HTR1D, Accession NP_000855.1) is another GAM1338 target gene, herein designated TARGET GENE. HTR1D BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HTR1D, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HTR1D BINDING SITE, designated SEQ ID:14604, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38420] Another function of GAM1338 is therefore inhibition of 5-hydroxytryptamine (serotonin) receptor 1d (HTR1D, Accession NP_000855.1), a gene which belongs to g- protein coupled receptor. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases

and clinical conditions associated with HTR1D.

[38421] The function of HTR1D and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.5-hydroxytryptamine (serotonin) receptor 1e (HTR1E, Accession NP_000856.1) is another GAM1338 target gene, herein designated TARGET GENE. HTR1E BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HTR1E, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HTR1E BINDING SITE, designated SEQ ID:9063, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38422] Another function of GAM1338 is therefore inhibition of 5-hydroxytryptamine (serotonin) receptor 1e (HTR1E, Accession NP_000856.1), a gene which belongs to g- protein coupled receptors. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HTR1E.

[38423] The function of HTR1E and its association with various diseases and clinical conditions, has been established by

previous studies, as described hereinabove with reference to GAM161.1.Hormonally upregulated neu-associated kinase (HUNK, Accession NP_055401.1) is another GAM1338 target gene, herein designated TARGET GENE. HUNK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HUNK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HUNK BINDING SITE, designated SEQ ID:1413, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38424] Another function of GAM1338 is therefore inhibition of Hormonally upregulated neu-associated kinase (HUNK, Accession NP_055401.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HUNK.

[38425] Hus1 checkpoint homolog (s. pombe) (HUS1, Accession NP_004498.1) is another GAM1338 target gene, herein designated TARGET GENE. HUS1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by HUS1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III

of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HUS1 BINDING SITE, designated SEQ ID:11161, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38426] Another function of GAM1338 is therefore inhibition of Hus1 checkpoint homolog (s. pombe) (HUS1, Accession NP_004498.1), a gene which May form DNA damage- responsive protein complex . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HUS1.

[38427] The function of HUS1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Hyaluronoglucosaminidase 4 (HYAL4, Accession NP_036401.1) is another GAM1338 target gene, herein designated TARGET GENE. HYAL4 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by HYAL4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of HYAL4 BINDING SITE, designated SEQ ID:19431, to the nucleotide se-

quence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38428] Another function of GAM1338 is therefore inhibition of Hyaluronoglucosaminidase 4 (HYAL4, Accession NP_036401.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with HYAL4.

[38429] Intercellular adhesion molecule 1 (cd54), human rhinovirus receptor (ICAM1, Accession NP_000192.1) is another GAM1338 target gene, herein designated TARGET GENE. ICAM1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by ICAM1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ICAM1 BINDING SITE, designated SEQ ID:18182, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38430] Another function of GAM1338 is therefore inhibition of Intercellular adhesion molecule 1 (cd54), human rhinovirus receptor (ICAM1, Accession NP_000192.1), a gene which binds the integrin LFA- 1 (ITGB2) and promotes adhesion; member of the immunoglobulin superfamily and

therefore may be associated with Malaria, cerebral, susceptibility to. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Malaria, cerebral, susceptibility to, and of other diseases and clinical conditions associated with ICAM1.

[38431] The function of ICAM1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.ICK (Accession NP_055735.1) is another GAM1338 target gene, herein designated TARGET GENE. ICK BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ICK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ICK BINDING SITE, designated SEQ ID:3106, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38432] Another function of GAM1338 is therefore inhibition of ICK (Accession NP_055735.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ICK.

[38433] ICK (Accession NP_057597.2) is another GAM1338 target

gene, herein designated TARGET GENE. ICK BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by ICK, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ICK BINDING SITE, designated SEQ ID:3106, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38434] Another function of GAM1338 is therefore inhibition of ICK (Accession NP_057597.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ICK.

[38435] Insulin-like growth factor 1 (somatomedin c) (IGF1, Accession NP_000609.1) is another GAM1338 target gene, herein designated TARGET GENE. IGF1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IGF1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IGF1 BINDING SITE, designated SEQ ID:8230, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:360.

[38436] Another function of GAM1338 is therefore inhibition of Insulin-like growth factor 1 (somatomedin c) (IGF1, Accession NP_000609.1), a gene which are structurally and functionally related to insulin but have a much higher growth- promoting activity and therefore may be associated with Growth retardation with sensorineural deafness and mental retardation. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Growth retardation with sensorineural deafness and mental retardation, and of other diseases and clinical conditions associated with IGF1.

[38437] The function of IGF1 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.2.Interleukin 11 (IL11, Accession NP_000632.1) is another GAM1338 target gene, herein designated TARGET GENE. IL11 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IL11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL11 BINDING SITE, designated SEQ ID:17785,

to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38438] Another function of GAM1338 is therefore inhibition of Interleukin 11 (IL11, Accession NP_000632.1), a gene which stimulates the proliferation of hematopoietic stem cells and megakaryocyte progenitor cells and induces megakaryocyte maturation. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL11.

[38439] The function of IL11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM41.1.Interleukin 16 (lymphocyte chemoattractant factor) (IL16, Accession NP_757366.1) is another GAM1338 target gene, herein designated TARGET GENE. IL16 BINDING SITE is a target binding site found in the 5` untranslated region of multiple transcripts of mRNA encoded by IL16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL16 BINDING SITE, designated SEQ ID:11272, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38440] Another function of GAM1338 is therefore inhibition of Interleukin 16 (lymphocyte chemoattractant factor) (IL16, Accession NP_757366.1), a gene which modulates T- cell activation. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL16.

[38441] The function of IL16 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM66.1.Interleukin 21 receptor (IL21R, Accession NP_851564.1) is another GAM1338 target gene, herein designated TARGET GENE. IL21R BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IL21R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL21R BINDING SITE, designated SEQ ID:2012, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38442] Another function of GAM1338 is therefore inhibition of Interleukin 21 receptor (IL21R, Accession NP_851564.1), a gene which is involved in receptor mediated endocytosis

and transduces the mitogenic signals of il- 2. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL21R.

[38443] The function of IL21R and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM69.2.Interleukin 21 receptor (IL21R, Accession NP_068570.1) is another GAM1338 target gene, herein designated TARGET GENE. IL21R BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IL21R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL21R BINDING SITE, designated SEQ ID:2012, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38444] Another function of GAM1338 is therefore inhibition of Interleukin 21 receptor (IL21R, Accession NP_068570.1), a gene which is involved in receptor mediated endocytosis and transduces the mitogenic signals of il- 2. Accordingly, utilities of GAM1338 include diagnosis, prevention and

treatment of diseases and clinical conditions associated with IL21R.

[38445] The function of IL21R and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM69.2.Interleukin 21 receptor (IL21R, Accession NP_851565.1) is another GAM1338 target gene, herein designated TARGET GENE. IL21R BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IL21R, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL21R BINDING SITE, designated SEQ ID:2012, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38446] Another function of GAM1338 is therefore inhibition of Interleukin 21 receptor (IL21R, Accession NP_851565.1), a gene which is involved in receptor mediated endocytosis and transduces the mitogenic signals of il- 2. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL21R.

[38447] The function of IL21R and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM69.2.Interleukin 28 receptor, alpha (IL28RA, Accession NP_775088.1) is another GAM1338 target gene, herein designated TARGET GENE. IL28RA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IL28RA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL28RA BINDING SITE, designated SEQ ID:17486, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38448] Another function of GAM1338 is therefore inhibition of Interleukin 28 receptor, alpha (IL28RA, Accession NP_775088.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL28RA.

[38449] Interleukin 28 receptor, alpha (IL28RA, Accession NP_734464.1) is another GAM1338 target gene, herein designated TARGET GENE. IL28RA BINDING SITE is a target binding site found in the 3` untranslated region of multi-

ple transcripts of mRNA encoded by IL28RA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL28RA BINDING SITE, designated SEQ ID:17486, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38450] Another function of GAM1338 is therefore inhibition of Interleukin 28 receptor, alpha (IL28RA, Accession NP_734464.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL28RA.

[38451] Interleukin 28 receptor, alpha (IL28RA, Accession NP_775087.1) is another GAM1338 target gene, herein designated TARGET GENE. IL28RA BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by IL28RA, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IL28RA BINDING SITE, designated SEQ ID:17486, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38452] Another function of GAM1338 is therefore inhibition of Interleukin 28 receptor, alpha (IL28RA, Accession NP_775087.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IL28RA.

[38453] IMPACT (Accession NP_060909.1) is another GAM1338 target gene, herein designated TARGET GENE. IMPACT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IMPACT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IMPACT BINDING SITE, designated SEQ ID:19846, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38454] Another function of GAM1338 is therefore inhibition of IMPACT (Accession NP_060909.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IMPACT.

[38455] Imp (inosine monophosphate) dehydrogenase 1 (IMPDH1, Accession NP_000874.1) is another GAM1338 target gene, herein designated TARGET GENE. IMPDH1 BINDING SITE is a target binding site found in the 5` untranslated region

of mRNA encoded by IMPDH1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IMPDH1 BINDING SITE, designated SEQ ID:15608, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38456] Another function of GAM1338 is therefore inhibition of Imp (inosine monophosphate) dehydrogenase 1 (IMPDH1, Accession NP_000874.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IMPDH1.

[38457] INHBE (Accession NP_113667.1) is another GAM1338 target gene, herein designated TARGET GENE. INHBE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by INHBE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of INHBE BINDING SITE, designated SEQ ID:9633, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38458] Another function of GAM1338 is therefore inhibition of

INHBE (Accession NP_113667.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with INHBE.

[38459] Indolethylamine n-methyltransferase (INMT, Accession NP_006765.3) is another GAM1338 target gene, herein designated TARGET GENE. INMT BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by INMT, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of INMT BINDING SITE, designated SEQ ID:3109, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38460] Another function of GAM1338 is therefore inhibition of Indolethylamine n-methyltransferase (INMT, Accession NP_006765.3) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with INMT.

[38461] Interferon regulatory factor 4 (IRF4, Accession NP_002451.1) is another GAM1338 target gene, herein designated TARGET GENE. IRF4 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA

encoded by IRF4, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IRF4 BINDING SITE, designated SEQ ID:16311, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38462] Another function of GAM1338 is therefore inhibition of Interferon regulatory factor 4 (IRF4, Accession NP_002451.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IRF4.

[38463] IRTA1 (Accession NP_112572.1) is another GAM1338 target gene, herein designated TARGET GENE. IRTA1 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by IRTA1, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IRTA1 BINDING SITE, designated SEQ ID:18021, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38464] Another function of GAM1338 is therefore inhibition of

IRTA1 (Accession NP_112572.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IRTA1.

[38465] Iroquois homeobox protein 5 (IRX5, Accession NP_005844.1) is another GAM1338 target gene, herein designated TARGET GENE. IRX5 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by IRX5, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of IRX5 BINDING SITE, designated SEQ ID:5486, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38466] Another function of GAM1338 is therefore inhibition of Iroquois homeobox protein 5 (IRX5, Accession NP_005844.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with IRX5.

[38467] Inositol 1,4,5-triphosphate receptor, type 2 (ITPR2, Accession NP_002214.1) is another GAM1338 target gene, herein designated TARGET GENE. ITPR2 BINDING SITE is a target binding site found in the 3` untranslated region of

mRNA encoded by ITPR2, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of ITPR2 BINDING SITE, designated SEQ ID:2513, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38468] Another function of GAM1338 is therefore inhibition of Inositol 1,4,5-triphosphate receptor, type 2 (ITPR2, Accession NP_002214.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with ITPR2.

[38469] Janus kinase 3 (a protein tyrosine kinase, leukocyte) (JAK3, Accession NP_000206.1) is another GAM1338 target gene, herein designated TARGET GENE. JAK3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by JAK3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of JAK3 BINDING SITE, designated SEQ ID:6262, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38470] Another function of GAM1338 is therefore inhibition of Janus kinase 3 (a protein tyrosine kinase, leukocyte) (JAK3, Accession NP_000206.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with JAK3.

[38471] JM11 (Accession NP_296375.1) is another GAM1338 target gene, herein designated TARGET GENE. JM11 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by JM11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of JM11 BINDING SITE, designated SEQ ID:15361, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38472] Another function of GAM1338 is therefore inhibition of JM11 (Accession NP_296375.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with JM11.

[38473] Jerky homolog (mouse) (JRK, Accession NP_003715.1) is another GAM1338 target gene, herein designated TARGET GENE. JRK BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by JRK, cor-

responding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of JRK BINDING SITE, designated SEQ ID:1529, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38474] Another function of GAM1338 is therefore inhibition of Jerky homolog (mouse) (JRK, Accession NP_003715.1), a gene which might function as a DNA- binding protein. and therefore may be associated with Absence epilepsy. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Absence epilepsy, and of other diseases and clinical conditions associated with JRK.

[38475] The function of JRK and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM65.2.Potassium voltage-gated channel, isk-related family, member 3 (KCNE3, Accession NP_005463.1) is another GAM1338 target gene, herein designated TARGET GENE. KCNE3 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KCNE3, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of

Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNE3 BINDING SITE, designated SEQ ID:6918, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38476] Another function of GAM1338 is therefore inhibition of Potassium voltage-gated channel, isk-related family, member 3 (KCNE3, Accession NP_005463.1), a gene which ancillary protein that co- assemble with a potassium channel alpha- subunit to modulate the gating kinetics and enhance stability of the multimeric complex (by similarity). and therefore may be associated with Hypokalemic periodic paralysis. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Hypokalemic periodic paralysis, and of other diseases and clinical conditions associated with KCNE3.

[38477] The function of KCNE3 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM234.1.Potassium inwardly-rectifying channel, subfamily j, member 11 (KCNJ11, Accession NP_000516.2) is another GAM1338 target gene, herein designated TARGET GENE. KCNJ11 BINDING SITE is a target binding site found

in the 5` untranslated region of mRNA encoded by KCNJ11, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNJ11 BINDING SITE, designated SEQ ID:9100, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38478] Another function of GAM1338 is therefore inhibition of Potassium inwardly-rectifying channel, subfamily j, member 11 (KCNJ11, Accession NP_000516.2), a gene which is controlled by g proteins. inward rectifier k+ channels are characterized by a greater tendancy to allow potassium to flow into the cell rather than out of it. and therefore is associated with Persistent hyperinsulinemic hypoglycemia of infancy. Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of Persistent hyperinsulinemic hypoglycemia of infancy, and of other diseases and clinical conditions associated with KCNJ11.

[38479] The function of KCNJ11 and its association with various diseases and clinical conditions, has been established by previous studies, as described hereinabove with reference to GAM189.1.Potassium inwardly-rectifying channel, sub-

family j, member 16 (KCNJ16, Accession NP_061128.1) is another GAM1338 target gene, herein designated TARGET GENE. KCNJ16 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KCNJ16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNJ16 BINDING SITE, designated SEQ ID:10579, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38480] Another function of GAM1338 is therefore inhibition of Potassium inwardly-rectifying channel, subfamily j, member 16 (KCNJ16, Accession NP_061128.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNJ16.

[38481] Potassium inwardly-rectifying channel, subfamily j, member 16 (KCNJ16, Accession NP_733938.1) is another GAM1338 target gene, herein designated TARGET GENE. KCNJ16 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KCNJ16, corresponding to a target binding

site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNJ16 BINDING SITE, designated SEQ ID:10579, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38482] Another function of GAM1338 is therefore inhibition of Potassium inwardly-rectifying channel, subfamily j, member 16 (KCNJ16, Accession NP_733938.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNJ16.

[38483] Potassium inwardly-rectifying channel, subfamily j, member 16 (KCNJ16, Accession NP_733937.1) is another GAM1338 target gene, herein designated TARGET GENE. KCNJ16 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KCNJ16, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KCNJ16 BINDING SITE, designated SEQ ID:10579, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also desig-

nated SEQ ID:360.

[38484] Another function of GAM1338 is therefore inhibition of Potassium inwardly-rectifying channel, subfamily j, member 16 (KCNJ16, Accession NP_733937.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KCNJ16.

[38485] KENAE (Accession NP_789786.1) is another GAM1338 target gene, herein designated TARGET GENE. KENAE BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KENAE, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KENAE BINDING SITE, designated SEQ ID:18180, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38486] Another function of GAM1338 is therefore inhibition of KENAE (Accession NP_789786.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KENAE.

[38487] KIAA0063 (Accession NP_055691.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0063

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0063, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0063 BINDING SITE, designated SEQ ID:13142, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38488] Another function of GAM1338 is therefore inhibition of KIAA0063 (Accession NP_055691.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0063.

[38489] KIAA0087 (Accession NP_055584.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0087 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0087, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0087 BINDING SITE, designated SEQ ID:14875, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38490] Another function of GAM1338 is therefore inhibition of KIAA0087 (Accession NP_055584.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0087.

[38491] KIAA0117 (Accession XP_290939.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0117 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0117, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0117 BINDING SITE, designated SEQ ID:1353, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38492] Another function of GAM1338 is therefore inhibition of KIAA0117 (Accession XP_290939.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0117.

[38493] KIAA0182 (Accession XP_050495.4) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0182 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by KIAA0182, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0182 BINDING SITE, designated SEQ ID:2720, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38494] Another function of GAM1338 is therefore inhibition of KIAA0182 (Accession XP_050495.4) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0182.

[38495] KIAA0186 (Accession NP_066545.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0186 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0186, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0186 BINDING SITE, designated SEQ ID:6841, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38496] Another function of GAM1338 is therefore inhibition of

KIAA0186 (Accession NP_066545.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0186.

[38497] KIAA0205 (Accession NP_055688.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0205 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0205, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0205 BINDING SITE, designated SEQ ID:17371, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38498] Another function of GAM1338 is therefore inhibition of KIAA0205 (Accession NP_055688.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0205.

[38499] KIAA0237 (Accession NP_055562.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0237 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0237, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0237 BINDING SITE, designated SEQ ID:4878, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38500] Another function of GAM1338 is therefore inhibition of KIAA0237 (Accession NP_055562.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0237.

[38501] KIAA0295 (Accession XP_042833.2) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0295 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0295, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0295 BINDING SITE, designated SEQ ID:19689, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38502] Another function of GAM1338 is therefore inhibition of KIAA0295 (Accession XP_042833.2) . Accordingly, utilities

of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0295.

[38503] KIAA0435 (Accession NP_055616.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0435 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA0435, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0435 BINDING SITE, designated SEQ ID:14441, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38504] Another function of GAM1338 is therefore inhibition of KIAA0435 (Accession NP_055616.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0435.

[38505] KIAA0446 (Accession XP_044155.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0446 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA0446, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0446 BINDING SITE, designated SEQ ID:20115, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38506] Another function of GAM1338 is therefore inhibition of KIAA0446 (Accession XP_044155.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0446.

[38507] KIAA0459 (Accession XP_027862.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0459 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0459, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0459 BINDING SITE, designated SEQ ID:3442, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38508] Another function of GAM1338 is therefore inhibition of KIAA0459 (Accession XP_027862.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with KIAA0459.

[38509] KIAA0469 (Accession NP_055666.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0469 BINDING SITE1 and KIAA0469 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA0469, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0469 BINDING SITE1 and KIAA0469 BINDING SITE2, designated SEQ ID:14283 and SEQ ID:1413 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38510] Another function of GAM1338 is therefore inhibition of KIAA0469 (Accession NP_055666.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0469.

[38511] KIAA0475 (Accession NP_055679.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0475 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0475, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0475 BINDING SITE, designated SEQ ID:7946, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38512] Another function of GAM1338 is therefore inhibition of KIAA0475 (Accession NP_055679.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0475.

[38513] KIAA0493 (Accession XP_034717.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0493 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA0493, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0493 BINDING SITE, designated SEQ ID:6597, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38514] Another function of GAM1338 is therefore inhibition of KIAA0493 (Accession XP_034717.1) . Accordingly, utilities

of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0493.

[38515] KIAA0513 (Accession NP_055547.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0513 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0513, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0513 BINDING SITE, designated SEQ ID:11210, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38516] Another function of GAM1338 is therefore inhibition of KIAA0513 (Accession NP_055547.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0513.

[38517] KIAA0527 (Accession XP_171054.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0527 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0527, corresponding to a target binding site such as BINDING SITE I,

BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0527 BINDING SITE, designated SEQ ID:19044, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38518] Another function of GAM1338 is therefore inhibition of KIAA0527 (Accession XP_171054.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0527.

[38519] KIAA0555 (Accession NP_055605.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0555 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0555, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0555 BINDING SITE, designated SEQ ID:19623, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38520] Another function of GAM1338 is therefore inhibition of KIAA0555 (Accession NP_055605.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment

of diseases and clinical conditions associated with KIAA0555.

[38521] KIAA0561 (Accession XP_038150.2) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0561 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0561, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0561 BINDING SITE, designated SEQ ID:12972, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38522] Another function of GAM1338 is therefore inhibition of KIAA0561 (Accession XP_038150.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0561.

[38523] KIAA0562 (Accession NP_055519.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0562 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0562, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of KIAA0562 BINDING SITE, designated SEQ ID:10458, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38524] Another function of GAM1338 is therefore inhibition of KIAA0562 (Accession NP_055519.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0562.

[38525] KIAA0563 (Accession NP_055649.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0563 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA0563, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0563 BINDING SITE, designated SEQ ID:19679, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38526] Another function of GAM1338 is therefore inhibition of KIAA0563 (Accession NP_055649.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with

KIAA0563.

[38527] KIAA0682 (Accession NP_055667.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0682 BINDING SITE is a target binding site found in the 3` untranslated region of multiple transcripts of mRNA encoded by KIAA0682, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0682 BINDING SITE, designated SEQ ID:2671, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38528] Another function of GAM1338 is therefore inhibition of KIAA0682 (Accession NP_055667.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0682.

[38529] KIAA0831 (Accession NP_055739.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0831 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0831, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illus-

trates the complementarity of the nucleotide sequences of KIAA0831 BINDING SITE, designated SEQ ID:16264, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38530] Another function of GAM1338 is therefore inhibition of KIAA0831 (Accession NP_055739.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0831.

[38531] KIAA0841 (Accession XP_049237.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0841 BINDING SITE1 and KIAA0841 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA0841, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0841 BINDING SITE1 and KIAA0841 BINDING SITE2, designated SEQ ID:1519 and SEQ ID:901 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38532] Another function of GAM1338 is therefore inhibition of KIAA0841 (Accession XP_049237.1) . Accordingly, utilities

of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0841.

[38533] KIAA0861 (Accession NP_055893.2) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0861 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0861, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0861 BINDING SITE, designated SEQ ID:10629, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38534] Another function of GAM1338 is therefore inhibition of KIAA0861 (Accession NP_055893.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0861.

[38535] KIAA0924 (Accession NP_055712.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0924 BINDING SITE1 and KIAA0924 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA0924, corresponding to target binding sites

such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0924 BINDING SITE1 and KIAA0924 BINDING SITE2, designated SEQ ID:19935 and SEQ ID:864 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38536] Another function of GAM1338 is therefore inhibition of KIAA0924 (Accession NP_055712.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0924.

[38537] KIAA0935 (Accession XP_052620.6) is another GAM1338 target gene, herein designated TARGET GENE. KIAA0935 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA0935, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA0935 BINDING SITE, designated SEQ ID:10957, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38538] Another function of GAM1338 is therefore inhibition of

KIAA0935 (Accession XP_052620.6) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA0935.

[38539] KIAA1002 (Accession XP_290584.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA1002 BINDING SITE1 and KIAA1002 BINDING SITE2 are target binding sites found in untranslated regions of mRNA encoded by KIAA1002, corresponding to target binding sites such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1002 BINDING SITE1 and KIAA1002 BINDING SITE2, designated SEQ ID:12518 and SEQ ID:8660 respectively, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38540] Another function of GAM1338 is therefore inhibition of KIAA1002 (Accession XP_290584.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1002.

[38541] KIAA1040 (Accession XP_051091.3) is another GAM1338 target gene, herein designated TARGET GENE. KIAA1040

BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1040, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1040 BINDING SITE, designated SEQ ID:5138, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38542] Another function of GAM1338 is therefore inhibition of KIAA1040 (Accession XP_051091.3) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1040.

[38543] KIAA1041 (Accession NP_055762.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA1041 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1041, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1041 BINDING SITE, designated SEQ ID:11112, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38544] Another function of GAM1338 is therefore inhibition of KIAA1041 (Accession NP_055762.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1041.

[38545] KIAA1052 (Accession NP_055771.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA1052 BINDING SITE is a target binding site found in the 5` untranslated region of mRNA encoded by KIAA1052, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1052 BINDING SITE, designated SEQ ID:1530, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38546] Another function of GAM1338 is therefore inhibition of KIAA1052 (Accession NP_055771.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1052.

[38547] KIAA1054 (Accession XP_043493.5) is another GAM1338 target gene, herein designated TARGET GENE. KIAA1054 BINDING SITE is a target binding site found in the 3` un-

translated region of mRNA encoded by KIAA1054, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1054 BINDING SITE, designated SEQ ID:7973, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38548] Another function of GAM1338 is therefore inhibition of KIAA1054 (Accession XP_043493.5) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1054.

[38549] KIAA1128 (Accession NP_061872.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA1128 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1128, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1128 BINDING SITE, designated SEQ ID:8868, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38550] Another function of GAM1338 is therefore inhibition of

KIAA1128 (Accession NP_061872.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1128.

[38551] KIAA1143 (Accession XP_044014.1) is another GAM1338 target gene, herein designated TARGET GENE. KIAA1143 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1143, corresponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1143 BINDING SITE, designated SEQ ID:13800, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38552] Another function of GAM1338 is therefore inhibition of KIAA1143 (Accession XP_044014.1) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1143.

[38553] KIAA1155 (Accession XP_030864.2) is another GAM1338 target gene, herein designated TARGET GENE. KIAA1155 BINDING SITE is a target binding site found in the 3` untranslated region of mRNA encoded by KIAA1155, corre-

sponding to a target binding site such as BINDING SITE I, BINDING SITE II or BINDING SITE III of Fig.8. Table 4 illustrates the complementarity of the nucleotide sequences of KIAA1155 BINDING SITE, designated SEQ ID:5405, to the nucleotide sequence of GAM1338 RNA, herein designated GAM RNA, also designated SEQ ID:360.

[38554] Another function of GAM1338 is therefore inhibition of KIAA1155 (Accession XP_030864.2) . Accordingly, utilities of GAM1338 include diagnosis, prevention and treatment of diseases and clinical conditions associated with KIAA1155.
